

# 7 of 10

---

The Zetas started describing progress towards the Pole shift on a scale of 1-10 in [March 2008](#) (starting at a 2-3) and afterwards were asked for [updates](#) on the progression as we slowly moved up to a 6 and [beyond](#). At the end of 2009 Nancy recalled a [holographic presentation](#) given to her during a visit which gave the first indications of what to expect during a 7 out of 10, that [at least one](#) of the events would occur in 2010 and what effect this might have on [plans being made](#), the [population in general](#) and the [economy](#). They advised what [causes](#) the 7 out of 10 scenarios and whether governments will become more [open](#) and [warn](#) their citizens and what would happen to the [cover-up](#); also that [anxiety](#) would increase and that people are still in [denial](#) about what it all means for them.

After [hints](#) regarding timing of the events, the Zetas disclosed detailed [information](#) on what will occur and explained [why the release](#) of information, revealing that the event expected before the end of 2010 was the sinking of the Indonesian tongue of the Eurasian plate. People were still [sceptical](#) about the prediction or [angry](#) when things didn't happen as expected. Others worried about being [cut off](#) from Zetatalk, [nuclear reactor accidents](#) and [skyscrapers collapsing](#).

In Indonesia, precursors were noted on the [eastern side](#) of the Indo-Australian Plate and in [Bangkok](#) among others. UFOs were seen in [China](#) and [Taiwan](#), warning of what was coming, while the major leaders [resisted](#) taking the message seriously. The Zetas gave warnings for [Singapore](#), the [Philippines](#), [India](#), [Hong Kong](#), the [Mentawai Islands](#) and the [Bonin Islands](#). They also advised of the possibility of [tsunami](#) occurring or China [suppressing their media](#) but said that [volcanoes](#) would not increase in activity more than they already have. They also provided [detailed information](#) on how much sinking would occur across the plate and more fully explained the [folding Pacific](#).

For South America, the Zetas have described what the [continent](#) can expect, whether any [tsunami](#) will occur and which [major cities](#) will be affected, along with predictions for the [Caribbean](#), the [volcanoes](#) there and [Central America](#), including [Mexico](#). These changes are all expected to follow closely behind the adjustments in Indonesia.

The [Africa roll](#) comes next with the Zetas describing the [plate movements](#) but [can't](#) give all the details, although the effects on [Italy](#), [South Africa](#), the [Canary Islands](#) and [Egypt](#) were explained.

The size of the [quakes](#) and [tsunami](#) that will strike Japan was addressed with [UFO warnings](#) for North America as they will also experience quakes and a [tsunami](#). [Vancouver](#) and [Hawaii](#) were also detailed.

The [New Madrid earthquake](#) follows the big quakes in Japan and will [continue to adjust](#) up until the pole shift after [one big jolt](#) which also causes the [St Lawrence Seaway](#) to split and how there will be [no doubt](#) it has occurred. The [west coast reacts](#) to the large quake which will tear [communication cables](#) but [no volcanic activity](#) is expected in the Eastern US. The Zetas were also asked about [Florida](#), [Chicago](#) and how it would [compare to the pole shift](#).

Just hours afterwards, the [North Atlantic Rift](#) tears sending a [tsunami](#) racing towards Europe, propelled by the [gulf stream](#). The Zetas describe how it hits the [Bristol Channel](#), the [Irish Sea](#) and passes through the English Channel to hit the [east coast of Britain](#), devastate [Denmark](#) and what the residents of Denmark [can expect](#). [Sweden](#) and [France](#) will be hit (among others) but [Iceland and the Arctic Circle](#) will be unaffected. Advice is given on [how to warn people](#) and [how far](#) inland to be although [water will wash inland](#) along rivers. There will be [repeat tsunami](#) but smaller and how the different countries will [react](#) is mentioned.

The 8 out of 10 events are [mentioned](#) but [little detail](#) is given out. We're told that they may include [exploding oil fields](#) in Iraq, [blending of the seasons](#), [continuous plate movement](#), [increased visibility](#) of Planet X and there's something in store for [Italy](#). All of the 7 out of 10 events will [complete](#) before we move to an 8 but they will warm up during that time and the [last weeks](#) which is the 9 out of 10 have been detailed.

Now, in 2011, we have [arrived at a 7 out of 10](#) with buoys showing the effect on the [Philippines](#), flooding in [Australia](#) and [Sumatra and Java](#) sinking. The Java coastlines shows [undeniable sinking](#) while the media [excuses switch](#) from

rain to high tides. Sudden mass instances of [dead birds and fish](#) show the increase of earth movement around the globe but the [pace is slower](#) than the Zetas first anticipated although South America starts showing signs of [what's next](#). This delays have forced the elite to [change their plans](#).

Plate movements will create a [skew in the longitude/lattitude](#) for some lands, as shown by Japan after the [March 11, 2011 quake](#).

# ZetaTalk: Scale of 1 to 10

---

*Written March 22, 2008:*

*On a scale of 1-10, from the level that the earth changes are today, how much "worse" will it get in 2008?*

If you consider that you are perhaps between a 2 and a 3, it could be considered to rise to a 6 by the end of the year. 10 being the pole shift, of course. This is taking into consideration all Earth changes, such as weather, winds, floods, earthquakes and stretch zone accidents, and political and economic upheaval.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: 6/10 Progression

---

**Written June 1, 2008:**

*Where would the Zetas say we are now on the 1 - 10 scale (as had say we'd be around a 6 at the end of the year) with earth changes with the recent earthquakes in China, Japan and all the crazy weather and flooding in the US?*

The year has hardly begun! Perhaps a 4 or 4+. And realize that our warning included sociological changes too, like failing economies and crop shortages and homelessness. This too has only just started.

**Written November 1, 2008:**

*As we climb towards a 6 by the end of the year on the Earth changes scale, is it likely the US will soon have it's wake-up call in the form of a geophysical change affecting many and from that point on the Earth changes will be at the forefront of everyone's attention?*

Certainly we have had sociological/economic changes because of the Wall Street crash. Many are expecting that a 6 cannot be reached without significant Earth changes such as earthquakes or a serious wobble or perhaps some type of atmospheric changes that point to the presence of another planetary body in the solar system. Just what will occur, we cannot say. It may be one or many of these instances, or something totally unexpected

**All rights reserved: ZetaTalk@ZetaTalk.com**

# ZetaTalk: Are we At a 7 Yet?

---

*Written November 28, 2009*

*Zetas, are we at a 7 yet? [and from another] I know you must be sick of the question "are we at a 6/7?" So I will say it as a statement. Based on everything the world has gone through in 2009, the economy, fireball increase, earthquakes and insane weather, I feel things have really sped up this year and we are edging on 7. This is just my feeling.*

Nothing has changed since November 7 when this question was last asked. You will know when we have arrived at a 7, without question.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Nancy's Vision

---

*Written December 5, 2009*

*Nancy recently described a vision that she and other contactees received (original post): <http://poleshift.ning.com/forum/topics/common-dream> "The Mediterranean is shown, while Africa rolls somewhat. This opens up the southern Mediterranean above Algeria such that the Mediterranean floor there is a crumble, not supported. Then over to India where the western side of India sinks significantly, the plate tipping sideways a bit, raising eastern India during this process. Then islands in Indonesia sink, the plate supporting them sinking more than the surrounding area. Over to S America the Andes are shown doing mountain building, while some islands in the Caribbean are sinking, their plate pushed under as S America rolls. Southeastern US is pulled down slightly, while the land just to the west of the Mississippi drops slightly. As the Atlantic rips open, this causes water adjustments. First water rushes from elsewhere to fill the void, then piles up, clashing in the middle, so that a tide rushes toward Europe, assaulting the lowlands there." The impression that Nancy and others were left with is that the vision is indicating a major, worldwide event that will occur prior to the pole shift. Last week the Zetas were asked if we are at a 7 yet. The Zetas replied: You will know when we have arrived at a 7, without question. The implication is that something major and substantial will occur when we reach 7, outside of what we have been experiencing in terms of earthquakes and weather extremes. Can the Zetas comment on the vision given to Nancy and others. Does the vision represent the next major event? Is this the event that will bring us to a 7?*

The vision Nancy and others received described changes to many places on Earth, which will not necessarily occur simultaneously nor in close succession. The vision described what those in various parts of the globe can anticipate for their area. Given what the globe has experienced to move from a 2-3 at the beginning of 2008 to a 6, recently, what is described is rather radical. If any of those changes described in the vision were to happen, there would be few that would hesitate to say that we had moved to a 7 of 10. However, the severe wobble and lean to the left will result in even worse Earth changes than those described in the vision. It would be safe to conclude that the changes described in the vision are closely associated with a move to a 7, yes

# ZetaTalk: 2010 Statement

---

***Written April 3, 2010***

*What will be the biggest event of the year 2010 A.D?*

One of the events that was presented in the holographic presentation that Nancy attended last November will surely occur. Just what else might occur, or which of these events we are referring to, we cannot say

***Written May 15, 2010***

*The drama you said that will happen by the end of this year is going to be global? It will affect all people directly or it will be a very strong topic disaster somewhere that will depress all peoples consciousness?*

The 7 of 10, which we said would occur by the end of 2010, will include one or more of the disasters that Nancy was presented with during her November, 2009 holographic presentation. We stated that no one would be confused about whether a 7 of 10 had arrived, as whatever happened would "shock the world". None of the Earth changes described - the Mediterranean, Indonesia, S America and the Caribbean, the New Madrid, or a European tsunami - affect the whole world. But the whole world will be aware of it.

# ZetaTalk: Plans Being Made

---

*Written June 12, 2010*

*Do the Zetas and Council of Worlds anticipate that the impending 7-of-10 events will be significant enough to help release more STO people from binding circumstances and trapped mental/emotional states? Many are in relationships with partners who only partially acknowledge what is to come and feel bound by their partner's fear or family obligations. Will the 2010 events assist those who want to help but who have felt hitherto fore unable to commit?*

Personal relationships are frequently torn apart when one partner takes the Earth changes seriously and the other is in firm denial. Such divergence does not change until the last weeks, when the one in denial suddenly demands to be taken care of. Hardly the partner the aware one was looking for. To prepare for the pole shift, one frequently has to change locations, change vocations, and make other wrenching life changes. All this is resisted by the partner in denial, so divorce or separation occur. This is further complicated if there are young children involved, or contractual obligations, or the need to remain in a particular location in order to find work or for a child to attend a particular school or receive treatment for a health condition.

Thus, for many, the break comes late, into the last weeks or certainly the last trimester when it is obvious that lingering will be fatal or impact the chance of survival. A father may grab the children and run, presuming the wife could not muster an investigation and bring them back before the pole shift happens. Certainly, during the last weeks, such matters would not get any attention from law enforcement, who will have their hands full and themselves be personally distracted. For those with freedom to act and few legal or ethical responsibilities toward others, the break will come earlier. In fact, the break may come as soon as when one partner realizes what the Earth changes mean, and wants to setup in a safe location without delay. Certainly, for those unencumbered, when a 7 of 10 is reached, the world shocked, this will be an impetus to action.

*Written June 19, 2010*

*How will the "7 out of 10" event this year impact the ability of people to prep for the shift? Will this be the start of "we may not be able to buy the things we want for a price we want to pay" scenario as there will be a run on tools and supplies in the wake of a major wake up call?*

Certainly delivery will start to be affected, and many people will be so alarmed that plate movement could occur to that degree, so will be starting to think about their personal safety. But in general the type of supplies that a survivalist want to buy will not be the type of supplies that the general populace will think of buying. A survivalist will want hand tools, off-grid electrical supplies, seed stock, dried or canned food stocks, and perhaps camping equipment. The general populace, finding they cannot get the variety of foods they were accustomed to, will join grocery clubs or make other arrangements to assure themselves of access. If fresh fruit is not available at the grocery store, then they will get this via the Internet and pay a bit more. Electric generators may be purchased in a flurry, as the fact that the grind can go down for an extended period of time will come home to those formerly complacent. But preparing to be off the grid permanently, with windmills or solar panels, will be something those preparing for the pole shift are mainly concerned with. The general populace will think short term, of generators run on petrol fuel.

Likewise with survival camp sites, which those preparing for the pole shift are trying to purchase or populate. Rural areas, without all the conveniences and comforts of city living, are not popular with the general populace, who tend to migrate from rural areas to the big city if only for the job opportunities, if not for dozens of opportunities. The general populace, stunned by the plate movements that bring the stage to a 7 of 10, will be thinking in terms of quake proofing cities and highways, retrofitting and ensuring that collapse cannot happen in the future. This type of talk will be coming from the talking heads representing the governments, as they still will not want to tell the populace the truth. Thus, the general populace won't be thinking of purchasing camping supplies as semi-permanent homes.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Reaction

---

*Written June 6, 2010*

*On The Zetas have detailed the European Tsunami and how it will affect in particular Ireland and the UK worst. The Zetas have stated that the tsunami will go approx 50 miles inland and people will need to be approx 100 feet above sea level (half the pole shift warnings). Due to the small size of these countries, 50 miles inland is very significant and I am assuming that millions will die and many more be affected but can the Zetas provide any information as to what life will be like in Ireland and the UK for those who manage to survive the tsunami? What will happen to these countries - Both Ireland the UK are wealthy countries used to a high standard of living and very few natural disasters compared to many other countries and are likely ill prepared, will they be flung into economic collapse and chaos? Will supply chains completely break down? How will the government react? And will many people have to start living in survival type situation well before the actual pole shift itself. What will life be like in the aftermath of the European tsunami?*

Long before the last weeks the Earth will be showing its inhabitants a taste of what is coming. It is unimaginable for the populace that Indonesia and the Caribbean would have islands sinking into the sea, or for N America to be pulling at a diagonal followed shortly by a monstrous tsunami rolling toward Europe. This is global, but certainly not Global Warming, nor can it be ascribed to anything coming from the Sun! By the time the tsunami strikes Europe, the world will have seen so much plate movement that no explanation will suffice except the presence of Planet X nearby. Signs in the sky and visibility of the Planet X complex will increase also, so that even media suppression will not suffice to keep the public dumb about the cause of the recent disasters.

We have predicted that the populace will increasingly turn away from the canned answers they are getting from their governments and the media, from the hand picked scientists reading from scripts, and will search the Internet and discuss among themselves to uncover the truth. Just as the Global Warming excuse was thoroughly discredited, NASA's canned answer that all Earth changes are somehow coming from the Sun or some mysterious space energy wave that only they can detect will be discarded. This will leave the establishment to claim the quakes and turmoil and wobbling Earth are something that periodically happens to the Earth, citing history, and pointing perhaps to an erratic and mysterious magnetic field in the solar system. They will not, however, admit the presence of Planet X. To do so would be to admit they had been lying to the public, and they fear the public's rage when this is discovered.

Governments cannot simply close their doors and ignore the homeless, their citizens, so are likely to pass laws to force the homeless to be integrated into communities. Homes with spare bedrooms may be forced to accept roomers, and farms will have more than enough ready hands to help with any harvest. Militias will be used to control rioting and force order, with curfews established. But when there is evidence in the skies that there is a presence nearby which could explain all that has been happening, this will change. Then government officials who were clearly in the know, NASA and those scientists who spouted the approved story line all those years, and any media heads who obviously cooperated during the cover-up will be in hiding. The truth will spread by word of mouth, if by no other means. And those who have survived the 7 of 10 or 8 of 10 cataclysms will sort out into camps, as we have described, of those determined to survive and taking action, and those preferring denial.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Economy

---

*Written November 27, 2011*

*Nancy, when 9/11 occurred the world almost stopped both fiscally as well as emotionally. Yet in the end only a few buildings came down and 3,000 people died. While those deaths are certainly important to their families I can only imagine the fiscal and emotional impact across the world when the 7 of 10 occurs in Indonesia. My question is can we expect a thousand times impact on our economy and our emotional state worldwide as the 7 of 10 occurs. If so won't the monetary system almost collapse if not at least be paralyzed. If so, it is imperative that everyone make sure that they are well prepared prior to this event. Since in the hands of man, there is no telling what the world leaders will do from as simple as wringing their hands to as much as imposing martial law.*

We have been asked many times about the strength of the financial system, and have iterated the many checks and balances that are in place and will be used when the time comes. The goal of the banking systems is to not only to survive, but to thrive. If they cannot thrive, they will certainly take all steps to survive. Closing weak banks and rolling the assets into stronger banks is a process that has been going on since 2008, the Wall Street crash, and will continue. This throws bankers out of work, throwing the bums out, but the system survives. A second defense is to limit banking services - only so many hours, only so much in savings withdrawn, smaller ATM withdrawals, that sort of thing. Next are price freezes which are imposed behind the scenes on the stock markets and bonds - no gouging by private parties. This does not make greedy brokers or bankers rich, but maintains the system. All of this has been in process already, during this the second Great Depression.

During any catastrophe causing loss of homes and businesses and crops, insurance companies routinely go bankrupt. In recent years they have tried to buffer their loses by refusing to insure homes for flood insurance if in flood plains, or refusing to insure homes for quake damage if in earthquake zones. If necessary in order to support business in the region, policies will be written but will become worthless when a disaster hits. The insurance executives take their retirement funds and run away, leaving their clients bereft. Governments, who must attempt to repair infrastructure, will do little to help those who have lost all. Those insurance companies not affected will continue as before, and those who were wiped out will make no apologies.

*Written January 1, 2011*

*Last two days I have heard on news about gas price would go up to \$5.00 per gallon by 2012. The gas is going up fast now. [Zeta314.htm](#) did mention Bush out of Iraq and Puppet Master was not interested in economy or bank failure. [Newsletter issue 38](#) did mention two-year rise in gasoline prices, American consumers now face sharply higher prices for foods. [Zeta372.htm](#) did mention gas prices which will be approaching \$ 4/gallon in the Summer, food prices dramatically increasing due to bee pollination problems. Is there any update from Zeta on rising gas prices which might hit \$5.00 per gallon? Will there be another collapse in economy and unemployment getting worst. Is this the repeat what happened during Carter Administration during his last two years with double digit inflation and recession? Many do believe that \$5.00 per gallon would cause unemployment as much as 20%, more businesses would go bankrupt and another depression.*

Is the economy going to get worse? Yes. Will the Earth changes bankrupt insurance companies and worsen the crop shortage situation? Yes. Will there be price increases and inflation? Yes. Will this reach the point where matters get radically worse than they are today? No. The reason is due to the manipulation that governments can do to prevent gouging. As we have often explained, the banking industry will not collapse. They have cards they have not yet played. Weak banks have been closed or consolidated, banking services limited and restricted to only the most solid customers, and limitations on withdrawals imposed. But the public does not see what goes on behind the scene, as governments can force the banking industry, or the stock markets, into controls designed to avoid collapse. In short,

gouging is outlawed. The failure to take such steps is what caused the Wall Street collapse during the housing bubble crash in the Fall of 2008. Bush/Cheney and their rip-off cronies are no longer in charge. Controls are now in place.

How would these same techniques apply as the Earth changes make matters worse? If the government printed money to allow Wall Street to survive, then they can do the same when insurance companies start failing. Consolidation, government backing, and companies can stay in business, reassured. Certainly the profit motivated oil companies can be forced into price controls, as can the distribution networks. This is already in place, though these moves are done behind the scene. Food distribution is also enforced. Companies and individuals who would seek profits by withholding food until the price was driven up, or sitting on stockpiles until the price rises, are aggressively pursued by governments, though this also is not public knowledge. If the establishment wants the cover-up over the presence of Planet X to last as long as possible, they do not want the public restless. Capitalism be damned.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Cause

---

*Written July 31, 2010*

*I have a question for the Zetas concerning the hosing of planet earth. When Planet X hoses the earth, will that be the cause of the 7 out of 10 event that you saw in your holographic movie in the fall?*

Planet X has been hosing the Earth with magnetic particles, which is the primary reason for the Earth wobble, present since early 2004. As the magnetic N Pole of Earth comes over the horizon, it is pushed away, what we have called the polar lurch. This has gotten increasingly violent, thus the extremes in weather and tides. What will cause the 7 of 10 will be something additional. The closeness of Planet X has caused more than a press of magnetic particles from the N Pole of Planet X, it has forced the Earth to begin contorting to come into alignment with the magnetic field of Planet X in some way. Since the start of 2010, the Earth has at times been in a temporary lean to the left, falling to its side a bit. And lately, during July of 2010, it has even been moving into a position of opposition where the N Pole is pointed toward the Sun beyond what the seasons would dictate. We have described the end of the Serpentine Dance, so popular in crop circles. This slow steady daily roll, the well measured and recorded Figure 8 Earth wobble is now ending, to be replaced by something far more violent. In addition to this daily Figure 8, there will be erratic times when a sudden lean to the left or into opposition occurs, violent jerking around of the Earth. This has the effect of jerking the Earth plates against each other, so they move. It is this that will create the 7 of 10 scenarios.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Openess

---

*Written August 21, 2010*

*By the end of 2010 one or more of the events depicted in the holographic presentation will occur, shocking the world and moving us to a 7. The Zetas have said a few times the pole shift will happen before 2012, so that gives us about a year and 5 month window. My Q- without giving specific dates for certain events, isn't the timeline basically down? will the shocking event that moves us to a 7 be the point where media and government start being more open? zetas too? if the elite that control media and portions of political power are heading for their bunkers, isn't the threat of them mowing down millions probably gone now?*

Our prior statements about the pole shift likely happening prior to 2012 must be taken in the context that we are not allowed to give you the date, so even this warning must be taken with a grain of salt. We are constantly trying to get humans who linger in their comfortable coastal cities to move inland into rural area and get into gardening. Take our warnings in that context. The pole shift could happen at any trimester, and theoretically could happen after 2012. That said, are we at the point now, when a 7 of 10 will surely happen at least within months, will the establishment no longer consider an informed public a threat? No, because the 7 of 10 has not yet occurred, and even when it has, the establishment will still want to delay informing the public unless they are firmly ensconced in their bunkers. Bunker living is very restrictive, and those in power and with great wealth like to move about, albeit in safe areas, and enjoy the fresh air and to have the ability to entertain themselves with travel. When the public is informed, it will not be through formal means like the major media.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Warnings

---

*Written December 4, 2010*

*On If many heads of government are taking the 7 of 10 warning seriously (due to signs, monitoring and ZT) is there any consideration given to coming out with some type of warning? I understand that we are not at the point where PX can be acknowledged but can the excuse of geological instability or something like that be given as a reason for a warning? Are governments still worried about a "White Lie" scenario? The Zetas have mentioned in the past specifically that there are alignment issues and crust related stress around the Christmas day or Boxing day timeframe. Has most of the previous ill intentioned parts of the Bush Administration legacy in areas like the Military, CIA and FEMA been routed at this point? Is the leadership of these government heads well in hand now?*

We are asked almost weekly how the governments of the world plan to respond to the 7 of 10 scenarios, and have responded to this in the past. They will not warn their populace nor is Obama at liberty to do so for many reasons. This is, at the current time, considered just another prediction from just another source, despite our accuracy on hundreds of predictions that have come about. Our predictions tend not to be dated, except for the 2003 prediction on the passage, which they consider a fizzle despite the obvious arrival of Planet X precisely as we predicted - where and when expected. Where our predictions on the 7 of 10 scenarios starting by the end of 2010 have made some nervous, the specter of the public becoming solidly aware of the ZetaTalk message and aware of the presence of Planet X nearby scares them more.

Indeed, there is vulnerability during the magnetic dance between Planet X and the Earth during December. That the wobble becomes worse during this time has been pointed out in the past. Since March of 2010, when an 8.8 quake struck Chili, we and the public have associated the obvious plate movements that have occurred since then to the 7 of 10 predictions. The plate holding India has been sinking on the western side, in Pakistan, as predicted - a fact which can no longer be denied as enough time has passed since the July floods for the rainwater to drain. Jakarta is sinking and Thailand is folding while the number of volcanoes in the region, particularly along the Sumatra/Java edge of the tongue holding Indonesia, are exploding to a degree beyond what has occurred in the past.

Meanwhile, in the S America region, matters are even more obvious. That the Caribbean is under pressure has also been noted since the Haiti quake on January 12, 2010 and the lifting of the northern border of the Caribbean Plate since March of 2010. The Andes Fault is showing mountain building while the sea off shore from Colombia is sinking. This is all of record and occurring, date wise, simultaneously. Oil and gas rigs have been exploding with unexplained and unexpected accidents in the Caribbean all year along the Caribbean Plate border, as occurred in Bonaire on September 2, 2010 and in Trinidad and Tobago on May 13, 2010. Even Africa showed her eagerness to roll by late November of 2010.

At the current time, 2010 has been a year when all the plates along the Equator have been loosened up by the continuous daily jerking about that the Earth wobble incited by the near presence of Planet X. The plates are greased, so that at the present time one can find quakes on all sides of the various plates involved, occurring almost simultaneously. They are twitching, almost unimpeded in their motion, and just waiting for a push to set them into the plate movements we have described. Enter the Christmas Hammer, the end of the Magnetic Trimester on December 17, the time frame of the great 9.5 Sumatra quake on December 26, 2004. Do our predictions that the 7 of 10 scenarios will occur prior to the end of 2010 have something to do with December as a month of magnetic changes affecting the magnetic dance between Planet X and the Earth? Yes!

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Cover-Up

---

*Written December 11, 2010*

*One would assume that the Puppermaster does indeed plan to support higher visibility of ZT and Nancy, per the Zetas and the current media posturing around Pole Shift related issues. Once things start to break open with 7 of 10 Quakes, PX visibility and validation of ZT predictions, will there still be a push for things like Chemtrails, PX topic blacklisting in media, "intimidation" of those in the know, etc.. by the "middle men" as the Zetas call them, or will they at that time resign themselves to "hide in their bunkers then"? How long will we have to fight against their disinfo and intimidation after things really start to break open? Agree that everybody or at least as many as possible should have knowledge and be able to make their own choices.*

Will the cover-up intensify or weaken after the 7 of 10 and with more media exposure for the ZetaTalk message? It will do both. We have stated that those in charge of the cover-up are gripped in fear at the thought of the public becoming aware of their role, and coming after them for it. NASA's explanations for what is seen in the skies will become more inventive. They will get increased media coverage too. Their fear will be palpable, very evident, and their message shrill. Geologists will be mustered forth to talk about climate change and geological change over the eons, with the phrase "millions of years ago" thrown around frequently. When Planet X and its components becomes more visible in the skies, the reaction of those fogging up the skies with chemtrails is likely to be more fogging, at least at first. At the same time, those among the elite fearing panic in the public, or a backlash over the cover-up, will be increasingly heading for their bunkers. Thus the cover-up will lose strength, and eventually chemtrails will no longer be funded and NASA will prefer to close shop rather than defend its stance.

*Written January 1, 2011*

*The Zetas have mentioned that the cover-up is a fragile thing, with many in the know and these numbers growing daily. As the Earth changes leading up to the pole shift itself are obviously spaced out over an extended timeline of some type, is it not 100% obvious to those in charge that events such as the sinking of Indonesia and South American roll will fatally damage the cover-up and by extension those in charge of it? Why would the Elite not get behind a disclosure program and identify a set of scapegoats to dump public rage on? This would allow them to still at least try to maintain some semblance of control. I am not suggesting that this strategy would work as there are significant unknowns in play still obviously, but given how the elite typically operate it would seem to me that they would want to try to maintain their version of "spin" and thus at least a perception of control?*

What makes you think that scapegoats have not already been chosen? This is typically the first thought among those perpetrating a fraud - who to blame when it all comes down. The statement that there is no honor among thieves alludes to this. The police regularly get criminals to turn on one another by promising an easier path for the one who chooses to save themselves at the expense of their former partners. We have mentioned that NASA will likely be one of the first scapegoats, as in order to have their job, to be employed at NASA, they had to sign national security oaths. Anything deemed likely to cause a public panic, such as the alien presence and UFOs buzzing the ISS or the presence of Planet X were to be denied. NASA of course will point to these oaths when defending themselves, which they eventually will do when the heat gets too hot.

Those in government who insisted that the public not know will point to various think-tank studies and surveys. The War of the Worlds radio broadcast, which showed the public in a panic when they thought the broadcast was real, fearful of an alien invasion. The CIA conclave of scientists and professionals which concluded that the public could not handle shocking information. All so self serving, but on record nonetheless. When the governments of the world, heads of state, are questioned they will point to the Bush/Cheney meeting in France in the Fall of 2003, ostensibly to mend fences but as we pointed out, in reality to talk about Second Sun sightings and their import. It would all pass,

with only high tides and a few earthquakes, and public panic was the real enemy, or so they were told. Who were they to question the great US, who seemed to be dominating the world and certainly were dominating the world with their military presence.

Finger pointing will be circular, with whomever is questioned blaming some one else. The many who were involved in the cover-up, such as weathermen who were told to stop talking about all the records being broken, or members of FEMA ordered to plan for the worse while keeping the public in the dark, will assert they were following orders from a boss. The blame will go up the line to the top, to people who cannot be questioned and certainly not readily removed from their positions. Members of Congress informed about the presence of Planet X while presenting an appearance of business as usual on the concerns of government will state they were briefed incorrectly, and those giving the briefings will loudly deny this, a case of he-said/she-said. The Executive Branch will point to the many laws they are bound to follow, blaming Congress for lack of action. It will be endless, the circular finger pointing.

# ZetaTalk: Anxiety

---

*Written September 18, 2010*

*Now that we know there will be several "7 of 10-level" events, which may even continue through the "8 of 10-level", and which may stretch out over many months, even years. Is it in fact likely that for many in the cities, we should be preparing to exist for that length of time before the shift itself in our 'safe place'? So that in convincing someone to "head for the hills" following the series of mega-quakes in Japan (speaking now of the folks who will be impacted severely by the New Madrid 'adjustment'), they should have enough supplies to see them through for many months - just 'in case'? I was already aware that there will be a number of smaller EQs leading up to the "7 of 10-level" mega-quake, but without going into asking for a 'date', is it possible that the "7 of 10-level" events could stretch out that long into the future? Some people may now opt not to spend the time and effort preparing a route to safety if they feel they will have to stay at their jobs until they know that the time is close enough at hand they can afford to make the break without jeopardizing putting food on their family's table. The elite will have aircraft at their disposal, so bridges are of little concern to them (in fact it will be a relief to them that the hoi poloi will be trapped in the cities). So there's a very real Catch-22 going on in some quarters, and every little bit of understanding will help in convincing those that are debating with themselves how best to address this dilemma. Obviously it would be best to have a year's worth of food saved up, and to purchase land or re-discover relatives in 'safe areas', but this is for those that aren't that fortunate.*

Lately examples of hand wringing have increased. Hand wringing is where the person understands what is about to occur and the limits of what information we can relay to mankind, but is wringing their hands over all this.

Hand wringing includes complaints that we and our Emissary Nancy have not provided undeniable signs of the presence of Planet X, so that skeptical friends can be convinced. Of course, there are signs, including an Earth wobble where the Sun and Moon are out of place, which can be accurately demonstrated! The Moon is way out of place, so far out of place that if traced for a month with a friend, using free planetarium software on the web, that friend would either be in total denial, refusing to see what is before them, or convinced. Here the complaint ignores the fact that most of mankind will deny until the end, and then only harden their denial while going insane over the matter.

Hand wringing also includes the fact that we, the Zetas, as all visitors to Earth at this time, are required to keep the date of the pole shift secret and are not here to rescue mankind. This results in insults, where we or Nancy are told we are hardly Service-to-Other. The facts, that most of mankind today lives in desperate circumstances and are not rescued, falls on deaf ears as those demanding to be rescued do not care about others, just the self whose lifestyle is suddenly threatened by the pending pole shift. That the date must be kept secret, for many reasons, also is challenged, usually by those who see themselves as well enough off to be able to take advantage of such information. Those less able are not considered in this equation.

Hand wringing also includes the decision of just when to leave for a safe location - that awful decision of just when to leave loved ones and a more comfortable setting and bolt for the hills. This of course is an utterly personal matter, with different variables for each individual, and we don't do personal counseling in any case. This is your decision. There are some people who will wait until rotation stoppage before considering an exit from a city, despite all odds. There are others who early made the move to rural areas, forsaking the comfort of an extended family and job opportunities to do so. Those who go early are better situated for the Aftertime, and those who wait to make the dash with a few high calorie bars in their back pack are thinking short term and will suffer the consequences. Even should the date be given, this would not change, as man has free will!

*Written September 25, 2011*

*In responding to someone's concern about how brutally aggressive a particular police district responded*

*to a potentially racially charged situation, I replied that I believe more people than not, regardless whether they don't quite understand why or would even admit to, are operating on extremely short fuses these days. On a scale of 1 to 10 how do the Zetas read the present mass/global consciousness as it relates to anxiety; whether or not the masses know, suspect, deny, or are still [innocently] ignorant [through no fault of their own] of the pending shift? Or how do the Zetas [and/or other visiting entities] break it down? What with the increase of quake and volcanic activity; the fires; massive flooding, record-breaking heat waves; freak unseasonal storms; etc., has it spiked compared to even a year ago? And as we take in all of this info, are there spikes as relates to those in the know as they/we anticipate the 7 of 10 event(s)?*

Irritability, a symptom of seething anger, is present when the person cannot address a problem for some reason. A man stuck in a bad marriage, but unable to divorce, will be seething and thus irritable at more than his wife. The world's populace senses something amiss, as we have often mentioned. For some it is the weather extremes, the intractable droughts or horrific floods that are reported worldwide. Why is this happening, they wonder. They are dissatisfied by the explanations given by experts, and for some it seems oddly in compliance with end time predictions.

For some it is noting the bizarre dance that NASA and the Global Warming theorists have gone through. Predictions that the Sun will virtually explode while year after year it remains asleep. Predictions about Global Warming followed by almost devoted compliance with carbon emissions laws by most countries, side by side with the revelation that the data was cherry-picked and the evidence that a warming trend was man-made was never there. For some it is sighting a Second Sun one dawn, or noting the Moon so out of place yet the erratic behavior of the Moon never mentioned on the media, or the the constellations are out of place.

Whatever the reason, the populace senses they are being lied to, and this realization creates anger which has no outlet. Are they to attack the media? They sense the media is being directed to remain silent. Are they to attack the experts? This routinely gets them shamed by the experts, ridiculed, and given demands to produce proof of which they speak. This leaves approaching the Kremlin or the White House or Parliament, screeching demands for the truth from the street, and everyone knows how that turns out. Thus, they remain irritable.

# ZetaTalk: Denial

---

*Written September 18, 2010*

*Who are the Zetas referring to when they say at the 7/10 event "We will have your attention"? Dont you already have the full attention of your followers? It implies that there are a number of people out there that for one believe in aliens, two, have seen zetatalk, three, have actually read it, and four, said "Im not so sure about that. If something big happens then maybe I'll pay attention". Or do you mean subconsciously or something?*

Even those who listen to our words and take them seriously are not connecting the dots to be able to envision what these disasters will mean. All intelligent creatures use these types of denial techniques, so we are not just criticizing mankind here. If one hears that they can no longer use their car, because the roads will be torn up, they don't register that all distribution of goods will be stopped or trips to the clinic for injuries will be blocked. They imagine the car, sitting idle while the roads are repaired. It does not sink in, that the use of the car will forever be prevented, or that the car may be flipped on its side with no means of righting it, ever, and will rust into uselessness while the tires rot. If we say that travel restrictions will be imposed, they imagine themselves approaching a counter and pleading their case, as is the situation today, or bribing someone, or finding an alternate road to evade checkpoints. That the counter will be closed, and the applicant facing a loaded rifle and told to leave, is not considered. That bridges will be collapsed, rivers above flood tide souring the banks and washing away boats, and side roads filled with looting thieves is not taken into consideration. When the 7 of 10 occurs, these situations, from some part of the globe, will be evident, and hopefully those who are capable of envisioning the pending pole shift will fully "get it" at that time.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Timing Hints

---

*Written June 19, 2010*

*The Zetas have described the precursors to the shift in great detail and have said that the pole shift will not take anyone by surprise but what about the first 7/10 event? - We will know when the pole shift is going to happen as the last weeks have been endlessly described in detail by the Zetas but since, at least for the UK, the 7/10 event could be described as a mini pole shift due to its effects, will there be any warning that this will happen. I worry that there won't be as there were no precursors to the 2004 Asian tsunami and God help those in Ireland and the SW of England if they get hit with the described 200-300ft tsunami without warning.*

Earthquakes will, as we have predicted from the start of ZetaTalk, get more violent and frequent and occur in places not expecting them. Outside of the warnings that man has learned to utilize, such as screech on the radio or pets running away from home or the physical signs that those who are earthquake sensitives get, there will be no warning. This also applies to those major plate movements which we have described, and which were included in the holographic presentation given to Nancy last November, 2009. All these regions will have increasingly violent and frequent quakes, and then one day blam the plate movement we have described will occur. There may be precursor movements, slight, warning that the plate is getting ready to move. But other than that, no warning.

The sequence of events, such that major quakes in Japan will occur before the New Madrid, is a known. These would be very large quakes of a magnitude that hit Sumatra in December 2004, though they may not be called this by a USGS forever downplaying magnitude these days. That these will occur before the New Madrid does not say that other plate movement elsewhere around the world might not occur before the New Madrid, or before the Japan quakes. Outside of the sequence of events known - Japan, New Madrid, European tsunami - we have not confirmed any other connection between events. So what will your warning for the European tsunami be, given that the UK will be so heavily hit? Quake monitoring stations on the Atlantic Rift will show that large quakes have occurred in many places along the rift, almost simultaneously. Tsunami buoys are helpful, but primarily it will be ships out to sea who will notice a large and rapidly moving wave. This only gives hours of warning, however.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Detailed Information

---

*Written September 9, 2010*

*The Zetas have said that between the main New Madrid earthquake and the European tsunami there will be 2-3 hours. Also, we know that the big Japanese quakes will allow the northern parts of the Pacific plates to shift, and this has repercussions on fault lines in the N American continent. Thus, we can assume that these Japanese quakes will occur directly ahead of the New Madrid adjustment. The Zetas can say what is the time will be between Japanese quakes and the start of the New Madrid adjustment/the main EQ? [and from another] Is there a relationship between the scenarios for Indonesia and S America and the Mediterranean. If the tongue of Indonesia drops, would this provide the opportunity for S America to roll? And would a pulling apart of the Atlantic Rift due to the S American roll allow Africa to roll, thus dropping the Mediterranean floor? Or are these separate?*

The 7 of 10 scenarios describe plate movements, and for this to occur something has to release the deadlock, the current stalemate where the plates are locked against each other. Once the deadlock is broken and the plates start moving, sliding past each other, new points where the plates are locked against each other develop, but these are weaker locks than the one at present. The current lock, as we have so often stated, is the Indo-Australian Plate which is being driven under the Himalayans. This is no small lock, as the height of the Himalayans attests. Nevertheless, the activity in this region shows this likely to be the first of the 7 of 10 scenarios to manifest. Bangladesh is sinking and the Coral Sea is rising, showing the overall tipping of the Indo-Australian Plate. Now Pakistan is sinking and not draining its floods as it should, while Jakarta on the tongue of Indonesia is also sinking rapidly, showing that the tilt that will allow Indonesia to sink has already started.

Meanwhile, S America is showing signs of a roll to the west. Explosions on islands just to the north of the S American Plate occurred recently, on Bonaire and Trinidad-Tobago, and the Andes are regularly being pummeled. There IS a relationship. As the Indo-Australia Plate lifts and slides, this allows the Pacific plates to shift west, which allows S America to shift west also. This is greatly increased by the folding of the Mariana Trench and the Philippine Plate. But it is the Indo-Australian Plate that gives way to incite change in these other plates, and this is what is manifesting now to those closely following the changes. Once the folding of the Pacific has occurred, Japan has been destabilized. We are not allowed to give a time frame for any of these plate movements, but would point out that it is not until the North Island of Japan experiences its strong quakes that a tsunami causing sloshing near Victoria occurs. There are clues that the New Madrid will be next.

Where the N American continent is under great stress, it has not slipped because it is held in place on both sides. The Pacific side holds due to subduction friction along the San Andreas, and the Atlantic side holds due to the Atlantic Rift's reluctance to rip open. What changes this dynamic? When S America rolls, almost in step with the folding Pacific, it tears the Atlantic Rift on the southern side. This allows Africa freedom to move and it rolls too, dropping the Mediterranean floor above Algeria. What is holding the N American continent together has thus eased, so that when the Japan adjustments are made, there is less holding the N American continent in place than before, and the New Madrid gives way. We are also not allowed to provide the time frame between the Japan quakes and New Madrid. Other than the relationship in time between the New Madrid and the European tsunami, no time frame can be given. The sequence of events is, thus:

- a tipping Indo-Australia Plate with Indonesia sinking,
- a folding Pacific allowing S America to roll,
- a tearing of the south Atlantic Rift allowing Africa to roll and the floor of the Mediterranean to drop,
- great quakes in Japan followed by the New Madrid adjustment,
- which is followed almost instantly by the tearing of the north Atlantic Rift with consequent European tsunami.

*Written November 20, 2010*

*2010.11.14 around Yemen has occurred 49 (!!!) earthquakes for 24 hours. It specifies in the beginning a tearing of the south Atlantic Rift allowing Africa to roll and the floor of the Mediterranean to drop. Zetas have told that the first will occur a tipping Indo-Australia Plate with Indonesia sinking and as have told that it happens til the end of 2010 and error possibility is excluded. Truly? Zetas spoke that before movement of platforms stronger and frequent earthquakes will be observed. Why in Indonesia doesn't occur similar (as in Yemen)? Till the end of 2010 remains a little more than month. And signs in Indonesia possibly already should be shown. Or has probably begun 7 of 10 will be sudden, without what or signs?*

Africa has begun to roll. Just as in July, when Pakistan sank approximately 10 feet in elevation, indicating the plate holding India was tilting, this does not mean the big 7 of 10 prediction is occurring in Indonesia. Jakarta began to sink in September, and again, this does not mean the big 7 of 10 for Indonesia is happening, nor did the many volcanoes erupting in Sumatra and Java in October signify the 7 of 10 had occurred. Towns along the coastline in Columbia began crumbling and sinking, and villages on the N Andes fault line in Colombia and Ecuador were clearly mountain building in late October, and all this following oil rig eruptions in rigs in Trinidad and Tobago and the island of Bonaire in the Caribbean. But all of this did not indicate the 7 of 10 roll for S America had occurred. We stated the sequence of events would be Indonesia's drop, then S America's roll, then Africa's roll. What you are seeing is a warmup, precursors, in all these regions. We stated that the trend would be obvious before the actual event, and you are seeing the trends.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Why the Release

---

*Written October 23, 2010*

*Is there a point when the Zeta's will be able to give a time frame reference between the European tsunami and the start of the severe wobble?*

This depends on many factors. Nancy has noted that last spring we were not providing the sequence of events for the 7 of 10. Yet recently we provided the sequence. What changed? It was our sense that our message, via Nancy and good press coverage to be given to ZetaTalk, was going to get a boost! There is a latent effort to promote Nancy in the media, giving our message to a broad audience. It was the Council's sense that this effort was sincere and not likely to falter. One hand washes the other. Coverage in the media would be enhanced by a significant prediction that came true. The public would give the ZetaTalk message more weight, thus, and ponder our predictions rather than dismiss them.

This is not providing information to the elite that the common man does not hold, as our 7 of 10 prediction is available worldwide in a number of formats. It is, rather, encouraging the cover-up to break, by forcing the hand of those, few in number but in powerful positions, who seek to keep the cover-up in place until the last weeks. It is the press of truth from below, from a single citizen and her fans who have been laboring over the years to get our message out, and the press of the world's greatest power broker from above. The cover-up, caught in the middle, will hopefully be crushed.

What will this mean? It will mean that those who want the cover-up to continue will hurl insults at Nancy, and attempt to intimidate those media outlets that are promoting our message. This is nothing new, but will not deflect what is in process. It will mean that the countering cover stories, that all Earth changes are from the Sun or from some mythical galactic center or that Planet X is far out in dark space somewhere will become more shrill. But this will not enhance their rationale, and the glare of the spotlight will just point out the flaws in their logic. In that this process is in the hands of man, we cannot predict where this will lead. The 7 of 10 scenarios are many, and will play out while the 8 of 10 scenarios, as yet not detailed, warm up. All this lies before the last weeks. Time will tell how far disclosure will be allowed to proceed!

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Sceptical

---

*Written October 16, 2010*

*On My question is about the 7 Of 10 . Zetas have said for many times that the 7 Of10 will happen at the end of 2010, many people are eagerly waiting and paying attention to it to find out whether it will actually happen or not at that time. If it does happens, they will totally believe that Zeta's the prediction is accurate, and take it as a basis for their poleshift plans . I know that although many Chinese people who care about 2012 have read ZetaTalk and Zeta's comments about the future events which have been translated into Chinese. But they are still very skeptic about it, and some of them don't believe it at all, because until now the major events that Zetas have predicted don't happen yet (ig, the 7 of 10). I want to ask Zetas if 7 of 10 is sure to happen at the end of 2010 or it is just another "white lie"? If so, I think many people would stay away from the ZetaTalk rather than get closer to it.*

If you are nervous, imagine how Nancy feels! She was there during the 2003 white lie, when Planet X so clearly came inbound as we said it would, right on track according to our coordinates and arriving in the evening sky just where we said it would some 7 years earlier. But it did not pass, as the word "passage" implies, nor did the pole shift happen "shortly after May 15, 2003". We did this deliberately to fool the Bush administration, which had stolen the White House in order declare martial law in the US, to negate all future elections there, to plant the US military in the oil rich Middle East and thus own black gold in the Aftertime. None of this happened, in great part due to our white lie which caused Bush to accelerate his agenda and thus stumble. But what would be the advantage of a failure on the 7 of 10 prediction? As you so amply point out, this would devastate those following and putting faith in the ZetaTalk predictions. There would be no gain. Follow what is going on in Asia, to see evidence of the drama soon to occur.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Angry

---

*Written December 18, 2010*

*It is now December 17, 2010, but it seems that there is no any distinct sign of 7/10 happening in Indonesia. A lot of people who have ever read the newest Chinese translation of zetataalk have become impatient, and some of them are even scolding zetataalk angrily. Only half month is left currently, I would like to ask the Zetas whether they still have enough confidence to insure the arrival of 7 /10 at the end of 2010? [and from another] How will the 7 of 10 sinking of Indonesia be handled by the media? Is the establishment planning some type of cover-up? I asked Mary a week or so ago about any hunches she had re this period, as she absolutely called the 12/26/2004 quake, 3 months ahead of time. She had the impact, and the region, and the approximate date. She implies a big boost to ZetaTalk in January. Will the world not be shocked by the end of 2010? Your prior ZT carefully separates these two incidences.*

The 7 of 10 will unfold but not as expected by many. It will not be a dramatic announcement on the news, as the establishment is ready for this, due to the extensive discussions. This is why Mary the psychic stated that after the first of the year Nancy would be held in greater regard and given credit. As we stated, there would be large quakes when Indonesia sinks but not the major quakes one would expect, not magnitude 8-9. Already there are many periods when quakes line the plate borders, and hammer there. During one such episode, the elevation will start to drop. We have never stated, in our predictions, how fast this would go, just said "suddenly". The start will be sudden, almost without warning, but the progress not swift as in the pole shift hour. It will be a steady sinking, in short bursts, over a 2-3 week period. S America will be right behind Indonesia in this regard, starting its roll. This will start slowly at first, the trend already noted, but the quakes starting to pick up as Indonesia sinks. Thus it will not be before the early part of 2011 before the full impact of the prediction accuracy is noted by the world. Meanwhile, the establishment will try to cover with lots of talk about storm surge, Global Warming, and high tides.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Cut Off

---

*Written November 13, 2010*

*Can we expect a sudden cut-off from ZT-info (chat)? When things heat up (7-8-9/10 etc) landlines and satellite communication might be destroyed and thus no updated ZetaTalk. No Internet. Is this likely to happen do you think? Or will Internet still be there even during and after the PS?*

We have stated that total satellite failure can be expected as the last weeks approach, with increasing failure up until that point. Certainly, during the last weeks, the 9 of 10, total failure can be expected. Prior to this time electromagnetic surge and pulse will affect clear communication via satellite, and cell phone usage. This leaves land lines as a route for communication, for the Internet, for phone lines, and for cable news. Static from rock under compression disrupts even these, however. It will be a matter of diminishing capacity, and will certainly start during the 7 of 10 scenarios. Nancy and others have taken extraordinary steps to provide mirror site services to the existing ZetaTalk and survival information, on several continents and at several sites per continent in many cases. When land lines drop from being torn by moving plates, especially between continents, this will help people access the existing pool of knowledge. In the future communication by short wave will be assisted for Service-to-Other communities, and as time passes and these communities become dominant and flourish, there will be other assists from aliens in the Service-to-Other.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Nuclear Reactor Accidents

---

*Written November 27, 2010*

*Perhaps that we can expect incidents at nuclear stations during the 7 of 10 events, i.e. in SE Asia on achievement of a 7/10, in the west and the north of the S America during its roll, during rupture of the New Madrid fault line, in the western Europe during a tsunami? I assume that earthquakes and tsunami can present some problems on nuclear pollution even before the pole shift. Any comments of the Zetas?*

After the Chernobyl disasters it is understandable that mankind is nervous about the coming pole shift and the potential of nuclear disasters in their nearby power stations. We have encouraged all to contact the operators of these facilities, and advise them of the coming disasters, encouraging them to shut down the facilities at the first sign of major quakes and the like. We have explained that to a certain extent we, as benign aliens under the control of the Council of Worlds, can step in and remove the explosive potential from these power stations, as we have from nuclear bombs held by the US, by Russia, and by other nations. In a shutdown procedure, bolts that inhibit the nuclear reaction are dropped between the reactor rods, stopping the nuclear reaction cold. This is a simplistic explanation, as the power plant controls run on electricity which can surge or fail, thus interfering with a shutdown. Such electrical surges or failure, happening during a shutdown, has been associated with nuclear accidents at Chernobyl, and SL-1 for example. As the hosing from the magnetic tail of Planet X continues to waft over the Earth, such surge and brownout can be expected. We predict that many nuclear power plants will be shut down, permanently, during the Earth changes leading into the pole shift, due to a combination of earthquake threats or damage and electrical surge and brownout. The grid will, in any case, be down after the pole shift, so this is only an early loss. As to flooding of reactors during the Earth changes or the pole shift tides, other than interfering with the electrical controls, this does not create, in and of itself, a disaster. Water is used to cool the reactor rods. It is the absence of water, due to the pumps being inoperable, that is a problem.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Skyscrapers

---

*Written January 22, 2011*

*In 2002 the zetas talked about [imploding cities](#) due to collapse of the infrastructure under skyscrapers but could not give any details on timing. With the 7/10 events in mind, are they able to tell us whether they expect this to occur anywhere? Skyscrapers in cities along the top edge of the South American plate like Caracas and Panama City would seem to be at real risk of this happening but also what about the east and west coast of the US when the Pacific, New Madrid and Atlantic Rift adjust?*

Imploding buildings have been occurring, though this is posed in the news in the context of sinkholes or landslides, always caused by recent rains washing soil away and the like. Anytime the ground moves to destabilize a building, it will start to collapse, this side sinking, the walls cracking, etc. For tall buildings in cities to implode requires a more extreme situation. Towns and suburbs and malls are built where there is solid ground but bedrock is not required. Skyscrapers require pylons footed on bedrock. But bedrock will shatter and in particular, tilt during the coming Earth changes. Pylons can also bend or snap. For this to occur, significant moving of the plate must occur. Tearing or pulling apart can occur in the stretch zone, allowing rock strata to sag. Or compression that snaps the rock strata, causing the rock strata to snap and jut upward or jumble and fracture into pieces can occur. Imploding skyscrapers will be among the shocks awaiting the public during the 7 of 10 scenarios, in particular during the Japan quakes and the New Madrid adjustment.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Precursors

---

*Written July 3, 2010*

*Could the Zeta's please respond to the irregular wave patterns we are seeing on the buoy data reporting system for buoy 55023 north eastern Indo-Australian Plate? Are they showing a relationship to the flow of magma beneath the earth or perhaps harmonic tremors?*

When asked about this in April, 2010 when buoy 55023 first began showing the sea floor rise, we mentioned not only the steady rise of the eastern edge of the Indo-Australian Plate but flexible parts of this plate which can flex when the plate position changes. Plates are heavy, and when they are tipped up, they can bend at the point where they are becoming suspended, bend under the weight of rock no longer supported by magma. A void is created under that part of the plate, in essence. The sudden precipitous drop in water height on June 25, 2010 does indeed have a relationship to the 7.1 quake in the Solomons a day later. This activity, the lift in the plate, has gotten stronger, and the trend will only increase in the near future.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Bangkok

---

*Written November 13, 2010*

*Is all the flooding in Thailand from rain, as purported? If Thailand is having so much rain, then why not the surrounding areas? Is this sinking land? <http://poleshift.ning.com/profiles/blogs/is-thailand-sinking-any> And what is the relationship to a new apparently volcanic island near Bali? <http://poleshift.ning.com/profiles/blogs/a-new-island-has-risen-from> This new island rose, but is not steaming as a volcano would. Some land rises, others fall?*

Where Bangkok is certainly low land, so low in elevation that it would be under water with a mere 10 foot rise in sea level, there are many regions in SE Asia just as low who are not experiencing flooding. If Thailand's flooding were due to rain from a tropical depression, then why are all the neighboring countries with a similar elevation not flooded too? Vietnam south of Ho Chi Minh is far more vulnerable, and for a broader area, yet is not in such distress. Note the mountainous regions to the east and west of the valley in central Thailand. We have mentioned that when a plate tilts, rising one side and sinking on the other, that this plate may bend where the plate is thin. This is happening to some degree in the Coral Sea off the east coast of Australia, where the bending plate causes an uneven rise there beneath the buoys. It is also true that thin places on a plate can give rise to buckling when that plate is under compression, being squeezed. The tongue holding Indonesia is certainly under such a squeeze. As the tongue is pushed together, the eastern portion pushed toward the west, the valley in central Thailand is buckling, being pushed down. Simultaneously, a new seemingly volcanic island appeared between eastern Java and Bali, where the tongue is under pressure as it is being pushed down under the curve of the Indo-Australian Plate. Where this is causing extensive volcanic activity in Sumatra and Java, it is also finding weak places in the plate holding Indonesia, which can buckle in such a manner as to rise. The new island is indeed volcanic in origin, having been formed years ago under the sea, but is no longer an active volcano. Thus, rising land, due to buckling, is the only explanation. The squeeze is acting like an accordion, as it comes together. Some parts rise, some parts fall during the compression.

# ZetaTalk: China UFO

---

*Written July 10, 2010*

*Is China really getting UFO visit in its eastern city Hangzhou that air traffic was disrupted on July 8? If not what was the thing they saw? [and from another] <http://tieba.baidu.com/f?kz=821647347> Insider reveal that the UFO could be seen by naked eyes. Actual how the incident was reported: around 8 pm, a private jet pilot on the runway spot a UFO about the height of 450m above. He reported to the control station. And the control station decided to secure the airport to prevent flights colliding with the UFO. They also inform the military to launch a search for the UFO. After 1 hour of search, they found nothing. Inflight radar show no UFO indication, only military planes. It's advise that nothing had been found and the government did not hide anything. And on another post, some confirm that the UFO objects appears as a BOL (confirm with latest update from media), and sights from Vietnam sea near Guangxi, reported around 8pm. Another sighting at Guangdong around 4am on the 7th. The object was moving quite fast. My take is: military have found nothing, yet know its a real UFO. So just covered some of the loopholes and say its not visible to naked eyes.*

Hangzhou is on the line of breakage as the tongue of the Eurasian Plate is pulled down and under the Indo-Australian Plate. This is the line so active in sinkholes lately, from the point where the Himalayas are pushing into China across to the coast. Hangzhou is also on the coast, at the end of a bay which will surely have tidal bore or tsunami compressing to a point at Hangzhou when the Pacific does any degree of adjusting. The UFO was reported, sighted, as far south as Guangxi and Guangdong provinces, which are likewise along the coastlines in the regions being drawn down as the tongue of the Eurasian Plate is being bent. These regions, and Hangzhou, are clearly being warned about tsunami and a suddenly rising sea level as the plate is bend and pulled down. In sightings such as this, telepathic warnings are given to those below. The plate bending is at present gradual, and only exhibited by dramatic sinkholes that have developed. But plate movement, accompanying earthquakes, produces sudden changes, and it is then that those along the coastlines will experience sudden tsunami and loss of sea level.

# ZetaTalk: Taiwan UFO

---

*Written August 7, 2010*

*What can you tell about this video? Lightning UFO Taiwan Pyramid [http://www.youtube.com/watch?v=\\_66ttHyJhuU](http://www.youtube.com/watch?v=_66ttHyJhuU) Comments of Zetas?*

During an intense lightning display, in which the lighting primarily remained up in the atmosphere and did not seem to ground, a pyramid UFO was sighted. In these types of UFO sightings, which get media attention and are seen by many on the ground, there is telepathic communication, warning those below of pending Earth changes. What is the warning for Taiwan? The UFO display was timed to occur during the lightning display so that many would notice, and ponder. Taiwan has been liberal in accepting immigrants, and will be pressed during the coming months to accept more. Indonesia will suffer as the tongue of Indonesia is pushed under the curve of the Indo-Australian plate, and many drowning Indonesians will be looking for a home elsewhere. Those in Taiwan are being told to expect this, and to search their hearts as to how to respond.

# ZetaTalk: Leader's Reaction

---

*Written November 6, 2010*

*If the 7 of 10 involves Indonesia and surrounding lands, wouldn't a key indicator be the sudden departure of their major leaders and elite? They have some information and are following Zetas as well. They should be in a good position to get out while the getting is good.*

How many of the ruling powers in Indonesia, and their wealthy and corporate cronies, are aware of the ZetaTalk prediction on the 7 of 10 scenario to afflict their country by the end of 2010? Few, and of those who have, the prediction has been thrown in the same basket as all other predictions from all other sources. The elite are accustomed to dictating, not listening. The process of denial, whereby the person tends to resist information that would make them feel uncomfortable, is especially strong in the elite, who fear being toppled from their perch. Then there is the arrogance that those in the elite invariably develop during their life, where they are well guarded from the public's rage and any of the hardships that afflict the common man. Their opinion of ZetaTalk, and for their own vulnerability, will change after the 7 of 10 event, as many of their number will die during the turmoil and sudden flooding.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Singapore

---

*Written June 19, 2010*

*Thanks for your information on earth changes. I read that during your holographic presentation in November 2009, you saw that the western edge of the Pacific plate will subduct thus raising the eastern side of the Indian-Australia plate, with an additional tipping of its sideway (which I believe to be along the Java Trench), and most of the Indonesian islands will then sink. The sinking of the Indonesia islands will be one of the many events that leads us to the 7 of 10. I will like to know will Singapore (and Peninsula Malaysia) be submerged too during this 7 of 10, which is prior to the pole shift? Considering the fact that Singapore is very near to Indonesia (Sumatra Island) and could be easily mistaken to be part of its island. (I know Singapore, together with Vietnam and Thailand will be submerged after the poles shift when the polars melt.)*

Singapore, as well as the large islands of Indonesia and the Malaysia are riding on the tongue of the Eurasian Plate. These will all suffer when the plate movement described as part of the Holographic presentation Nancy was privy to on November, 2009 occurs. Where this has been included as a pending large plate movement, we did not specify just what of the holographic presentation would be included in a move to a 7 of 10 stage, nor are we allowed to do so. We were only allowed to state that one or more of the plate movements described would happen by the end of 2010, when a 7 of 10 would have arrived, and that a 7 of 10 would "shock the world" so that there would be no doubt it had arrived. New Guinea, however, rides on the Indo-Australian Plate and will if anything get a bump up in elevation due to the plate tilting.

To what extent will the islands on the tongue suffer during the plate movements described? Sumatra and Java of course ride at the edge of the plate, and are land masses rather than seabed because of the subduction pressure. Rock has been scrapped off the tongue as it subducted, creating mountains from this jumble. Sumatra and Java are not, thus what is assumed to be solid rock but is a clutter, a jumble, and can thus easily shift under sufficient pressure. The Malaysia peninsula is lowland, and any reduction in sea level is devastating. Singapore thus shares in a dual tragedy, situated between a crumbling Sumatra and a sinking Malaysia. Sumatra and Java will not sink entirely, as they have high ground, high mountains. Borneo likewise has high ground, and this will survive even the scouring of the water wash from the Pacific during the hour of the pole shift. But during the plate movement that will push some islands in Indonesia down, many small islands, and the coastlines of larger islands, will experience a loss of sea level, suddenly. In that Singapore is situated on lowland, it too will become suddenly flooded.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: The Philippines

---

*Written August 14, 2010*

*Greetings from the Philippines! The z's described what happens to China (sinkholes) and Indonesia (islands sinking) during a possible 7 scenario, but what happens on the other side of the Indonesian tongue where the Philippines lie? Will islands in the Philippines also sink?*

We alluded to the time when the tongue that holds Indonesia and the Philippines would subduct under the curve of the Indo-Australian plate in our former Safe Locations advice for the Philippines. The Philippines will find themselves pulled down also. The southern coast of China has been warned, by UFO flyover and telepathic message, to anticipate a rising sea when the tongue is pushed down. The crack point, the point where breakage of the tongue is occurring, is in a line across the tongue well above the Philippines. Thus when Sumatra and Java and the Malay peninsula find their streets flooding, losing sea level, the Philippines will find their problems in this regard not far behind!

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: India

---

**Written October 16, 2010**

*As zetas stated before that when we reach 7 of 10, western India will sink, now you are saying that "India is not where the action is during the 7 of 10." Please explain. [and from another] The Indo-Australian plate currently is pressing against the Himalaya's which is affecting Pakistan (lowering and sinking). If the 7 of 10 is not going to be affecting India directly, there must be a reason since the Indo-Australian Plate is long and goes across the equator up to the Himalaya's as one piece. Will the Indo-Australian Plate break into two parts before or after the 7? Will pressure on the Indonesian area next to the Indo-Australian Plate (set to start sinking during the 7) increase the speed of Indonesia sinking if the Indo-Australian Plate breaks into two pieces - to form the Indian Plate and the Australian Plate? [and from another] [http://en.wikipedia.org/wiki/Indo-Australian\\_Plate](http://en.wikipedia.org/wiki/Indo-Australian_Plate) Recent studies suggest that the Indo-Australian Plate may be in the process of breaking up into two separate plates due primarily to stresses induced by the collision of the Indo-Australian Plate with Eurasia along the Himalayas. The two protoplates or subplates are generally referred to as the Indian Plate and the Australian Plate."*

Though the Indo-Australian Plate is sometimes referred to as two separate plates, this plate operates as one and will continue to do so. Where Indonesia at the southern edge will lose approximately 80 feet in elevation, the curve of the Indo-Australian Plate nestling this southern edge of the tongue will not gain that much in elevation. Bangladesh will find some of its recently submerged islands suddenly reappearing, and the tides will not roll inland as far as formerly. Overall, perhaps a 15 foot gain in elevation, though this is short term as the continent of India will continue to submerge as time marches on toward the pole shift. What occurs in the pushing down of the tongue holding Indonesia is a drama occurring under the water, in the main. One can see from elevation or relief maps that the submerged land to the south of Sumatra and Java are not under deep, but under relatively shallow water. We have described Sumatra and Java as land formed by the scraping of the tongue holding Indonesia, and pushed back along the tongue holding Indonesia by the edge of the Indo-Australian Plate. This will again occur, but as the tongue overall is pushed down, the scrapings will not produce new mountain ranges above the waves but only jumble under the waves. The western edge of India, where the Indus River region in Pakistan is sinking, will likewise not experience that much loss of elevation, commensurate with the eastern edge of India, perhaps a 10 foot drop. What is occurring in India is not where the 7 of 10 action will be focused, at least not in the public eye.

**Written November 20, 2010**

*Will Karachi sink during 7 of 10? Or will Karachi sink when we reach 7?*

We have predicted that the western edge of India will only lose 10 feet or so of elevation during the 7 of 10, and given the degree of flooding that Pakistan is already experiencing, Karachi has already experienced some of this elevation loss. The flooding in Pakistan, however, is afflicting the Indus River valley to the east of Karachi at this time, on that portion of Pakistan lying on the plate holding India. When the tongue holding Indonesia drops, Karachi will experience great quakes and crumbling, but overall this city will not yet sink.

**Written November 27, 2010**

*Will Mumbai and Bangalore sink during 7 of 10?*

The folding of the Pacific plates that accompany the sinking of Indonesia during the 7 of 10 scenarios involves, as we have explained, the Mariana and Philippine plates tilting and flattening westward. This is nothing more than an existing trend, so is just a matter of the plates moving along faster in the direction they are already going. The Mariana Trench is a zone where the Pacific Plate is subducting under the Mariana Plate. The Pacific Plate curves down at this point, plunging under the Mariana Islands which ride on the Mariana Plate. The trench will be suddenly closed, so that rather than a trench there will be the Pacific Plate scraping along the Mariana Plate, and giving the Mariana Islands a

temporary boost up as the plate tilts during this process. The Mariana Plate, thus tilted, will slide its western edge down along the Philippine Plate, as the Mariana Plate subducts under the Philippine Plate and this process will now be accelerating. The Philippine Plate likewise tilts its eastern side up, dropping its western side down. The exaggerated tilt accelerates the subduction of the Mariana Plate, and also accelerates the subduction of the Philippine Plate under the tongue holding Indonesia. The tilting of the Philippine Plate give the Philippine Islands a temporary boost up also, as these islands ride on the eastern edge of the tongue holding Indonesia. Meanwhile, the tongue holding Indonesia has been plunged down, ultimately pulling both the Mariana and Philippine plates down as they fold so the Mariana Islands do not have a permanent boost in elevation. Nancy has explained this as a deck of cards, scattered on a table top, being pulled together into a deck. The plates are folded against one another.

# ZetaTalk: Hong Kong

---

*Written November 27, 2010*

*Will Hong Kong sink during 7 of 10? If yes, how serious it is?*

Hong Kong will be inundated by seawater during the 7 of 10 sinking of the plate tongue holding Indonesia, losing approximately 20 feet in elevation. Where much of Hong Kong is in the hills surrounding the city, it will nonetheless be devastated. Services such as clean water and electricity will be negated, so the desperate residents of the high rises will be living like birds in the trees. Where this will be a shock, it is a shock that will come to Hong Kong in any case during the pole shift. Thus, by forcing residents to move to higher ground, the 7 of 10 devastation is actually an assist toward survival.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: The Mentawai Islands

Written December 11, 2010

*Can we expect any earthquake of 8-9 magnitude before end of 2010 that accompanies the tsunami caused by the bending of the tongue [holding Indonesia](http://www.searo.who.int/en/Section1257/Section2263/Section2341/Section2376_15628.htm)? How would that bending plate affect the Mentawai Islands, tsunami-wise? And if there will be any tsunami, would it be higher than the 25 October tsunami in Mentawai? [http://www.searo.who.int/en/Section1257/Section2263/Section2341/Section2376\\_15628.htm](http://www.searo.who.int/en/Section1257/Section2263/Section2341/Section2376_15628.htm) May I ask if an earthquake of 8-9 magnitude will accompany (I'm not asking before or after) Indonesia sinking before end 2010?*

The Mentawai Islands will not sink entirely during the 7 of 10 scenario afflicting Indonesia, nor, surprisingly, is great tsunami expected for these islands. We have mentioned waves that clash and boil but tsunami is a large amount of water rushing in a clear direction, and this will not be happening to the leading edge that slides under the curve of the Indo-Australian Plate. What will be experienced during the 7 of 10 is a suddenly rising tide, rising rapidly. Where water rolls inland and is blocked, it will seek to go around hills and rush into inland valleys and the like, and this will bring turmoil of course, turbulent water, boiling water, arriving not only from the coast but also from inland valleys. This is our prediction for the 7 of 10, but the pole shift brings a far worse situation of course. Though there will be earthquakes proceeding and accompanying the sinking of the tongue holding Indonesia, it will not require great quakes to allow the tongue to slide. Thus the sinking will be unexpected, as the quakes will not be that notable. It is a slide, not a jolting, that will occur, and it will take place rapidly.

All rights reserved: ZetaTalk@ZetaTalk.com

# ZetaTalk: Bonin Islands

---

*Written January 8, 2010*

*Given the recent swarm of quakes in the Bonin Islands (Magnitude 6.4 Bonin Islands, Japan Region, Wednesday, December 22, 2010 at 21:49:39 UTC) along with those still occurring, should we not be giving more thought to these islands, given their proximity, as being a precursor to the folding of the Marianna Trench? [and from another] [http://en.wikipedia.org/wiki/Bonin\\_Islands](http://en.wikipedia.org/wiki/Bonin_Islands) They lie above a subduction zone between the Pacific Plate and the Philippine Sea Plate. The Pacific Plate is subducting under the Philippine Sea Plate, which creates an oceanic trench to the east of the islands. Most of the islands have steep shorelines, often with sea cliffs ranging from 50 to 100 metres (160 to 330 ft) in height, but the islands are also fringed with coral reefs and have many beaches. The highest point lies on South Iwo Jima, at 916 metres (3,005 ft).*

As with other islands in the Pacific, such as Fiji or the Diaoyu Islands, the small islands along the rising edge of the Mariana Plate or the Philippine Plate will not fare well. There is simply no way to be 100 miles inland for any degree of safety during the tidal sloshing that the pole shift will bring. In those islands that have volcanic mountains, tidal bore will be an issue. Thus, Guam and the Mariana and Bonin Islands are not advised as safe locations. The tipping of the Mariana and Philippine Plates during the 7 of 10 adjustments will cause the eastern coasts on these islands to gain elevation slightly, while their west coasts will lose, commensurately. But during the 7 of 10 adjustments, water will be on the move, seeking its level, and thus could wash over small islands with low elevation. A devastation!

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Indonesia Tsunami

---

*Written December 18, 2010*

*Will Hongkong be attacked by tsunami during the loss of elevation in progress? If yes, is there any first sign of sinking can be noted so that people can head to the hills in time.*

Tsunami and eventual sea level loss are not the same thing, although we have predicted a potential tsunami for the Philippines of 40 feet, and this is our estimate for their eventual elevation loss also. The Mentawai Islands and the leading edge of Sumatra and Java will not experience tsunami, though the water rushing inland may clash and boil. If you place a plate in a bathtub, and push it gently down, water will come from all directions onto the plate, but a tsunami wave is not generated. We have stated that a tsunami during the sinking of Indonesia will race north. There will be a clash of this water pouring in from the Bay of Bengal into the South China Sea, which will go in the direction of least resistance. Since the water is coming from the Bay of Bengal, pouring over the lowering plate, it will not push back against this flow. Water from the Pacific will have poured into the South China Sea as it is lowered.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: China Suppression

---

**Written November 6, 2010**

*This is a Chinese who has read a lot of Zetataalk information which has been translated into Chinese. He doesn't know English, so asking me to help him ask the following question: I am from China, a faithful believer of Zetataalk. Unlike most skeptical people, I believe you and Zetas are absolutely correct and credible. Now I'm eager to get help from you, because only you can help me in this regards. I am going to make up or give up my survival plans according to your information. I have a question to ask zetas, and would like to receive their answers. The question is : After the happening of 7 of 10, will the Chinese Government cut off or block this disaster information on network, so that we know nothing about the 7 of 10 ? If the government does not cut off or block these disaster information immediately, when will it do so? I am very afraid that the Chinese government will block all the disaster information and I can not hear Zetataalk any more. It would be fearful and helpless for me.*

If the China government considered blocking media reports on the pending disaster in Indonesia, they did not consider it for more than a moment. Since the days of Tiananmen Square, when the brutality of the government was photographed and faxed to the outside world, China has been aware that technology and suppression of information flow do not go hand in hand. Since then, China has been further industrialized, the reach of the Internet pervasive. To attempt to suppress the fact of a large scale disaster in the region would prove to be impossible, and ultimately come back on the government, showing their hand. They may not officially ascribe to ZetaTalk predictions, but will not deny reports on a disaster in Indonesia.

**All rights reserved: ZetaTalk@ZetaTalk.com**

# ZetaTalk: Indonesia Volcanoes

---

*Written October 23, 2010*

*The collision between Burma Plate and Indian Plate will get fiercer due to subduction of the Indo-Australian Plate to Eurasian Plate, as the momentum will also push the India Plate. Not only that, between Sumatra and Java (Sunda Straits) sit the Krakatoa volcanoes. And Krakatao was first formed by the subduction of the Indo-Australia Plate under the Eurasian Plate. "Krakatau is ... directly above the subduction zone of the Eurasian Plate and the Indo-Australian Plate where the plate boundaries make a sharp change of direction, possibly resulting in an unusually weak crust in the region." (Wikipedia) Surely overall these would be horrifying for Sumatra and Java, being not solid rocks but clutter, a jumble. So, it seems that we're going to have not only tsunamis (Sumatra) and hurricanes (especially when a plate shifts, does it not create hurricanes?), but also volcanic eruptions (another tsunami in the case of significant Krakatoas eruption). I can imagine how unimaginably horrible the overall outcomes would be with plates dropping and rising putting volcanoes, sensitive to these kind of movements, on highly active mode, if it is so. In the last ZetaTalk Newsletter, The Zetas have indicated that no predictor as to how soon the bending and the dropping will happen for dramatic 7 of 10 to occur other than the direction of plate movement which can be observed from the sinking of Jakarta, Pakistan, and Coral Sea rising. If I don't mistakenly take it literally, it seems that a dramatic Krakatoas eruption would add after some initial without-predictor dramatic 7 of 10. My question is how big would the Krakatao volcanoes erupt? Is it going to be greater force than the one in 1883? Would all these not create a huge havoc, if not prime, in the area of Sunda Straits, where the Krakatoas sit? Would the whole scheme not create a momentum that will activate the Krakatoas greatly? If it erupts at that point, would the eruption be bigger than the 1883 eruption?*

Will Krakatoa erupt, giving warning that the bending of the tongue holding Indonesia is about to begin? Surprisingly, the nervous volcanoes in Indonesia will not increase their eruption much beyond where they are today, during the elevation drop. The reason is because the pressure of plate movement is going elsewhere, in a different direction. Volcanoes erupt because magma is pushed into pockets near the surface, without an opportunity to escape into the general flow of magma that takes place under the plates. Rather than compress the tongue holding Indonesia, the dropping of the tongue allows this tongue to expand, to fan out under the curve of the Indo-Australian Plate. At the present time, the pockets under this edge of the tongue are increasingly compressed, thus the increased activity noted in Indonesian volcanoes recently.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Detailed Information

Written October 16, 2010

*For the past few months I've just been reading this site but now I registered so I can ask a question. Regarding the Indo-Australian plate tipping, I guess no one has asked this question yet: How much elevation will the areas affected by this plate tipping such as India, Bangladesh, Indonesia, Malaysia and Philippines lose? I think this information is important so we can know which higher areas people can go to when the process starts. [and from another] I would like to ask how much of the Philippines, particularly Manila will be affected when 7 of 10 happens? Will there be lots of lives lost? Can you provide more details regarding this?*

We have spoken previously of the areas to be affected by the bending of the tongue holding Indonesia, but can now give more specifics. Draw a line from the city of Hangzhou directly east, and consider this horizontal line the point of bend. This does not mean that points north can rest easy, as when the tongue bends down water from various sides will rush in to fill the void, and these waters will have a rebound in the form of tsunami which can race northward at a height of 20-30 feet. The southern coast of China was likewise warned that they could experience loss of elevation. How much will their coastline drop, that they needed this warning from the Hangzhou UFO? This coastline, in general, can anticipate losing 20 feet in elevation, which will likewise afflict Taiwan though Taiwan is high land and will not be as devastated.

Though the tipping of the Philippine Plate at first gives the islands of the Philippines some relief, as the subduction of

the plate is pushing under them, as the bending of the tongue holding Indonesia progresses, they too find an astonishing loss of sea level. However, other than some small islands and the direct coastline, little of the Philippines will be affected by this rise in sea level, and safety can be gained if the coastal residents head for the hills at the first sign of sinking. Tsunami will affect the Philippines, to a potential height of 40 feet, so a prompt evacuation to be at least 20 miles inland is necessary. If the coast of southern China will lose 20 feet in elevation, the Philippines will ultimately lose twice that much, to a total loss of 40 feet in elevation. Due to the tilting of the Indo-Australia Plate, Bangladesh gains temporary relief from the steady sinking it has experienced the past few years. And the tsunami likely to race northward will not come their way because the waters from the Bay of Bengal will be rushing into the South China Sea, and there clashing to push north. If the loss of 40 feet in elevation is not devastating to the Philippines, it is to the coastline of southern Burma, Thailand, and Cambodia, which have vast areas that will suddenly and permanently be flooded.

It is the southern tip of the tongue which is utterly devastated. Draw a line just north of the Malaysia border and over the top of Borneo. The land on the tongue from this point south will double its elevation loss, so that Java and the islands bordering the Banda Sea will find they have lost a full 80 feet in elevation, sinking many coastal cities and small islands out of sight. Singapore will be awash, its streets hopelessly inundated. Vast areas of the northern coastline of Sumatra and the southern coastline of Borneo will likewise be inundated. And if having the sea rush in were not horrific enough, the sudden drop in elevation will bring with it water from the Indian Ocean and the Philippine Sea which will create turmoil, unpredictable waves that clash and boil. There is no predictor indicating that the bend and drop are about to happen that we could point to. There are, as we mentioned there would be, indicators of the direction that the plates are being pushed, as Jakarta has been sinking, Pakistan sinking, and the Coral Sea floor rising. We are telling you your coastlines are not safe, and the rest is up to you!

***Written October 23, 2010***

*Would the Zeta elaborate a bit how the sea water coming from the Indian Ocean and the Philippine Sea during 7 of 10 will boil? When you say: "And if having the sea rush in were not horrific enough, the sudden drop in elevation will bring with it water from the Indian Ocean and the Philippine Sea which will create turmoil, unpredictable waves that clash and boil. <http://zetatalk3.com/info/tinfo341.htm> 7 of 10 Elevation.*

Boiling water, as seen in a pot, has water splashing about on the surface, bubbles rising up from the bottom of the pan where steam is being formed. This is water with tides moving in multiple directions, in the pot. Super heated water is rising from the center, filled with bubbles that burst on the surface, while cooler water cycles back along the sides of the pot. The concept of the seas boiling is such that water of uneven pressure is clashing, such that water from one source forges through the waters coming from another direction. Such a clash can create water going into a circular direction, seeking to release its pressure, and such circular motion can create huge whirlpools. These are of legend during pole shift times. If the water under pressure is also cold, it tends to create an undertow, creating strange movement on the surface where the surface water seems to be rippling in this or that direction for no reason. Such undertows can be very dangerous. If something on the surface gets caught in the tow, it will not surface for a long time, potentially drowning those in boats or floating on flotsam. Warm water tends to rise to the surface, and if breaking through colder water on the surface, will likely explode there, giving the impression that the seas are boiling.

***All rights reserved: ZetaTalk@ZetaTalk.com***

# ZetaTalk: Folding Pacific

---

*Written November 20, 2010*

*Could you explain a little more about the pacific 'folding' ? It's a big ocean. Will it 'fold' more or less the same from the northern to southern hemisphere and does the folding process create events unique to itself or will these be minor compared to the shift events.*

We addressed the fact that the Pacific plate is not one plate, as assumed. In fact, it is at least four plates. The rise and incident of islands from Kamchatka to Hawaii to the Society Islands shows this to be a plate boundary, down the center of the Pacific. Call that land to the east of this plate boundary the East Pacific Plate. There is also a triangle of a plate between the points of Hawaii, West Samoa, and the Society Islands. Call this the West Pacific Plate. Below the Society Islands is a plate which could be called the South Pacific Plate. And the portion of the Pacific Plate pushing under Japan and pushing under the Philippine Plate could be called the North Pacific Plate. All these plates are folding now, as a close examination of the live seismographs shows. Take a look at where magma sloshing is ongoing!

What we refer to as the folding Pacific is more than this, however. It is primarily the plates abutting Asia. The Mariana Trench will collapse against the tiny Mariana Plate which will tilt and fold to push under the Philippine Plate. The Philippine Plate is likewise tilting to fold and push under the tongue holding Indonesia, which is itself buckling and sinking. Where the Pacific plates are almost constantly adjusting, the north and west Pacific plates riding over the east and south Pacific plates, this is silent and virtually unnoticed by man, who cannot place his monitors under the deep sea. Hawaii is known to be steadily rising, however, as a result of this. Thus, when we refer to a folding Pacific, we are referring to the plates tilting and folding against Indonesia and Japan.

*Written November 27, 2010*

*I was hoping to know a little more detail regarding "the folding of the pacific". It seems the Mariana Trench as the most likely point where this "Fold" occurs. Will this folding cause the Philippine Plate to rise on its eastern side? Seems a lot of elevation in the Philippines eastern ridge - would these rise further or will the drop in the tongue as described prevail - nullifying the folding effect?*

The folding of the Pacific plates that accompany the sinking of Indonesia during the 7 of 10 scenarios involves, as we have explained, the Mariana and Philippine plates tilting and flattening westward. This is nothing more than an existing trend, so is just a matter of the plates moving along faster in the direction they are already going. The Mariana Trench is a zone where the Pacific Plate is subducting under the Mariana Plate. The Pacific Plate curves down at this point, plunging under the Mariana Islands which ride on the Mariana Plate. The trench will be suddenly closed, so that rather than a trench there will be the Pacific Plate scraping along the Mariana Plate, and giving the Mariana Islands a temporary boost up as the plate tilts during this process. The Mariana Plate, thus tilted, will slide its western edge down along the Philippine Plate, as the Mariana Plate subducts under the Philippine Plate and this process will now be accelerating. The Philippine Plate likewise tilts its eastern side up, dropping its western side down. The exaggerated tilt accelerates the subduction of the Mariana Plate, and also accelerates the subduction of the Philippine Plate under the tongue holding Indonesia. The tilting of the Philippine Plate give the Philippine Islands a temporary boost up also, as these islands ride on the eastern edge of the tongue holding Indonesia. Meanwhile, the tongue holding Indonesia has been plunged down, ultimately pulling both the Mariana and Philippine plates down as they fold so the Mariana Islands do not have a permanent boost in elevation. Nancy has explained this as a deck of cards, scattered on a table top, being pulled together into a deck. The plates are folded against one another.

# ZetaTalk: South America

---

*Written November 27, 2010*

*What level or intensity of earthquakes should we anticipate for the São Paulo State, Brazil during the last weeks (not during the PS itself)? This information would help us to better understand possible highway disruptions - trying to avoid being trapped in the big cities. We almost never experience earthquakes, so I am curious about possible ones during the last weeks.*

We cannot be specific as to do so would be to reveal a timeline. We are not, at the current time, even detailing the changes to expect during the 8 of 10. We have given a clue as to what the east coast of S America can expect, in general, in our 7 of 10 descriptions. Where the Andes will experience quakes of magnitude 8-9 during the 7 of 10 due to confrontations with the Nazca Plate, and the northern border of the S American Plate likewise due to the confrontation with the Caribbean Plate, the eastern coast does not deal with these traumas. As the Atlantic Rift continues to rip open, the eastern coast moves with the continent of S America as it presses toward the Pacific. Thus, riding in the rear during those confrontations, it experiences less trauma.

# ZetaTalk: S.America Tsunami

---

*Written July 10, 2010*

*When part of the Caribbean Plate sinks during one of the 7/8 of 10 events will residents of coastal areas from Venezuela to French Guiana be assaulted by tsunami type waves due to the void created by sinking islands in the (southern) Caribbean? Will South America's Atlantic Coast suffer devastating tsunamis during the events associated with the 7/8 of 10 stage (due to a crumbling Caribbean plate); will there be advance warning of such events? Will the Atlantic coastal areas of South America (Venezuela to the bulge of Brazil) have devastating tsunamis when part of the Caribbean plate crumbles (south Caribbean?) during 7/8 of 10 events? How much forewarning will we have?*

Tsunami are generated anytime a plate drops or rises under the sea. When the S American Plate rolls, it will push the Caribbean Plate down, creating a void. The void will primarily be at the southern part of the Caribbean Plate, where islands will suddenly lose elevation, some sinking entirely. This void will pull water from the Caribbean as well as the Atlantic, which would seem to negate the likelihood of a tsunami, but there will be a clash. When the water rushes into the void it is water on the move, with momentum, and this is the tsunami expected along the coastline of Venezuela and its neighbors. This coastline will at first find water receding, but this is a false signal and should not be trusted. The wave will be coming. The islands will have no such warning, but will sink suddenly in concert with the quakes. In that the S American Plate reaches to the center of the Atlantic, the rolling of the S American Plate will seem to have scant impact on those coastlines facing the Atlantic. There will be irregular tides, and certainly earthquakes, but beyond a slight spreading of the Rio Parana river mouth at Buenos Aires, which is ripping apart where the river empties into the Atlantic, there will be little impact.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Major Cities

---

*Written October 9, 2010*

*What major cities will be affected by the South American roll? Santiago, Lima, Buenos Aires?*

Though there have been a lot of precursor signs that S America is getting ready to roll- an 8.8 quake along the Andes in Chile and exploding oil and gas rigs in Bonaire and Trinidad-Tobago - these signs are but the lightest touch compared to the actual event. We have described tsunami that will occur in the Caribbean, and a ripping open of the Rio Parana river mouth at Buenos Aires. The primary effect of the S American roll will be on the small islands in the Caribbean which ride just north of the S America Plate border, as these will lose elevation suddenly, and in some cases sink entirely. Will there be earthquakes? Such movement of a plate does not occur silently. The entire region, from the tip of S America to the islands on the north border of the Caribbean Plate will be jolted, and repeatedly, during the roll. Along the Andes, these quakes will be in the range of a magnitude 8-9, but lesser elsewhere. In that the Andes will rise, riding over the Nazca Plate to the west, no significant tsunami will be produced along the west coast of S America. All major cities in the mountain building areas will experience these great quakes - Santiago, La Paz, Lima, Quito, and Bogota.

Those living along the border of S America and the hapless Caribbean Plate will experience a great moaning and grinding while the S American Plate glides over the Caribbean Plate, pushing it down with its weight as it does so. Such a gliding action does have catch points where the plates are not smooth, and hesitation and jerking with a sudden release occurs, a type of earthquake that seems to last for most of an hour. Caracas as all of Venezuela will experience this seemingly continuous quake, which will approach a magnitude 8 in strength at times. As we have mentioned, the east coast of S America just goes along for the ride. There will be sympathetic jolts from the great quakes elsewhere on the plate, but these will be relatively minor, at most a magnitude 7. When the seaway at Buenos Aires rips open, this is a silent adjustment, as most stretch zone adjustments are. The residents will recover from any earthquakes to see the far shore of the seaway at a greater distance, and the mouth of the Rio Parana widened.

# ZetaTalk: Caribbean

Written November 27, 2010

*I would like to have information on the Caribbean and in particular on my island Martinique which is also a volcanic island. Do I have to expect both flooding and eruption as Edgar Caye mention the Pelée and it is in Martinique. Where is the closest safety area for me?*

That portion of the S American Plate lying to the east of the Caribbean Plate will participate in the roll expected during the 7 of 10 scenarios. The Caribbean islands finding themselves along the eastern curve of the Caribbean Plate will thus experience increased volcanic activity in the many volcanoes that lie on that island chain. The Caribbean Plate will lift, slightly, on its northern edge, while plunging greatly on its southern edge, being pushed down by the overriding S American Plate as it rolls. Of course magma will be roiling, as the pressure from the southern part of the Caribbean Plate being shoved down into the magma will force this magma to go somewhere. It will move in the direction of least resistance, which will be toward the north, and thus it will rush under all volcanoes currently in the Caribbean or in Central America. We have mentioned the tsunami those in this region can expect during the 7 of 10 roll, and large quakes those in the region can expect, but this activity is minor compared to what will occur during the pole shift itself. Those who live on islands in the Caribbean are advised to go elsewhere if they expect to survive what is coming.

Written January 15, 2010

*Thanks so much for all your helpful advice and info! I have a friend who lives in Barbados and was hoping the Zetas might give a bit more detail on the extent of sinking this and the other Caribbean islands might be facing in the next few weeks.*

As can be seen from plate tectonics, Central America is being pushed over the Cocos Plate. When this is done violently during the 7 of 10 roll, the crumbling we have described for these lands will occur. The small islands just to the east of Central America will participate in this crush. The Caribbean Plate will be pushed up behind them, bunched up, fracturing the rock layers so they go in all directions, up as well as down. This is an issue not so much of sinking as of unpredictability. The fate of these small islands is unpredictable. They may survive from the jumble, or disappear

entirely. The hump of the S American Plate intrudes into the Caribbean, and as it moves to the west it will push the Caribbean Plate above Colombia down forcefully. The trend has already been noticed this past year along the Colombian coastline.

Aruba, Bonaire, and Curacao ride on the hump, and thus will survive. The island chain along the eastern edge of the Caribbean Plate was formed when the Caribbean Plate was pushed *up* during expansion of the Atlantic. But this is countered by the hump of S America pushing the Caribbean Plate down, overall. Thus those islands in the chain close to S America will lose in elevation, while those islands at the top of the chain will not. From Antigua south, the islands in this chain can expect a minimum of an elevation drop of 57 feet, on average, with this being irregular throughout due to the trauma to the area. Islands just to the north of S America will be affected the most such that Barbados to Tobago may sink entirely except for the highest points, losing several hundred feet in elevation, and Trinidad will be torn apart in addition to sinking as it rides on the plate border.

A plate, being solid rock in layers, tends to move as one. Thus if the southern part is pushed down, it will tilt, the northern part lift up. The larger islands along the northern part of the Caribbean Plate could be assumed to gain elevation except that the entire Caribbean Plate is losing, overall. Thus the southern shores of these larger islands will experience some elevation loss, where beaches may emerge on the northern shores. To the extent that fracturing is occurring in the plate, as occurs for Haiti, fracturing can be expected. This will be a rough ride for all, with sloshing and clashing water and the Caribbean Plate which at first may seem to rise, then drop as the roll proceeds.

# ZetaTalk: Volcanoes

---

*Written January 15, 2011*

*When South America rolls and Central America is pushed over the Cocos Plate, will this activate volcanoes in Central America or does being pushed over the plate block the flow of magma to the surface? Will new volcanoes suddenly appear where the edge of the Cocos plate is under new locations in Central America?*

Volcanoes erupt when the magma pockets beneath the surface, the source of the spewing lava, are under pressure. This will surely not change during the S American roll, as most of Central America rides on the Caribbean Plate, which will be pushed down, compressed against the Cocos and Nazca Plates, and in some cases crumbled by the sideways pressure. This will also be true of the volcanoes in the Caribbean. Relief will not occur until some days have passed, when the roiling magma has found new pathways for its flow.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Central America

Written March 22, 2010

*I know that the Zetas have said, repeatedly, that all of Central America is a high danger zone, but could they please go into some more detail about what the individual countries can expect? Mexico and Guatemala have greater land mass, so presumably will have some safe zones. However, as one moves south, the land steadily narrows until it gets to Panama, a mere isthmus. I have many friends still living in Costa Rica and Panama, whom I have tried to convince to leave (as I did). But all have said, "no, I'm at high altitude, or in a non-volcanic zone, or it can't be that bad, or you're spouting too much doom and gloom, or it's happening in the Caribbean islands, not here on the mainland", etc. etc. denial, denial. Are there any survivable areas at all in either Costa Rica or Panama, and if so, where exactly? Some of these people are at least open-minded enough to be following your weekly newsletter and would read about safe zones (if any) that they could head toward. And if they read descriptions of events that are pointedly closer to home (combined with the upcoming 7 of 10 events), maybe they'll finally be convinced.*

Where have we failed? We have used words like fractured, crumbled, crunched, experiencing great trauma, dragged along, or ground up. In addition to what will happen to the land mass, we have mentioned exploding volcanoes very near at hand, and water rushing completely over such lowlands as the Yucatan and Panama. How have we failed to relay what is coming? If total destruction does not occur during the 7 of 10, it will during the hour of the pole shift if not before that time. We have described the 7 of 10 as moving the top of S American Plate 250 miles to the west. Not all this movement involves S America, due to adjustments elsewhere, but nevertheless Panama and Costa Rica will be crushed during the 7 of 10 by the grinding movement of the hump as the great S American Plate grinds over it.

Does this bring to mind a ride in a car with a bad set of shocks? The land before you will heave up, up to several hundred feet high, and tumble toward you. This is an example of what we mean by "crumbled". Landslides caused by rain and steep hillsides is not a preview of what to expect! The entire mountain may sheer off and slide into valleys, crushing not just a village or road but all civilization for dozens of miles in either direction, buried under so much rock that rescue is unthinkable. Valleys will simply fold, the mountain ranges coming together and squeezing all life out between them. Guatemala, El Salvador, Nicaragua, and Honduras hardly fare better, though the hump of S America does not grind over them. Rock strata torn apart is not local, but has a reach. They will crumble also, but to a lesser extent during the 7 of 10.

All rights reserved: ZetaTalk@ZetaTalk.com

# ZetaTalk: Mexico

---

*Written December 18, 2010*

*During the South America roll we know that Central America will suffer. How about Mexico, specifically Mexico City? How about the Mexican caribbean? [and from another] Back to the begining of this year - February 8- were "Halo" clouds around Mexico, and the border of Guatemala, Honduras and El Salvador. From Zetataalk Newsletter: [Issue 177](#) one appeared over Mexico on February 10, 2010*

When the Caribbean Plate is pushed west, and pushed down, this will of course greatly affect those Central American countries on that plate. This includes Panama, Costa Rica, Nicaragua, El Salvador, Honduras, and as the plate border cuts through central Guatemala, it too is affected. But Mexico is unaffected by the shifting plates. Except for some interference with tides in the Gulf of Mexico, caused by the dissipating tsunami that will course north when waters rebound over the sinking Caribbean Plate, the N American Plate will be relatively unaffected.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Africa Roll

---

*Written October 16, 2010*

*Reading Z's answers to Oct 9 chat, made me think. Quoting: The sequence of events is, thus:*

- 1. a tipping Indo-Australia Plate with Indonesia sinking,*
- 2. a folding Pacific allowing S America to roll,*
- 3. a tearing of the south Atlantic Rift allowing Africa to roll and the floor of the Mediterranean to drop,*
- 4. great quakes in Japan followed by the New Madrid adjustment,*
- 5. which is followed almost instantly by the tearing of the north Atlantic Rift with consequent European tsunami.*

*If so, the drop of Mediterranean floor (3.) will probably trigger a tsunami in Mediterranean as well. If so, Europe will actually experience two tsunamis: first sloshing East Spain, South France and West Italy (and Africa) and second (the one Z's probably refer to as European tsunami) sloshing West Spain and Portugal, West France, UK, Ireland, Benelux and northern Europe states. Is that correct?*

*Also, European plate goes into African at Crete, so rolling of Africa will likely affect the Greek islands, too. Can we expect major quakes there and Santorini to abruptly erupt, or is this "scheduled" for later stages? How far can pushing of Greece go, will it also cause Balkans to slide under Italy at this stage and Italian volcanos to erupt?*

*The Z's also hinted at "Middle East inferno" a while ago. With some underground fires featured in last week's newsletter, I guess, they are not far either. Where do that inferno fit in? I'd say it follows rolling of Africa in step 3., which makes room for middle east adjustments? On the other hand, tipping of Indo-Australian Plate in step 1. gives some room for middle east adjustments, too?*

The fact that the African Plate, during previous rolls, created mountain building can be seen on a relief map. Morocco and Algeria have mountains due to the rolling in the past. One can see in the mountains of Spain and Italy and the Balcans and Turkey that this was the case there, too, in the past. The Alps themselves were built during previous African rolls. But this time the African Plate will drop away significantly, slipping to the south during the roll. This movement is possible because as the South Atlantic Rift tears open, there is room for the tip of Africa to slid into that void, thus dropping the entire African Plate as it rolls. The African Plate not only moves to the south during this process, it also further to the west, although the southern portion of Africa moves more in this direction more than the parts abutting the Mediterranean.

That said, why would the floor of the Mediterranean just above Algeria be more vulnerable than other areas during this roll? The border of the African Plate slices across northern Algeria, and thus when the plate rolls and drops, the Mediterranean floor there will suddenly find itself unsupported. Where the land mass housing Morocco and Algeria will not lose elevation, in the main, retaining its floatation strength to ride on the magma beneath, the floor of the Mediterranean is of a different composition. It will sink there, unsupported on the African side where the plates will pull apart. The Mediterranean coastline of Algeria will then find more than tsunami worries as they will have a loss of elevation by 12 feet or more. Their coastline is not part of the African Plate. What sinks and what continues to float on the magma beneath is a factor of the rock density, and the floor of the Mediterranean above Algeria has only been floating as it has due to the connection with the African Plate. Elsewhere, where the Mediterranean floor spreads during the roll, the floor is either too deep for a change to be noticed or at a distance from the plate border.

Tsunami will not occur to any ostensible degree because there is a void being created, where the waters will rush. However, turmoil and wave action can be anticipated. The shifting of the African Plate will also not incite any mountain building in Italy or the Balcans or Turkey, as the northern edge of the African Plate is not the solid, jutting line through the center of the Mediterranean that mankind assumes. The sea is deep there, to the south of Italy and the

Balcans and Greece, and for good reason. This part of the great plates has fractured in the past, so that many fault lines lie under the surface, unknown to man until dramatic plate movements begin. The roll of the African Plate during the 7 of 10 scenarios thus spares all but the Mediterranean floor above Algeria! The roll will incite the Arabian Plate to roll also, to some degree, as across from Egypt there will be pressure, but further down the Red Sea there will be a tearing apart, inviting the Arabian Plate to migrate in this direction. However, this is not the disaster we have predicted for Iraq, not yet. Nor will the Afar Triangle, the African Rift Valley, experience changes all that dramatic during this roll.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Plate Movements

---

*Written December 4, 2010*

*As you said that during 7 of 10 Mariana Trench will be compressed and Pacific will be folding it seems the last one will narrow for several hundred meters or even several kilometers. And I can suppose SA will move west the same distance. Then you seemed to state Southern tip of SA will not almost move but the Northern border will do that well. So the tendency is that one part / tip of a plate moves more to this or that direction than other parts / tips. This is true for Africa plate also. Can you say the exact distances that different parts of SA will move west on? And what is for Africa with its movement west and south? If the Northern border of SA moves west for several kilometers will country Panama be partially destroyed?*

The roll of Africa, as we have described, will be more of a twist in place, so that the southern tip of the African Plate shifts somewhat to the west, toward the void opened up by the spreading Atlantic Rift, while the plate overall drops enough that having the top part shift to the east does not do damage along the plate boundaries. The Straits of Gibraltar will open an additional 125 miles and the northern point at Morocco will move 50 miles further east. All points around the northern border of Africa will move commensurately. S Africa will find itself similarly 125 miles further south, and westward by about 35 miles. Indonesia, as we have described, is already buckling and sinking.

But beyond the sinking of the tip of the plate tongue holding Indonesia, the action is not in Indonesia. It is rather in the folding plates, where the Mariana Islands on the lifting eastern edge of the Mariana Plate will tilt and move an estimated 47 miles closer to the Philippine Islands. The Mariana Plate and the Mariana Trench to the east of this plate will essentially disappear, having folded, with only the Mariana Islands in a tentative survival situation. This provides an estimated 125 miles of room for S America to roll to the west, but the plate boundaries in the central Pacific have also been steadily adjusting. Overall S America now has 250 miles to roll, dragging the Caribbean and pushing over the Cocos and Nazca plates before it. This 250 miles is the degree of rip in the south Atlantic Rift, affording the African Plate roll room to maneuver.

We have not detailed our expectation of the degree of tilt or sinking for each and every Caribbean island during the S America roll, nor will we at this time. Beyond what we have stated, that no island in the Caribbean will be unaffected, or that the islands just to the north of the plate border with S America will be the most gravely affected and likely to sink entirely, we are not allowed to say more at this time. Since Panama and the other countries in Central America are situated on the S American plate, they will be pushed over the Cocos Plate with great trauma to these countries. As for S America itself, it sustains great quakes along the Andes and on the northern border which is grinding over the Caribbean Plate. These regions will not experience the sense that they have moved 250 miles further to the west, though this will be computed by man after the roll has been completed.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Chess Game

---

*Written January 1, 2011*

*Your comment on the current '7/10 has arrived' ning: "Africa dropping 125 feet, moving 50 feet further east" Elsewhere the Z's say: "S Africa will find itself similarly 125 miles further south, and westward by about 35 miles." So if i may inquire re the Southern and African portion: Confirm that the Southern tip of Africa will eventually lose about 125 feet. Is this likely sooner now with the 7/10 events - or rather slowly and later e.g. from 8/10 until finally at the shift time? I noted Lagos (Nigeria) and other coastal already reporting some flooding. So with the twist and push of Africa when it rolls "soon" - will the whole African East coast also drop as significantly? (The pivot point of Africa "bending" seems then to be along and up to the rift valley area)*

As the top part of Africa tilts to the east, while it drops, S Africa will not strictly find itself 125 miles further south, but a few miles shy of that mark. Yes, this repositioning of the African continent happens during the 7 of 10 scenarios, but we have not yet addressed the speed with which this will unfold. Nor is the time yet at hand for such a revelation. Too many details allow the establishment to formulate a cover-up, as is happening in Indonesia and Australia right now where rain is being blamed for flooding when the real cause is plate adjustments. The sinking of the lower Caribbean Plates comes first and we have not even detailed just what islands and lands will be most affected by that. You must have patience, as revelation of information is a chess game with the cover-up, which is at present alive and well. Africa of course will find its rift increasing, the Red Sea of course will widen at its southern edge, and other stretch areas along its eastern coastline will expand, as would be expected. This is not expected to drop the elevation of east Africa, however.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Italy

---

***Written November 6, 2010***

*Being thankful for the many informations gived to us by the Zetas on the 7 to 10 event, I would know, if it is possible and without breaking any rule, something about the damages that the Italian peninsula (where I live) will face before the end of the year.*

Italy is fraught with volcanoes, but despite the 7 of 10 scenarios including a roll of the African Plate this will not stress Italy per se. This portion of the 7 of 10 scenarios is not expected to occur in 2010 in any case. The volcanoes in and around Italy are restless due to the many fault lines in the region. They will respond when plate movements occur elsewhere, with increased activity, due to magma sloshing about worldwide. There is more in store for Italy during the 8 of 10 scenarios, but we are not yet ready to reveal these to mankind.

***All rights reserved: ZetaTalk@ZetaTalk.com***

# ZetaTalk: South Africa

---

*Written November 27, 2010*

*The last major earthquake here, registering an estimated 6.5 on the Richter scale, occurred exactly 200 years ago on 4 December 1809. However, the rest of South Africa seems equally at risk of experiencing a fairly big earthquake event. Experts say large areas of the African continent are in an unstable, tectonically active state. The most immediate threat, nonetheless, seems to be centred in Cape Town. Predictions of an imminent 'big one' became more common after a minor earthquake measuring 3.1 on the Richter scale shook these parts in 2003. The day after the 1809 earthquake, people travelled from Cape Town to stare in awe at geysers of muddy water spurting upwards from schisms that had appeared in the earth.*

That S Africa is a seismically inactive location can be seen from the media reaction to a mere 3.1 in 2003, and a history of a 6.5 as being the "last big one". This is not to minimize or ridicule concerns about a nuclear power plant in the vicinity. As we have stated, these power plants have automatic controls that shut the reactor down at the slightest hint of earthquake. They also have redundant electrical systems, to avoid the possibility of an outage disabling the control. Your concerns during the 7 of 10 roll, which will of course jolt Africa, are thus unwarranted.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: The Canary Islands

---

*Written November 27, 2010*

*Canary Islands: Between Africa rolling and the Atlantic tsunami what will be the greatest dangers for these islands during the 7 of 10? Is maybe an eruption of Mount Teide (third largest volcano in the world as I read) imminent? I have relatives that live there and knowing them, I have to choose my approach very carefully or risk alienating them.*

The Canary Islands lies along the border of the African and Eurasian plates, but these giants will not collide during the forthcoming pole shift nor in the plate movements that occur prior to the pole shift. As we have explained, Africa will drop as it rolls during the 7 of 10 scenarios, thus relieving pressure in the region of the Canary Islands. Thus, except for roiling water which will make the beaches unsafe during Africa's 7 of 10 roll, the Canary Islands will survive the 7 of 10 relatively unscathed. Where much has been made of a volcanic shelf from the La Palma volcano, potentially dropping into the Atlantic and starting a huge tsunami heading toward the East Coast of N America, we have stated otherwise. This will be at most an underwater landslide on the island, creating local tsunami only when it occurs. However, the Canary Islands will not fare well during the forthcoming pole shift. Despite some of the islands having an elevation in the interior over 1,000 feet above sea level, anyone on the islands during the pole shift can expect to be washed away by the colliding and wind-whipped waves.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Egypt

*Written January 1, 2011*

*Egypt building new cement towers and walls at its border with the Palestinians. Does the government know about the pole shift and migration of people to Africa through Sinai and covering the story with the war in Palestine? Where can the Egyptians go after the pole shift as the 80 million live in the Nile valley which will be immersed with the Red Sea and Mediterranean sea and Nasr lake after collapse of the high dam and the rest of Egypt is desert? That gives them one way the mountains of Red Sea am I correct?*

When the Africa Plate rolls to the east and drops, during the 7 of 10 scenarios, this will of course affect Egypt and its connection to the Sinai Peninsula. The Straits of Gibraltar will widen by 125 miles, as Africa drops, and Morocco will move 50 miles further east. Where the Sinai Peninsula is considered part of the African Plate, the Red Sea is clearly ripping open. Thus both the Red Sea at the Gulf of Suez and the Gulf of Aqaba tearing up into Jordan will rip open, leaving the Sinai Peninsula positioned like an island with few direct attachments. We have stated that Egypt can find itself in the center of a migration route, as mankind will remember that a handy route into Africa exists there, and that Africa is a rich continent with a high elevation. Portions of Egypt may find itself under water when the sea level rises to 675 above today's level, but most will not be under water. But the crowd of people passing through Egypt will make survival there almost impossible. Any food grown will be taken.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Japan Quakes

---

*Written June 19, 2010*

*The Zetas have stated that the New Madrid fault will adjust prior to the European tsunami and that significant seismic adjustments in Japan will precede the New Madrid adjustment. After the New Madrid adjusts, Mexico/Southern California will "almost simultaneously" adjust, and then corresponding adjustments will occur in the Pacific Northwest of the US and Canada. Where will earthquake, eruption happen prior to the Japan BIG earthquake? [and from another]*  
[http://en.wikipedia.org/wiki/Nankai\\_megathrust\\_earthquakes](http://en.wikipedia.org/wiki/Nankai_megathrust_earthquakes) *The Nankai megathrust is thought to have caused at least 12 great earthquakes in the last ca. 1300 years. Earthquakes involving the A+B segments are generally referred to as Nankai (literally South Sea) earthquakes, C+D Tonankai (literally Southeast Sea) earthquakes and C+D+E Tokai (literally East Sea) earthquakes. The earthquake repeat intervals are generally in the range 90-200 years. "BIG EQ" means Bigger than Magnitude 8 EQ, a series of EQ, Tokai EQ, Tonankai EQ, Nankai EQ that result collapse: house 600,000; Hanshin EQ 25,000 houses; dead:30,000; Hanshin EQ dead 6432! Where will EQ and Eruption in the world prior to BIG EQ in Japan?*

Japan is rattled almost daily by earthquakes of magnitude 5 and 6. It is only when the magnitude is large enough to be classified as a 7 that international news even pays attention. The country has learned to live with such quakes, its infrastructure built in anticipation of earthquakes, and before the modern era, housing was built with bamboo and with very flexible construction designs that can creak and tilt but not shatter. So what would constitute large earthquakes sufficient to be a herald for the New Madrid adjustment? We are speaking here of quakes with a magnitude of 8 or higher, truly in the scale of a 9 but perhaps not called that because of the USGS coverup on quake magnitude. These quakes will rival the large quakes that Japan has historically suffered periodically, but will be characterized by sympathetic adjustments in the Pacific Ring of Fire not normally accompanying large Japan quakes. The whole region will be seen as under pressure from subducting Pacific plates and the reaction to this pressure.

How does this spate of large quakes fit in with the overall scheme of the plate movements that have been described for a movement to a 7 of 10? We are not allowed to say what will come first among the scenarios described, or whether there will be other scenarios that will occur that were not included in the holographic presentation. This presentation described plate movement, not overall impact. It did not include sinkholes or deluge or weather extremes or exploding volcanoes or quakes large enough to ravage cities. We are not allowed to provide the sequence of events, nor warn of just when a particular devastation will strike.

*Written August 21, 2010*

*Can the Zeta's respond to the degree of devastation and affect on population they expect Japan to experience when the series of 8+ magnitude EQ's strike and what regions or cities would be most particularly affected? [and from another] Accepted and will be included with Steve Havas Q about Japan. Yes, this is significant! Displaying seismic activity on line until today's date August 18, there have been 26 quakes between 4.6 and 7.3 magnitude between August 13-18. I find it quite remarkable increase of tremors and earthquakes in the Mariana Islands. Why should so much seismic activity? Is the announcement of a major movement of plates?*

Japan is at the juncture of several plate boundaries. The southern islands are situated on the great Eurasian Plate, and fare the best because this plate is massive and stable. The northern islands are on a tongue of the great N American Plate, but this tongue is likewise stable although it comes under extreme stress particularly at its tip, sometimes called the Okhotsk Plate. It is the pressure from the Pacific that is the issue, as the Pacific is compressing. Likewise, the Philippine Plate is at issue, as it loses in the compression game and in essence is pushed under and lost. The Philippine Plate is tipping, rising at the Mariana Islands and diving under the tongue of the Eurasian Plate that holds Indonesia.

This tongue is itself being pushed down. Imagine the domino effect of the Mariana Trench folding against the Philippine Plate, tipping this sideways to drive the western edge under the tongue holding Indonesia, which is at the same time breaking and bending to subduct under the curve of the Indo-Australian Plate.

This is a domino pressure, happening almost simultaneously. The scenario guarantees that the islands of southern Japan will be doing mountain building, particularly at the point where these plates converge at Mt. Fuji. The pressure from the compressing Pacific is applied directly on the northern islands of Japan, however, where the Pacific Plate is pushing under these islands. Thus when plate movement begins, there will first be a tipping and pushing down and under the south of Japan, and then as resistance here is eased, pressure on the northern part of Japan increases until an adjustment is made there likewise. The great quakes to afflict Japan prior to the pole shift will be thus in the south first, followed by great quakes in the northern islands of Japan with consequent tsunami heading for N America. Just when this will hit, and how much time will pass between the quakes in the south to be followed by quakes in the north, we cannot say.

***Written December 11, 2010***

*I have one question. Where will the epicenter of Japan's two M9+EQ be? Mariana trench or Philippines plate, place that Japan assume?*

The folding of the Pacific (whereby the Marian Trench folds against the Mariana Plate, which folds against and under the Philippine Plate, which folds against and under the plate tongue holding Indonesia) will of course involve Japan in the shocks. How would this not be so? The Philippine Plate is also pushing under the south island of Japan, and the point of juncture at Mount Fiji, a three-plate boundary where the Pacific and Philippine plates slide past each other, will be a focus. The south island will have jolts as the Philippine Plate tilts and pushes under it, and Mount Fiji will also receive jolts as the Pacific Plate reverberates from having the Philippine Plate scrape along its side. These quakes we would place in the magnitude of 8, though they will be downgraded to be in the range of magnitude 7. The north island shocks will be worse, as the Pacific Plate is not going to tilt the way the Philippine Plate did, thus it will ram its way under the north island. Here is where the great shocks will occur, where they will unquestionably be called of a magnitude 8 but will in truth be more akin to magnitude 9 quakes.

# ZetaTalk: Japan Tsunami

---

*Written October 2, 2010*

*Thanks to addressing Northern Island M9+ EQ, tsunami for USA. I would like to know tsunami (by Southern Island EQ, by Northern Island M9+ EQ)*

Will Japan itself have tsunami during its great quakes on the South Island? Where the North Island is on the great N American Plate, and thus generates a tsunami toward N America when the Pacific Plate pushes under it, the South Island has a complex plate joint. The Philippine Plate is pushed under the South Island but rather than have the rise of the South Island force a tsunami toward N America, the tsunami will be forced upon the South Island. This is because the Philippine Plate is tipping at the Marianna Islands side, rolling the water thus against the South Island. Japan is well protected by a tsunami warning system, and these tsunami are not outside of what Japan anticipates, overall.

*Written October 16, 2010*

*What meters will Big EQ (M9+) in southern Island occur tsunami? For Example, in Tokyo, Osaka, and others. Do Japan new government and ISS Japanese crew know M9 EQ and Poleshift and Plane X? Where will be the epicenter of Southern Island EQ and Northern Island EQ? [and from another] <http://en.wikipedia.org/wiki/Tsunami> Tsunamis are a frequent occurrence in Japan; approximately 195 events have been recorded. The Okushiri, Hokkaido tsunami which struck Okushiri Island of Hokkaido within two to five minutes of the earthquake on July 12, 1993 created waves as much as 30 metres (100 ft) tall-as high as a 10-story building. [and from another] <http://www.answers.com/topic/tsunami> In Japan, in 1896, a wave that reached a height of about 65 feet (20 meters) killed about 26,000 people in villages around Sanriku.*

Historically, Japan has suffered tsunami as high as 100 feet. Japan anticipates such tsunami on its South Island, as plate movement is not new, and the direction of movement also not new. However, the tipping of the Philippine Plate will be more extreme this time, so in an abundance of caution those concerned about tsunami should avoid the coastlines that will be affected by quakes in the South Island and allow for a tsunami at a potential height of 100-135 feet. The Japanese government most assuredly is aware of the presence of Planet X and the tight security that the US and major governments have imposed on this information. They have been part of the cover-up for over a decade.

# ZetaTalk: UFO Warnings

---

*Written August 21, 2010*

*So last week there was big sighting in Victoria, BC - someone caught some of it on film: [http://www.youtube.com/watch?v=VQ\\_pudfKDIg](http://www.youtube.com/watch?v=VQ_pudfKDIg) and apparently many others witness the event as well. I am thinking, since the location of the Island is along a fault line - that a message was being relayed to us Victorians regarding Earthquake activity, and perhaps moving into higher ground. Any comments from the Z's would be appreciated, much thanks as always! [and from another] Six unidentified flying objects moving in formation over the Ministry of Finance building in Victoria on the 8th of August 2010 at 23:38 PST. Note the two central craft moving upper right to lower left of screen at 0:21 Clear skies, no noise other than street traffic. <http://poleshift.ning.com/profiles/blogs/ufos-seen-over-victoria>*

Almost identical UFO displays appeared over the skies of Victoria on Vancouver Island on August 8, 2010 and over the twin cities of Minneapolis / St. Paul the next day on August 9, 2010. Since both of these cities are on the N American continent, is some message being delivered? Note that the sightings are almost on the same latitude, and on the same latitude as Japan. We've made the statement that Japan will experience several 8+ magnitude quakes prior to the New Madrid adjustment on the N American continent. These Japanese quakes will allow the northern parts of the Pacific plates to shift, and this has repercussions on fault lines in the N American continent. Vancouver Island will have some jolts, in sympathy, and a sloshing Pacific in the straits off Victoria can be expected. Minneapolis is famous for the bridge snap on August 2, 2007 wherein one of the bridges crossing the Mississippi on I-35 pulled the the bridge where it was moored on the southeast side of the bridge 50 feet to the east when it snapped. Clearly the bridge snapped due to being in a torque twist, though this was not the official explanation. In sympathy with the large quakes in Japan, the slowly tearing St. Lawrence Seaway will likewise snap, once again bringing Minneapolis into the news.

# ZetaTalk: N America Tsunami

---

*Written September 25, 2010*

*For where does the big earthquake of two M9 + in Japan which zeta warned cause a tsunami? I am understanding that the earthquake's tsunami on the island in the north heads for the U.S.*

Any tsunami generated by the great Japan quakes we have predicted will not be outside of what the coastline of N American has experienced in the past, within the memory of many. These are not equivalent to the tsunami to strike Europe. We would anticipate 20 and at most 30 foot high tsunami, and due to the expansive tsunami buoy network, the residents in the areas affected will receive ample and traditional warning. The sloshing in the straits off Victoria, as we have stated, are not tsunami related but due to sympathetic jolts in the rock.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Vancouver

Written September 11, 2010

*With regards to the "sloshing Pacific in the straits off Victoria" the Zeta's explained would follow the 8+ magnitude earthquakes in Japan, how much "sloshing" can be expected? I have a friend who lives water front there who I warned about this and he expressed some concern about this. Would it be the likes of a major tsunami or excessive high, rolling tides? Also would the Vancouver area be greatly affected by this as a number of populated areas are at ocean level. The Ache tsunami was 50-100 feet in height on all continents affected not 20-30 feet. It doesn't much matter the source of the tsunami, whether from earthquakes in Japan or earthquakes from subducting plates off the coast, both can result in deadly tsunami. Any tsunami affecting the strait of Juan de Fuca by default, because a tsunami rolls to all coastlines affected equally, would affect ANY inland WA and Canadian coastline on the Juan de Fuca, and not just Victoria. And how about the Pacific coast of WA. Won't they get hit with a tsunami first? Anyone on the strait, anyone on the sound, anyone on the coast, would want to know, including Vancouver BC, Seattle and the coastal communities of inland WA. Would you kindly please ask the zetas for clarification about their warning?*

Where Vancouver Island lies entirely on the Juan de Fuca Plate, but this plate is not homogeneous. It is composed of different rock strata, and as we have noted in explaining why the Seaway rips as it does on the N American continent, rock strata do not bond firmly to one another. The Strait of Juan de Fuca passes Vancouver Island where 3 different such rock strata abut each other in close succession, and thus the Leech River Fault. A jolt to the Juan de Fuca Plate, because of adjustments in the Pacific following the Japan quakes, will cause these strata to slip. Where this might create sinkholes or other such minor changes in the ground along the Leech River Fault, it will certainly set the deep water in the straits to sloshing. Victoria is at an extremely low sea level elevation, and Victoria West and James Bay which are AT sea level will be swamped by this sloshing. Towns elsewhere along the straits or on neighboring islands have more protection in elevation. Much of Victoria will find water in its streets to a depth of 20 feet, with little warning as the reaction to the Japan quakes will come across the Pacific from plates pushing plates with lightning speed. This is not a tsunami.

# ZetaTalk: Hawaii

---

*Written November 27, 2010*

*How do the Hawaiian Islands fare during the 7/10 events?*

There will be tsunami generated from the great quakes on Japan's North Island during the 7 of 10 scenarios, but these will not strike Hawaii with an immense tsunami. Given the tsunami warning system in the Pacific, this should not take the residents by surprise nor create great devastation. As we have stated, tsunami tend to go around the Hawaii Islands, as there is great latitude to move to the side in the great Pacific, the opposite of tidal bore where water finds itself in a compressed situation with no escape but up. As we have stated, the tsunami generated due to the quakes on Japan's South Island will go against Japan, not across the Pacific. Additionally, the swamping of Victoria on the island of Vancouver is anticipated to be due to jostling water in the straits due to a domino effect from the jolts in the plates across the Pacific, not due to a tsunami. Where the 7 of 10 is not expected to generate severe tsunami for the Pacific Rim, the 8 of 10 has not been detailed as yet beyond the mention of continuous plate movement in some areas. Since the Pacific will be shortening, it goes without saying that there will be tsunami included in the 8 of 10, as we detailed for Puget Sound recently.

# ZetaTalk: New Madrid

---

*Written June 19, 2010*

*In describing events that constitute 7 and 8 of 10 (Plate Movements), do words "radical reshaping [of N.American continent]" and "significant adjustment", applied to plate adjustments, mean that these are the result of ONE event or several, steps and stages, cumulative effect? [and from another] "But the primary drama preceding the pole shift will be the ripping action that a plate unable to move must endure. The notable area of catastrophe during this is the eastern half of the continental US. From Houston to Chicago to New England, the diagonal pull will tear the underpinning of cities and create a catastrophe for the US that will make the New Orleans disaster appear trivial." the above according to [this link](#). When the "pre-poleshift" portion of the rip occurs, is the bordering land of Canada held stationary, while eastern U.S moves south west? I didnt wanna make assumptions based on the description given in the link.*

We have described the plate movements to be anticipated during the hour of the pole shift as a scripted drama, and stated that the plate movement ahead of the pole shift can be anticipated to fall along those lines. Thus, our statements that the New Madrid zone will adjust at the hour of the pole shift was well as before that hour are consistent. The Atlantic is tearing now, thus the Iceland volcanoes, and will tear further well before the pole shift to cause the European tsunami, as we have described. But this in no way compares to the major tearing of the Atlantic that occurs during the hour of the pole shift. The Seaway is pulling apart now, thus the humongous sinkhole just NE of Montreal, but this is no way compares to the pulling apart that will occur during the hour of the pole shift. When we speak of a New Madrid adjustment as potentially part of a 7 of 10 or an 8 of 10 stage, we are not speaking of the pole shift adjustments. Those are regularly referred to as the hour of the pole shift, to differentiate any Earth changes that come before. Prior to the pole shift, the New Madrid will adjust. Canada remains firmly attached at her border with the Eurasian Plate, and thus the Seaway will participate in this pre-shift New Madrid adjustment. But the primary reaction will be along the Mississippi, with bridges failing and land just to the west of the Mississippi dropping slightly. Certainly this adjustment, which may be a series of large quakes, will shatter cities throughout the region and affect cities all the way to the Great Lakes and down into Mexico.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Continue to Adjust

---

*Written July 3, 2010*

*Once the New Madrid starts to adjust. Understanding that the major adjustment will happen first, then smaller adjustments can last maybe weeks and months. My question is, "Will the New Madrid keep adjusting up until the Pole Shift?"*

What is occurring now in the New Madrid area, and the entire area affected by the bowing of the N American continent, are extremely minor quakes, sinkholes, and buckling pavement and settling houses. This is equivalent to the stirring of grass as the tiger begins his prowl. Major adjustments such as we have described for the New Madrid region, including a reach all the way to the Great Lakes and New England area and down into Mexico, is the tiger's roar and leap for the kill. In between are times when the tiger is glimpsed moving along the underbrush or dashing across an open field. There will be what many will consider to be the New Madrid quake awaited, but it will only be such a glimpse of what is to come. After the tiger makes its kill, there will also be times when the tiger will roar from the jungle, letting those who might be tempted to steal its kill know that it is still in the vicinity. Aftershocks, equivalent to the quakes that preceded the big one, the kill, will continue certainly until the pole shift and beyond.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: One Big Jolt

---

*Written July 10, 2010*

*I have a question regarding the impending New Madrid Fault adjustment. I understand that to the east of the fault line the land will rise and that to the west it will sink. Will this happen in an instant as the initial adjustment occurs, or will it happen over the course of hours or even days. Understanding this will help in preparations for it. The same goes for the east coast sinking . Will all this occur within minutes or will the elevation changes take hours or even longer to occur?*

Our description on the pole shift itself describes not a single jolt when the crust stops moving but a series of jolts. Most severe earthquakes are like this, in fact, if one examines their pattern. There are small quakes ahead of time, swarms, and jiggling that unsettles people as they sense something is pending. Then when the rock fingers that are preventing the fault line from sliding or subducting suddenly break, a large jolt. This often, within minutes, results in more jolts as the pressure that was at one point now moves to be pressure at the next point where rock fingers are holding the slippage. Aftershocks result, as yet more rock fingers break, until a point arrives where there is so much resistance to slippage that the quake and its after effects is considered complete.

For the New Madrid, which will include the European tsunami in its effects, there will be one large jolt with a subsequent and almost immediate tearing of the Atlantic. We have stated that the European tsunami will be the largest, but smaller ones will follow in time. Likewise for the New Madrid adjustment, which involve a tearing of the entire N American continent from the seaway down to Mexico. This adjustment will not occur until minor rock fingers have been steadily broken in a number of places. The areas to be affected have already been experiencing quake swarms, buckling roadways, sinkholes, breaking dams, and unsettling jiggling which is unexplained by the authorities. When the primary blockage gives, there will be a huge jolt, with little warning. Aftershocks will continue until the time of the pole shift itself.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: St.Lawrence Seaway

---

*Written August 28, 2010*

*Based on three ZetaTalk notes: [North American Rip](#) (February 10, 2006), [Water Tree](#) (August 16, 2006) and [Minneapolis Bridge](#) (August 2, 2007) it seems that The North American continent will be ripped along two major lines: An east-west rip from St. Lawrence Seaway and Montreal (in Quebec, Canada) to Minneapolis and/or Duluth (in Minnesota, USA), to Rapid City (South Dakota) and the Black Hills (Wyoming). A north-south rip along the Mississippi River, from Minnesota and Minneapolis in the north, via New Madrid Seismic Zone, to New Orleans in the south. Or eventually: From New England to Chicago, via New Madrid Seismic Zone, to Houston. The part east of the Mississippi will move toward the NE, while the part west of the Mississippi will move toward the SW. Will these two rips, meeting in Minneapolis as a "corner", manifest more or less simultaneously? Will the north-south rip end in New Orleans or Houston?*

Indeed, tearing of the St. Lawrence Seaway will occur during the New Madrid adjustment. We have warned that quakes on the West Coast, or the Seaway, or in the New Madrid region will occur before the major quake in the New Madrid region we have referred to as the adjustment on a 7 of 10 level. There will be quakes in these areas, magnitude 4-7, which should not be considered the New Madrid adjustment of which we speak. Please do not ask, at every quake, what this "means". It means the New Madrid adjustment is still pending. When the tension in the N American continent starts to force major tearing of rock strata, so that the changes we have described can take place, this will not be all at once, simultaneously. We have described a series of large quakes, with one major one stemming from the New Madrid area that will be called a magnitude 9 but in truth will be larger. It is this quake that will set in motion adjustments elsewhere.

Mexico will lurch to the west as this major quake occurs, with a settling of land to the west of the Mississippi almost instantly afterwards. The Mississippi will seem to have widened, and those to the west will see a new view as they look east, as their land will have shifted to the southwest as well as dropped. Because the lurch of Mexico to the west actually intensifies the bowing of the N American continent, the Seaway tears open. This is actually various adjustments at weak points along the Seaway rather than the tearing apart into a larger inland bay that occurs during the pole shift itself. Niagara Falls will remain, but some of the inland locks will break. When the upper Mississippi region finds the land to its west slipping down and to the southwest, those parts north which were formerly firmly attached find they can spring northward, as the pressure from the bow had been inclining them to do. This allows the edge of the rip, at Duluth, MN, to tear further inland, with consequent rumpling in S Dakota and minor shifting of ground in all parts in between.

*Written December 11, 2010*

*What will be the consequences on the cities of Detroit, Buffalo, and Toronto during the 7/10 New Madrid adjustment?*

During the 7 of 10 New Madrid adjustment the Seaway will be affected, as we mentioned earlier. It will not tear open to the degree we predicted for the pole shift itself, but weak points along the Seaway will adjust. During the 7 of 10 Duluth will find crevasses nearby, similar to the crevasse that has occurred recently in the Michigan Peninsula, but with greater depth and scope. Inland locks along the Seaway will break. Detroit and Toronto will be unaffected during the 7 of 10 except of course for earthquake damage. As the New Madrid fault line runs up along the Seaway just under the Great lakes in Ohio, cities such as Cleveland and Toledo will find their infrastructure greatly shattered in places as the rock beneath them will jut or drop, vertical adjustments. Buffalo, being virtually on the fault line, will likewise be shattered in this way, such that freeways become useless, but the seaway at Niagara Falls will remain.

**All rights reserved: ZetaTalk@ZetaTalk.com**

# ZetaTalk: NoDoubt

---

*Written September 11, 2010*

*In the Aug 4th ning chat, the Zetas stated that the New Madrid 'adjustment' is the "7 out of 10" event [their exact quote: "We have warned that quakes on the West Coast, or the Seaway, or in the New Madrid region will occur before the major quake in the New Madrid region we have referred to as the adjustment on a 7 of 10 level." ] Yet the poleshift itself may occur many months later, even more than a year later; conversely, it could also occur in this same year (as the New Madrid 'adjustment'). Because the New Madrid 'adjustment' will probably result in numerous bridges being shattered or at least made impassable, it appears that many of us living in cities (where there are at least some jobs) may end up being trapped in them many months prior to the shift, and unable to get to our 'safe spots'. Obviously the Zetas have counseled us ad nauseum to move ASAP, as in yesterday, but they also recognize that for many people that's simply impossible, because most people can't afford to leave their jobs or to purchase land in the rural areas. My QFZT thus is; Can we expect the New Madrid 'adjustment' to destroy more bridges than just those over the Mississippi, the St. Lawrence Seaway, and those that connect the land masses around the Great Lakes? If so, do the Zetas foresee the authorities being able to rebuild them in the intervening time before successive cataclysms and 'adjustments' occur? Altogether, is it theoretically plausible that if we are not in our 'safe spot' (speaking of those living in the cities in the eastern half of the US and on the coasts and banks of the major rivers and lakes) ASAP after the Japanese quakes? It might be almost impossible to think of getting there with our 'bug-out bags' and even meager preparations? It has me thinking that for many of us, we need to be out of the cities way before the last weeks provide naked-eye viewing of PX.*

You misunderstood our statement on the New Madrid quake. We did not say the New Madrid would be the 7 of 10 incident. We stated that this quake would be of a magnitude to be considered at the 7 of 10 level. This, to differentiate between the 5, 6, and 7 magnitude quakes that will afflict the new Madrid and West Coast areas prior to the major quake in the New Madrid area that we state will be the one presented to Nancy in the holographic presentation. In other words, please do not ask us, whenever a 5, 6, or 7 magnitude quake hits, if this is "the one". You will know when the quake of which we speaks hits. There will be no doubt. We likewise, as we have so often stated, cannot give you specifics on date/time/location, so asking how long you will have between the big New Madrid quake and the last weeks is forbidden. We cannot answer, as you know.

Your astonishment that bridges will go down, and not just bridges across the Mississippi, or that people in cities will be at risk is also something we have repeatedly stated. As the Earth changes begin to ramp up, and people do more than intellectually process our predictions, the reaction is to exclaim "tell me it isn't so!" It means what we have stated it means, way back when at the start of ZetaTalk. You are an intelligent man! What do you think will happen to the rest of the N American continent when the New Madrid rip occurs, accompanied by adjustments all along the Seaway? Every city from the Midwest to the East Coast will be affected to some degree. Just when travel restrictions will be applied is in the hands of man, so we cannot predict. But we have always stated that the sooner you are in your safe locations, the better. The choice is up to you.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: West Coast Quakes

---

*Written December 11, 2010*

*Ever since the 7 of 10 scenario and before was disclosed, the last part of the plate movement and after the New Madrid Fault adjusts, it was said that it would unlock the San Andreas Fault which would adjust. Well, before when the Zetas spoke about the pressure the West coast was under with a bow from the Aleutian Islands down to Baja with San Diego at its center, and that this pressure would only be released when the New Madrid Adjusted they said that people in San Diego should be aware and take precautionary measures. I think that there was a sighting of several UFO's as a warning for them. Now that the 7 of 10 schedule has been detailed by the Zetas, The San Andreas Adjustment has virtually disappeared from the conversation and replaced by the North Atlantic tear and the resulting tsunami. It seems to me that it is one of two or more things. Either the San Andreas adjustment pales to the other catastrophic events in the world or that the adjustment is slight even though the fault line runs from Baja to the Puget Sound or it might be that this adjustment takes longer for the plate to move and will happen later in 2011. Could the Zetas comment?*

We have been allowed to state that the European tsunami will happen almost instantly after the New Madrid adjusts. Other than indicate that a slip-side adjustment along the San Andreas will occur after this New Madrid, and occur after the Hoover Dam breaks we have not given any timing clues. Great quakes, such as magnitude 9, should not be expected, but eruptions in the West Coast volcanoes should be anticipated. A slip-slide fault line usually does not move all at once, but in a domino fashion, a bit here, a bit there.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Comms Cables

---

*Written September 4, 2010*

*Most businesses today are highly dependant on having constant network connectivity for real-time transactions and data transfer. Phone lines and fiber optic cables often use bridges to cross the Mississippi river and therefore are part of the network infrastructure. Will the N American Rip essentially divide America in two, transportation and e-commerce wise?*

When our predicted New Madrid adjustment happens, tearing the N American continent at a diagonal from the Great Lakes down to Mexico, more than bridges over the Mississippi will be torn. However, land lines can be quickly re-established when the matter only requires that cable be laid from one side to the other, even with a Mississippi that has been widened by 50 miles below the Illinois border. Those reliant on land lines carried across the Mississippi via bridges will quickly find someone with a cell phone utilizing satellite link, to suffice in the meantime. For those who wish to deny what is coming, any temporary inconvenience will be dismissed. For those taking the Earth changes seriously, this will be considered a walk-up call for those in the area, an example of how quickly their life can be disrupted with delivery of food and supplies suddenly halted and some communication links non-responsive.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: East US Volcanoes

---

*Written January 15, 2011*

*I spent some time researching volcanoes that have been active in the last 10,000 years and marling them on a globe. I noticed that there were none in the Eastern United States but there are some in the African Riff Valley. Can those of us in the Eastern United States expect new volcanoes to erupt when the New Madrid Rips? Implications are obvious since one or more volcanoes in what is now the northern part of the rip will send ash in the westerlies down the entire Appalachian chain.*

No volcanoes will emerge or erupt in the Appalachian chain, either during the pole shift or in the events leading up to the pole shift. Why would the African Rift Valley have volcanoes, when it pulls apart, but not the southeast US? It is both the degree of rip and proximity to the plate border that determine this. In Africa, the plate is hung up at the Red Sea, snagged there such that the parts of the plate that fall below this point must tear away. This causes a greater thinning of the plate along the long rift, which starts at that point. The Appalachian chain is centered in the plate, so that as the stretch pulls down the plate as a whole along its eastern side, there is not a tear but a lowering action. Thus, no volcanoes.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Florida

---

*Written July 17, 2010*

*I had a question about the New Madrid adjustment .I know it said Florida would be pulled down slightly in the video and was wondering what kind of damage can be expected in it from the adjustment. Will it be devastating?*

Florida will lose 150 feet in elevation overall due to the pole shift, but not more than a couple feet prior to the pole shift itself and only inches prior to the week of stopped rotation. The void in the Atlantic that will cause the European tsunami is not enough to release the grip at the Atlantic Rift that maintains stable support for the plates on either side of the rift. Where the Atlantic Rift will rip to a degree sufficient to create a void and thus a tsunami headed for Europe, plate support remains, in the main, due to deeper gripping action along the Rift. The void causing the tsunami is a surface crevasse, in essence. The largest impact on Florida will be due to its connections with the Caribbean Plate. When the S American Plate rolls, the Caribbean Plate will be pushed down, primarily where it abuts the S American Plate. But all land that borders the Caribbean Plate will experience at least some loss of sea level as well.

Surprisingly, Florida escapes the devastation of the New Madrid fault line adjustment. As fault line maps show, the New Madrid will rip from Mexico to the Great Lakes, on the west side of the Appalachian Mountains. The New Madrid adjustment is most devastating to land to the west of the Mississippi, which will drop slightly in elevation along the river and slide to the SW. There is a sister fault line that connects with the New Madrid cluster of fault lines in the Gulf, and then runs up along the eastern side of the Appalachian Mountains. This reaches all the way to Boston, the reason for church bells ringing in 1811. Florida sits in the center of this fault line complex, relatively untouched. There is a reason that Florida is land, where all about her is water. She sits on a finger of rock that is attached to the Appalachian Mountains, and thus this stability during the New Madrid adjustments.

# ZetaTalk: Chicago

---

*Written September 25, 2010*

*I see on the seismic maps that the New Madrid event severe area would be around Memphis or so. How will north from there be affected? Obviously St Louis would probably be affected, but what about further up to Chicago, home to 5 million or so, and the hub of major travel in the U.S.?*

It is known by man that the New Madrid Fault line runs beyond the immediate area of New Madrid. When we stated that "Chicago will rupture and adjust" and "Ohio will be pulled in places" this should not be news to man. The New Madrid runs up along the Seaway, to the mouth of the Seaway, and thus will rupture any land it passes through. Plot its course and consider that more than the fault line itself will be disrupted. Rock detached from its former connections is free to react to the dominant theme in the area. If rock was held down, formerly, it can bounce up. If rock was held back, it is free to spring forward. And adjustment in rock strata means that loose soil will sink or heave. This most certainly can affect a broader area than just the fault line. We have stated that Ohio will be affected most in this regard. These matters are related to the rock strata, which bonds or breaks, as we have stated. There is a natural break in the rock strata holding Ohio, along the Ohio River and into its headwaters, as can be seen.

Why should Chicago be affected. There is a natural break in the rock strata between the New Madrid and Chicago also, a weakness, which will rupture with the New Madrid. When the Seaway pulls apart there will be a drop in support formerly present during rock attachments. Chicago has long been predicted, by ourselves and others, to be devastated. Much of the infrastructure will rupture, causing buildings to crumble and freeways to be worthless and irreparable. One need only follow the geology of the region, to predict what will happen. Do that!

# ZetaTalk: Compared to the PoleShift

---

*Written October 23, 2010*

*Will the 7 of 10 separate the east and west parts of the US completely, from the Gulf of Mexico to the Canadian border? If yes, will the divide within the US be impassable other than via aircraft, at least in the short run? Will Portland OR and Seattle WA be affected greatly during the 7 of 10? ex: sloshing from the Pacific, as in Vancouver? I have read alot of information and it is not clear to me yet.*

Due to the rise in sea level to 675 feet within two years after the pole shift, the N American continent will appear to be two separate land masses in the future. The 7 of 10 will not effect this change, but will tear most bridges on the Mississippi River when the New Madrid adjusts. This will of course affect travel and distribution of goods, but in that the Mississippi employs barges, a workaroud will be arranged quickly enough. But after the pole shift the eastern half of the continent will certainly be more isolated. Travel across the widened seaway by boat, across the flooded Mississippi Valley by barge, and by foot through the swampy land of what is now northern Illinois will certainly be possible. After the New Madrid adjusts, those living in the US should be considering their proximity to loved ones, in this light, the travel restrictions being considered a wake-up call re what is coming if nothing else.

In describing the 7 of 10 scenarios, we do not detail every minor quake or every point where a minor tsunami might be generated. The 7 of 10 scenarios did not even include the major quakes in Japan, which are predicted to be in the range of magnitude 9's. Nor did they include the tsunami that large quakes in Japan always involve, which we have recently stated could be considered to be as high as 150 feet for the South Island quakes. After the New Madrid adjusts the West Coast adjusts, as we have stated. We have not detailed this, as compared to the New Madrid this is minor. All the fault lines closely watched on the West Coast will adjust, the volcanoes nervously watched will erupt, and certainly the waters off the coast will be choppy if not generating some minor tsunami during the plate adjustments. The West Coast of the US is alert and guarded in this regard, as is Japan. They anticipate this type of activity, and will be alert to signs that a quake or eruption or tsunami is pending. Thus, we focus on the larger changes, and in warning those areas that will not receive such services from their governments.

# ZetaTalk: North Atlantic Rips

---

*Written December 18, 2010*

*A question about the Atlantic rift (European tsunami): I found that it might be crucial to know how far up the North Atlantic the rift will go. If, for instance, it will tear up to the longitude of, say, Portugal, it will take so and so many hours for it (tsunami travels about 720 km/h) to reach England and later Norway. If it tears up to Iceland (pity them) it will only be a few hours to reach t. ex. Norway. If it tears all the way up to as far as the rift goes, it will be a matter of an hour or so, before it reaches the northern coastal line of Norway. Norway has a long coastal line, and large cities with many people, will be heavily affected by this, as goes for the other countries in Europe. Have I missed something, because I cannot find the specific details regarding this. Question is, how far up (and maybe "down") will the Atlantic rift (after the New Madrid adjustment) reach?*

Of course the northern Atlantic Rift is most vulnerable at the Azores, where three plates touch and movement in any one of them destabilizes the rift. Africa is tugging to roll to the East, and drop, and will do so before the European tsunami occurs. This makes the separation of the N American Plate from the Eurasian Plate at the Azores and upward quite vulnerable. We have stated that the Atlantic Gulf Stream will carry the tsunami primarily against the coast of the UK, so the major rip point would occur slightly south of the UK in the center of the Atlantic. The top of the rip will be west of Paris. The rip will primarily occur where the hot spots along the Atlantic Rift indicate weakness in the crust, and down to where the African Plate has already pulled away from an attachment to the American plates. Iceland will be spared during the 7 of 10 scenarios.

# ZetaTalk: Tsunami

---

*Written May 1, 2010*

*If I haven't gotten my info mixed up there is prior to the shift going to be a tsunami affecting western Europe caused by the separation of the Atlantic plates. How will it affect Norway, in particular Bodø, where I live? How much warning would I get if this would affect Bodø severely enough to make it necessary to evacuate those I care about earlier than my planned shift bug-out?*

Nancy received a holographic presentation last November, 2009 during which various parts of the globe that will be affected by plate movement were detailed. We have ascribed this set of changes to the approximate timeframe of a movement to a 7 of 10 on a scale of disasters, where 10 is the pole shift itself. Among the disasters was a widening of the Atlantic to the extent that water would rush into the void, and then rebound in the direction the Gulf Stream flows today, from the center of the Atlantic toward Europe. We have estimated this tsunami to be 200-300 feet in height, in wave form rather than a tidal wave, and moving at the typical speed that tsunamis move. Unless there is warning from ships at sea, this would be a surprise to Europe. Obviously, the Netherlands would be in serious trouble.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Gulf Stream

Written June 22, 2010

*Regarding the Tsunami in Europe coming from Atlantic. Other than Portugal, France, Ireland, and Netherlands, facing the ocean, will it affect other countries? What consequences for the Mediterranean Sea?*

After the New Madrid adjusts, the Atlantic will adjust at the same latitude, across from the continental US and from Mexico, which will surge to the west. This would seem to place the tsunami directly across from the mouth of the Mediterranean and Spain and the coast of Africa. But this is not a typical tsunami that like most has a push in a particular direction. Most tsunami results from a plate dropping or rising, and thus there is a bulk of water with more pressure than the surrounding ocean. Thense the rapid movement away from that point of pressure. If land rises the tsunami is moving away from the back of the rise. If land drops, it is moving from where water has rushed into the void, away from the lip of land that rose above the dropping plate.

For the European tsunami, there will be a large void, a spreading apart, not rising or falling land on either side of the fault line. When water rushes in, it will clash in the center of the rift, and rise up. Thus, undecided in what direction it wishes to go, it will be very subject to the existing Gulf Stream, which will propel the excess water pressure in that direction. The Gulf Stream does not go directly into the mouth of the Mediterranean, which in any case could absorb a tsunami impact and dispel it quickly. The Gulf Stream tends to curl in two directions: curling round in a circular motion back upon itself and heading north toward Britain. Where it curls upon itself, the bulk of the tsunami there will return to the rift again, and settle, not causing any perceptible high tides along the African coast or in the Caribbean.

But the thrust northward will continue and will assault the coastline of the UK directly, and secondarily the coastline of France and Norway. France can anticipate a tsunami of 100 feet, Spain perhaps 30-40 feet, the UK 200-300 feet, and Norway 50-75 feet. The full brunt of the tsunami that strikes the UK will also wash through the English Channel, entering the North Sea, and clashing with the any flow coming down from the Norwegian Sea. The lowlands in the North Sea can expect a tsunami an estimated 100 foot high. The speed and force of the tsunami as it reaches these lowlands will be lessened, however, so blockades such as storm doors may be somewhat useful in countries such as the Netherlands. Nevertheless, much flooding will occur, forcing the residents in these countries to face what is coming

for them during the pole shift.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Bristol Channel

*Written October 2, 2010*

*I am in Wales. The UK's largest historical tsunami affected the Bristol Channel (the bit that the Severn Estuary flows into), between South Wales and Devon and Cornwall - it also has the second highest tidal range in the world. I wonder how you see the pole shift affecting this particular coastline, will it be affected in much the same way as everywhere else in the UK, or is there a particular danger along this coast? I'd like to know because I live about a mile from the coast in the Vale of Glamorgan!*

The Bristol Channel will experience tidal bore during the European tsunami. This fact is the reason our estimate for the water height to strike the UK coast was from 200-300 feet. Why this variance, unless there were factors that would affect the water height. Tidal bore occurs when the water has an increasingly more narrow path before it, and thus must rise to accommodate the press of water coming behind it. A bore does not stop until the height of the water pushes back onto the oncoming water with an equal force. Momentum of the oncoming water also is a factor. The European tsunami will be a lot of water, coming at great force and speed. For those who want specifics on just which river bottom or ravine will experience a bore, we suggest seeking the advice of a hydrologist. Models of the terrain can be built, and subjected to water force in a lab pool, for instance. Nancy and ourselves will not have time to address every nitch in the UK. For those who cannot arrange for this analysis, assume the worst case situation, 300 feet in height, and utilize the free Google Maps facility to determine if you are in the red or in the clear.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Irish Sea

---

*Written September 4, 2010*

*Could you please comment on the relative safety of the villages of Wanlockhead and Leadhills in the south of Scotland, both of which are at about 1400ft and are indeed the highest villages in Scotland. We understand that our homes on the Isle of Islay and Glasgow are going to be severely subjected to any European Tsunami, and are urging others to seek high ground. But will the high hills still be subject to tidal bore?*

Since the brunt of the 200-300 foot high European tsunami will hit western England, with only about 100 feet roaring through the English Channel, what will the effect be on Ireland, Scotland, and Wales? The Irish Sea can expect a strong tsunami also, an estimated 150 feet high and pushing strong. All land directly on the coastline and all land that can be inundated up river or into lowlands will be affected. We have suggested that those who anticipate being affected by the tsunami prorate our guidelines for the pole shift sloshing as a guide to where the tsunami might reach. If one must be 100 miles inland and 200 feet up for a 500-600 foot high tide, then for a 150 foot tsunami, assume one-third of this. Given the narrow islands, being 100 miles from shore is hardly possible, so one must assume being 150 feet high at a minimum, and taking into consideration tidal bore up ravines or rivers, 250 feet would be advised. Such elevation exists in Ireland, Scotland, and Wales but the major cities are in lowlands and will have scant warning before the tsunami hits. Ships at sea, giving warning of the approach, are the best bet for an early warning, and such alert ship captains should be on the lookout from the time of the great New Madrid quake, as this will occur within hours of that quake.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Eastern UK

---

*Written August 28, 2010*

*Just a question regarding the European Tsunami that hasn't been addressed yet. I was wondering if the Zetas could give any information about how they expect the tsunami to affect the east coast of the UK given that it is not in the direct path of the wave. They said last week that the tsunami will still have enough power at 100ft high to wash over the whole of Denmark and the lowlands of Germany so the UK east coast must be affected somehow but I hope not as badly. The UK's west coast has high ground to help people to avoid the 200-300ft wave but I reckon a 100ft wave on the other coast would be much more devastating as (even more so that Denmark I believe) it's mostly flat, low ground. In fact Norfolk contains the lowest point in the UK which is a few metres below sea level.*

On July 25, 2007 the people at Stratford on Avon were given a warning via UFO that their region would be subject to tidal bore up the Severn and Avon rivers during the pole shift. Our statement at the time was that the pole shift tide will bore up and into central England, washing over this portion of the island. In that the European tsunami is anticipated to be half the height of the pole shift tides, and washing through the English Channel at a height of 100 feet or more, what can be anticipated at this time for the lowlands of England and the eastern coastline along the channel. Rushing water, under force and moving rapidly, not only floods, it bites. Where the European tsunami might not rush all the way into the lowlands in England's interior it will certainly rush into any lowlands along the eastern seaboard and force up the Thames River to roil London's docks. This will not be a flood, but a scourge, tearing away buildings and docks and all unfortunate to be in its way at the time.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Denmark

---

*Written August 14, 2010*

*In previous chats, the effects of the tsunami on UK and the western parts of Denmark and Norway have been addressed. What about the eastern part of Denmark, i.e. Zealand and Copenhagen, and parts of Sweden and Norway hidden behind Denmark and/or the southern tip of Norway? What will be the tsunami effects, if any, here? With the bridge between Denmark and Sweden, escape from pancake flat Denmark should be easy. How far and high will they need to go to be protected against the tsunami? Should they expect to be able to return to Copenhagen?*

Clearly if the 200-300 foot high tsunami striking the west coast of the UK washes through the English Channel thence into the North Sea at a height of 100 feet, Denmark is in trouble. The tsunami will wash over, around, and through almost everything in Denmark as well as the lowlands of Germany which jut out to form a barrier for this tsunami. Rebuilding is unlikely to take place at all.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Outcome for Denmark

---

*Written September 18, 2010*

*Can you say if it'll be possible for us in Denmark to leave what's left of the country, once the Tsunami has hit Europe? I plan to head to Norway, and have found a small place between Elverum and Trysil, and it seems that inundation post-shift will reach as far as Elverum. I plan to avoid Oslo, knowing that there are pipes with natural oil and gas in the streets, un-insulated, as they've been made in order to keep sidewalks frost-free. I have some concern that they may blow up and cause Oslo to stop being Oslo. Our "normal escape-routes", thus are ferries from the north of the peninsula of Jylland in Hirtshals for Larvik on Norway's south coast. From Grenå, also on the peninsula to Varberg in Sweden. Varberg seems to be just south of the safe zone in Sweden. Then we have a sail-route from Rødby, Denmark to northern Germany. (Of course, sofar, we can also sail to England and Scotland, but that doesn't seem so safe!). The tunnels between Sweden-Denmark and England and France, I don't even dare think of, though I do. Will we possibly be able to fly out? If you care to expand on this, I'll be much obliged!*

As we have stated, Denmark will be devastated by a 100 foot tall tsunami that will roll over this flat country. Whatever was the case prior to this point in time, escape to other countries has now changed. After the tsunami, escape will be either as someone with assets in another country, perhaps an existing Visa or a second home there, or as a drowning rat hoping for refuge. We have often warned that as the Earth changes increase, travel restrictions may be put into place. One should not assume the freedom to move during the last weeks, and in many parts of the world, one should not assume the freedom to move after major catastrophes have occurred. Emergency teams will respond by putting refugees into tents and treating injuries, but they will not allow the refugees to roam about at will, nor travel without the proper paperwork, and this paperwork includes a welcome from the destination.

A characteristic of humans trying to envision a great catastrophe is that they cannot envision the totality. If we have stated that a 100 foot tall tsunami will "wash over, around, and through almost everything in Denmark" then the likelihood of infrastructure surviving is nill. Bridges require firm footings which can be undercut by the force of immense tides, and sections of these bridges will be simply washed away. Have they been built with 100 foot tall tsunami in mind? To even ponder tunnels from Denmark being functional is fantasy. Ferries require a dock to be in place, and ships will hesitate approaching the remains of Denmark because of underwater dangers that could tear their bottoms out. Where helicopters might land to pluck those not drown from rooftops, normal air traffic is a fantasy. The runways will have trenches where soft soil has washed away and be littered, and the fuel deposits polluted with sea water. Consider the totality of the disaster.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Sweden

---

**Written November 6, 2010**

*In view of the forthcoming European tsunami, I have attempted to estimate the tsunami's impact on the southern part of Sweden to the east of Copenhagen in Denmark whose area is about 10000 km<sup>2</sup> and is surrounded by water on three sides. Do not believe that this whole area, which is home to approximately 1 million people, will be directly affected, but certainly more than the western part. Is it reasonable to assume that the wave when it reaches the country is 10-15 meters high? How far inland will the wave reach? Will the wave welling up across the board or only in the ravines and the like?*

The approximate 100 foot high tsunami wave that will rush against and over and around Denmark will find little to stop it in Denmark. What will stop this wave as it rushes against Sweden will be the coastline of western Sweden. That portion of the tsunami that finds its way into the Baltic Sea will dissipate. Sweden's lowlands rapidly climb into highlands, so the tsunami will funnel up ravines, reaching as high and as far inland as Lake Vanern.

**All rights reserved: ZetaTalk@ZetaTalk.com**

# ZetaTalk: France

---

*Written October 30, 2010*

*One thing that I noticed is that no one has asked about the effects of the tsunami on France. If the pole shift wave will race across France to the base of the Alps and given that the tsunami is supposed to half of that, does that mean that the tsunami will reach halfway across France? Anyway, that's my question for the Zetas - exactly how will the tsunami affect France?*

The 100 foot tsunami that is anticipated to strike the coast of France will quickly dissipate over the lowlands abutting the Atlantic in France and even those parts of France abutting the English Channel, which likewise will experience a 100 foot tsunami. Where France deals with sloshing from both the Atlantic and Mediterranean during the pole shift, during the European tsunami there is only a flow from one direction to deal with, not a clash of waters. Baring the factor of tidal bore, which for the coastline of France is not a consideration, tsunami reach should be prorated from the pole shift slosh guidelines. If a 500-600 foot pole shift slosh requires one to be 100 miles inland and 200 feet up, then a tsunami of 100 feet would be a quarter of this. Those who are 25 miles inland and 50 feet above sea level should find they have avoided the tsunami.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Iceland

---

***Written November 6, 2010***

*I looked through all discussions here at Ning chat and at Zetataalk but can't find some information about Iceland. I know that during the last event of the 7 of 10 scenarios, the Atlantic rift will be teared and that causes the EU Tsunami. So what will happen to island during that time? Iceland is located directly on the North Atlantic fault line, so is the whole country going to be split in pieces?*

Iceland has been formed from volcanic rock, over the eons. This is not a violent birth, as the stretch zone just opens up, creating a crevasse. In the case of Iceland, which straddles the border of two large plates, the crevasse fills promptly with magma, which hardens. It does not split into pieces, it grows larger, thus. One can see this in the nature of the rock. Those nervous about this chasm should move away from the plate borders for the duration of the pole shift, moving back only after the magma has cooled.

***Written May 1, 2010***

*How will the area around the arctic circle in Norway be affected by the Atlantic stretch tsunami?*

Surprisingly, hardly at all. A tsunami, by definition, is a large amount of water pushed in one direction. We have explained that the collapse of the Canary Islands will *not* result in a wave traveling across the Atlantic, unlike the current expectation, because when water can dissipate in all directions such a wave does not develop. The adjustment in the center of the Atlantic will be a domino effect of an adjustment in the N American continent, the New Madrid adjustment, thus affecting water at that latitude. The Gulf Stream is pushing water at this point toward Europe, and thus the tsunami wave will be directed. Water disbursing to the north will dissipate.

***All rights reserved: ZetaTalk@ZetaTalk.com***

# ZetaTalk: How to Warn

---

*Written August 14, 2010*

*My question is in relation to the European Tsunami. I would to be able to warn many people about this but know this is not possible but I would like to try and save some people I know. There is no point in warning them now as they will think I'm crazy, but at least when the New Madrid snaps I can make something up, for e.g. tell them that my Geogologist friend has phoned me and warned me about this earthquake and the effect it will have causing a tsunami and the government are not planning to inform people or make up some bullshit story to get them away from the coast, I'd come up with something. When the New Madrid fault lines snaps and widens the Atlantic, how many hours later with the tsunami hit Ireland, the UK and Europe? It will be impossible to warn everyone but at least if I can get the people I know 50 miles inland before it hits then this may save them as it would only take about an hours drive to get this far inland?*

We have stated that the Atlantic Rift will react to a the major adjustment in the New Madrid Fault promptly, within hours, and a tsunami travels within hours to its destination. To gain time, you could effect a white lie, calling them to explain that you heard there is a tsunami warning for the European coastline, but the alert is being delayed for verification or some such. Take care to do this only after the big New Madrid adjustment, following major 8+ quakes in Japan, or you will be accused of crying wolf too often.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: How Far Inland

---

*Written April 4, 2010*

*When the tsunami hits Ireland and the UK, approx what speed will it hit the coast line at, and approx how far in land will the tsunami go as Ireland and the UK will be the first and I am assuming worst hit?*

We have stated that the tsunami that will hit Europe will be from 200-300 feet high at its worst. If the pole shift tidal waves are estimated to strike the coastlines 500-600 feet high, but diminish to 200 feet inland by 100 miles, then assume approximately half this distance and height for the tsunami. Where the tidal waves during the pole shift are essentially the ocean on the move, like a normal tide but with more of a volume of water, a tsunami moves differently as it is a wave in an otherwise quiescent ocean. Thus, tsunami build suddenly at the coastline, and rush inland at wave speed. Assume the same for this tsunami as for all others of record, which man has in its historical records.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Wash Inland

---

*Written August 21, 2010*

*Guadalajara Mexico, and Brandenburgo Germany. <http://www.youtube.com/watch?v=NzjVhuf6Fks> Is this a light show or a battle or teleporting in progress in the UFOS Emitting ray lights video in Mexico?*

As man is well aware, a blinking or pulsing light gets more attention. The times are coming closer when major Earth changes, such as the European tsunami, will be upon mankind, and those making UFO displays are trying to get more pointed, so to speak, in their warnings. This is what these two UFO displays, a world apart, have in common. So do they have a common message? The YouTube on Guadalajara's display mentioned that at one point the light pointed to a ravine. Guadalajara is positioned such that tidal bore from the Pacific would reach this mountain city, despite its elevation. Water will reach the streets of Guadalajara, to the astonishment of its citizens. Likewise for the Brandenburg, Germany display. This city, east of Hanover on the juncture of the Midland Canal and the Elbe River, will find itself awash during the European tsunami despite being 100 miles from the Baltic Sea and twice as far from the North Sea. Both the Elbe River and the cannal will deliver the force of water to Brandenburg, where they will clash and roil. This part of Germany should not be complacent!

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Repeat Tsunami

---

*Written July 3, 2010*

*I would say that the coastlines would be pulled down slightly during the adjustment (meaning all the Atlantic coastlines) but of course the effects of the tsunami will make this adjustment meaningless as who cares if the land has dropped by a couple of feet when there's a 200-300ft tsunami heading your way! Also surmising - the Zetas say that when we are at an 8 out of 10, the adjustments described for the 7/10 events will be happening more continuously one after the other (as per the Iraq prediction) so it is also logical to say that the Atlantic will adjust more than once before the end weeks, meaning more tsunamis, but that the first adjustment/tsunami will be the worst, due to the effect of rock fingers breaking off so after the first adjustment, later adjustments will occur without as much pressure having to build up beforehand. Also that these 7/10 events signal the start of the Zetas prediction that coastlines will become uninhabitable as all the 7/10 adjustments will probably affect the coastlines/oceans to some degree. (beforehand the prediction of the coastlines becoming uninhabitable seemed to be linked more to higher tides and increased storms but, as always stated, they were holding much information in abeyance to stop it being used against the populace.) Would you agree?*

Was our statement that the coastlines of some areas would become uninhabitable prior to the pole shift in regards to the European tsunami and potential repeated hits? This and other coastlines will become uninhabitable because of storms from the sea. The coastlines that have been scoured clean of buildings because of the European tsunami will not be resettled, and not just because of insurance issues. There will be repeated tsunamis, though not as large as the initial one we have described, but enough to keep the populace fearful of a repeat. The severe wobble will also create tides that will assault coastlines in predictable places. Follow where the ocean currents go today, and exacerbate them to get an idea of what areas might be hit. This is not altogether a curse, but a blessing, as residents on those coastlines will have moved inland prior to the pole shift, For them, a life saving manoeuvre.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Reaction

---

*Written September 18, 2010*

*When France and many other countries will be flooded by the Atlantic tsunami well before the PS itself, it will create a great chaos. Nations will be decimated because coasts are very populous, and state structures will fall. What will be the reaction of the French government for example, as France will be one of the most important victims of this cruel event? Will governments around the world declare martial laws or travel restrictions? If yes, must we move before this event to safe places, wait for the tsunami itself, or for other great signs?*

The countries of Europe will react to the European tsunami based on their culture and their ability to react to the catastrophe. What will be almost a universal reaction will be to close borders against refugees from other countries and to restrict social services severely. This approach will be possible because most residents in areas afflicted by the tsunami will be washed out to sea, along with all their belongings. The tsunami will leave a fringe of recoverable disaster where the lip of water drops, but where the tsunami is highest, scoured clean. In some cases there will be great confusion about citizenship. Citizens of devastated Denmark will wash up on the shores of Sweden and Germany, which will likewise have its own drowning citizens. Temporarily, they will have a home. Hosting countries will already have gotten strict about immigration, reversing trends and sending what will by now have become unwanted guests home. This will be true of France, Germany, and the UK.

What should be recognized is that by the time the tsunami hits, there will have been so much devastation around the world that each government will be in shock. The first thought is not how to open their borders and relieve suffering but how to meet their obligations to their citizens. Nations, such as Russia, are already stopping their exports when crop shortages hit. The lack of food stores to feed citizens is already a well kept secret for many governments, and taking in refugees only exacerbates the situation. There will be few offers, well publicized for the public relations value, but mostly there will be silence. Some countries, such as in the UK where vast swaths of land will be scoured clean, will see this as a mixed blessing, from a government standpoint. Yes, they have lost citizen and tax base, but they have also lost pensioners, the injured demanding public health care, and mouths to be fed!

***All rights reserved: ZetaTalk@ZetaTalk.com***

# ZetaTalk: 8 of 10

---

*Written May 29, 2010*

*Could Zeta explain what this new crop circle created in Wilton Windmill, nr Wilton, Wiltshire means?*

Upon examining this crop circle, one will find that the 12 sections never have a line-notch that matches a line-notch on another section. There is no continuity, from one section to another, in these notches. What do the 12 sections represent, and what do the notches represent? Since the Gregorian calendar is universal, we confirm that it is months. The notches represent significant seismic activity, or plate movement. This tends to get hot in one area, and then the stage moves to another area. We are not yet at the point, as will be the case certainly during the pole shift and may be the case during an 8 of 10, where significant plate movement in one area does not start and stop, but just keeps going. Rock fingers are still holding the plates in their current positions, in the main, so there is some movement and then a halt as new catch points take hold. As to whether this crop circle, showing 12 month slices, indicates we have a year of this type of halting plate movement to anticipate, realize that this circle could represent months past, or even a year of past activity. We are certain that there will be a flurry of analysis, thus, on just what pie slice is what month, and just what notch is what earthquake or stretch zone movement. But we predict that no timeline clues will be able to be discerned with certainty from this crop circle.

# ZetaTalk: Little Detail

---

*Written June 5, 2010*

*Does Nancy's vision describe Earth changes from now until the Last Weeks (9 of 10)? Essentially, does the vision represent the 7 of 10 and 8 of 10 event(s)?*

We have stated that a 7 of 10 will arrived by the end of 2010, and that it will include one or more of the incidences presented to Nancy in the holographic presentation. We also hinted, last week, at what might be included in an 8 of 10, specifically oil explosions in Iraq due to plate movement, continuous plate movement (rather than start or stop activity along fault lines), and planetary clash. It would be safe to say that all of the scenarios in the holographic presentation will occur by or during an 8 of 10 stage. What else will occur during an 8 of 10 we wish to hold in abeyance, as it will be more effectively received later when some of these disasters have occurred. Our words would be theoretical now, where later will be received and acted upon not as theory but as fact. Trust us on this matter. We know human nature well.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Iraq Oilfields

---

*Written May 29, 2010*

*Zetas said: "Hold the globe with the left hand on the N Pole, the right hand on the S Pole, and turn in opposite directions first this way, then back. The S Pole pulled back by a grab on the Atlantic Rift in the southern hemisphere with the N Pole held rigid has the Indio-Australian Plate plunging under the Himalayas and Africa likewise plunging into the void, East turning to SE. This does more than pull apart the African Rift, it pulls the entire oil rich Middle East into a skew. How is it that all that oil dropped into the cracks in the rock in that region, eons ago, during prior pole shifts? The rock was shattered, during just such torque maneuvers. Thus, where we stated that something would occur to pull victory from the jaws of the Bush/Blair coalition before the pole shift, something that would take the breath out of the body it would be so dramatic and unexpected, this region is ripe to present many surprises to those who would be kings in the Aftertime." Does that mean Iraq's oil fields will catch on fire soon?*

Certainly at the time of the pole shift, and likely to be in evidence to some degree during any major rolling of the African continent. We hinted that major plate movement would be part of an 8 of 10 stage, and this is when this type of holocaust would likely to start emerging in Iraq.

# ZetaTalk: Blending of the Seasons

---

*Written November 6, 2010*

*My question is about the blending of seasons. Does this apply to all places or just some? I know that members on the Ning have reported blending in their particular parts of the world, but where I live I have not yet yet experienced this.*

The blending of the seasons will be a phenomena that will occur during the 8 of 10 scenarios, in the time prior to the last weeks. Due to the Earth wobble, there are many phenomena in many parts of the globe which could be described as unseasonable weather. Snow in summer has occurred and is on the increase. Very warm days in the middle of winter, more than the typical winter thaw, so that fruit trees bud in winter, ruining the harvest when frost returns. But the blending of the seasons will be characterized by extreme change happening rapidly, one direction to another. What you have had up until the present is trends for more extreme weather. Imagine going from the heat of the hottest summer day to the cold of the coldest winter day, all within a day or so. That is a blending of the seasons.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Continuous Plate Movement

---

*Written September 11, 2010*

*The Moscow underground - how much it is reliable? Destruction of stations before shift is expected? [and from another] To get a sense of what to expect, in general:*

*1-With this ongoing flooding in Pakistan, that Zetas confirmed is due to Indo-Australian plate starting to drop, did we move to a 7? Or is it not yet the event from Nancy's vision, "a significant subduction of India"?*

*2-We know 7 is Plate Movement, and 8 is Continuous plate movement. Would it be correct to suggest that 8 of 10 corresponds with "months before the pole shift" with its Devastated Cities and "emergency management teams exhausted"? What will plates and earthquakes do after 7 and 8, during the last weeks?*

We have stated that the 7 of 10 will "shock the world", and this has not yet happened. Each scenario included in the holographic presentation was the final outcome of a plate movement, not every minor quake or adjustment in sea level elevation along the way! We have stated that the 8 of 10 will involve continuous plate movement in some locations, but declined to detail further and for good reason. We cannot get the public to connect with our description of the pole shift, in the main, as they abstract it and do not process the description emotionally. After the 7 of 10 episodes have occurred, we will have your attention, and then we can give details on what is coming next. Of course the Moscow underground housing the trains will not be standing all the way until the pole shift! This is an example of someone not absorbing our descriptions of the last weeks, when the Earth will be moaning constantly and quakes will likewise be almost constant, everywhere.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Increased Visibility

---

*Written December 4, 2010*

*I was reminded of a comment made by the Zetas - if I'm remembering correctly back during the GLP live chats - that the Zetas have more information they are willing to share, but will not do so until after certain events have taken place. As this would validate their predictions and would help in getting more people to want to listen. As we draw closer to the anticipated 7 of 10 event(s), would the Zetas care to reiterate that statement?*

We indeed have declined to detail the 8 of 10 scenarios, for a number of reasons. The reason publicly given was that until the 7 of 10 had occurred, or at least begun, it would just be another intellectual exercise. The public is not emotionally connecting to our words as yet, but rather reacting in astonishment whenever one of our predictions comes true. The intellectual knowledge of what is to come and the ability to accept, emotionally, the changes when they do occur are two different things. Thus, in essence, our words are lost on the public when we speak of great changes. Rather than waste our or Nancy's time at the present time, we prefer to wait for a more focused audience. But there are other reasons for the delay. There is nothing in the 8 of 10 scenarios that changes the overall picture painted for the public. The pole shift has been detailed, so that anyone in an unsafe area when the pole shift hits knows what to expect. The 7 of 10 scenarios have been detailed for a year, often with great specifics, so the public has been warned of the immediate danger. The 8 of 10, as well as the last weeks, the 9 of 10, are at some point of time in the future.

Given that, why withhold any details about the 8 of 10 scenarios? We have let slip that they will involve continuous plate movement in places, and recently have let slip that tsunami along the West Coast of the US up to 100 feet high can be expected. Likewise, we have recently hinted that increased visibility of Planet X will be part of the 8 of 10 scenarios. Beyond the occasional hint, withholding is also being done as a frank tit for tat with the Puppet Master, who understands this game well. We have stated that information he desires will be forthcoming when, and only when, the public is privy to this information as well. This requires Nancy on TV, on major media, during such revelations. Give us what we want, and you will get what you want. Simple as that.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Italy

---

***Written November 6, 2010***

*Being thankful for the many informations gived to us by the Zetas on the 7 to 10 event, I would know, if it is possible and without breaking any rule, something about the damages that the Italian peninsula (where I live) will face before the end of the year.*

Italy is fraught with volcanoes, but despite the 7 of 10 scenarios including a roll of the African Plate this will not stress Italy per se. This portion of the 7 of 10 scenarios is not expected to occur in 2010 in any case. The volcanoes in and around Italy are restless due to the many fault lines in the region. They will respond when plate movements occur elsewhere, with increased activity, due to magma sloshing about worldwide. There is more in store for Italy during the 8 of 10 scenarios, but we are not yet ready to reveal these to mankind.

***All rights reserved: ZetaTalk@ZetaTalk.com***

# ZetaTalk: Will Complete

---

*Written December 18, 2010*

*The Zetas can say, of course if perhaps. My Q is, the S America/Africa Rolls will be considerable advancement to a 8/10, or it will be the New Madrid adjustment/the European tsunami, or both pair?*

Will there be overlap between the completion of the 7 of 10 scenarios and the start of the 8 of 10 scenarios? The Earth changes are steadily increasing, Planet X steadily closing the gap between the Earth and itself, and thus many of the 8 of 10 descriptors will begin to present themselves before they become full blown. This does not mean the Earth will be at an 8 of 10. The 7 of 10 scenarios will complete before that statement can be made.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Last Weeks

---

*Written March 22, 2010*

*9 day Severe Wobble*

*4.5 days static Lean to the Left*

*2.5 days progression toward 3 Days of Darkness.*

*3 Days of Darkness*

*6 days of Sunrise West*

*18 day of Slowing Rotation*

*6 (5.9) days of Rotation Stoppage*

What starts the process of the last weeks, with all their extreme gyrations, is a threshold being crossed. The dithering we have been describing - where Planet X, the Earth and the other planets caught in the cup (Dark Twin and Venus) are all bouncing around, reacting to movement in another, to crowding of magnetons or other particles - reaches an explosive point. During this time Planet X moves to the right as far as possible, to evade the ever increasing particle crowding, but is still outbound, steadily. Thus, visibility is enhanced, and Second Sun sightings are common. This is the start of the 7.3 week period we described, where it would be unmistakably visible to all on Earth. Venus escapes the cup. The Dark Twin escapes the cup. And the dance of many becomes a deadlock grip by Planet X on the Earth. It is no longer an issue of the Earth wobble or temporary leans to the left of into opposition sufficing. This is twitching about, compared to the last weeks. If the years and months of the Earth wobble were the wrestlers positioning themselves at the edge of the mat, then the last weeks are full contact, and neither can let go of the other. In this, of course, Planet X wins.

When Venus and the Dark Twin escape from the cup, the particle crowding is suddenly eased, allowing Planet X to come forward toward the Earth. The Earth's first evasion is to tilt her N Pole away from the oncoming Planet X to such a degree, and so violently, that she leans all the way over to the left and then rebounds as a reaction all the way to the right. This is the severe wobble, for a length of 9 days, as a recent crop circle has depicted. Finally, the rebound is repressed, for a lingering lean to the left of 4.5 days or so. Then a progression where the N Pole of Earth is pushed away from the Sun and the approaching Planet X, until the point where 3 days of darkness is unmistakable. This progression is another 2-3 days in time. Then the 3 days of darkness and the 6 days of sunrise west, which is a momentum and turnaround for the swing into the 3 days of darkness.

Then the Earth rights herself, side by side with Planet X, and begins her rotation slowdown. It is during this time that the Earth is drawn toward Planet X, so that Planet X quickly increases in size in the skies and is the writhing monster of legend. Slowing rotation is not a linear matter, but exponential as the Earth is pulled closer to Planet X. The Earth moans, groans, and complains as the core pulls at the crust but the crust is gripped, increasingly, and held by Planet X. The slowing is a lurching matter too, as when the Atlantic Rift is exposed, the grip slows the rotation, but when hidden, rotation tries to return. All this causes earthquakes and stretch zone accidents. Emergency management teams are beyond exhaustion, government services are in disarray, and travel has become almost impossible.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: 7 of 10 Begins

---

*Written December 25, 2010*

*Looks like we may have the 1st 'without warning' sinking. Waves 3.5 meters high, then 4.5, then 5.5! High tidal waves blamed for this, and note how wave height is up up and up.*

*<http://poleshift.ning.com/profiles/blogs/december-17-start-of-new> [and from another]*

*<http://www.met.gov.my/index.php?> Strong Northeasterly winds of 40-50 kmph with waves up to 3.5 metres are expected to continue until Wednesday, 22 December 2010. [and from another]*

*<http://www.met.gov.my/index.php?> Strong Northeasterly winds over 60 kmph with waves up to 5.5 metres are expected to continue until Wednesday, 22 December 2010. [and from another] Australia: Monster tide closes CityCat terminals [Dec 22] <http://www.brisbanetimes.com.au/> Low-lying areas have been flooded this morning due to an extremely high tide in the already swollen Brisbane River. [and from another]*

*Extreme Weather in New Zealand [Dec 21] [http://hisz.rsoe.hu/alertmap/woalert\\_read.php?](http://hisz.rsoe.hu/alertmap/woalert_read.php?) Strong winds buffeted Wellington, bringing down trees, trolleybus wires and lifting a trampoline.*

There was clearly a storm, as high winds accompanied the high tides and high waves. But is there more to the story? Nancy has done some research and concluded that there seemed to be no warning for the storm. It did not seem to be documented as a cyclone nor tropical storm, even after it occurred. We stated that sinking in Indonesia would be covered by claims of high tides and storms, and this is an example though scant additional sinking occurred on this day. But more occurred. The Pacific plates, which are, as we explained, not just one but four, compressed, acting as the trigger for the 7.4 quake in Japan. These compressing plates, one plate sliding under another, force an adjustment in the water above, which disburses. Thus Australia at Brisbane experienced a high tide, and lands from the Philippines through Indonesia experienced high waves and choppy water.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Philippines Sink

Written January 8, 2011

*The Philippines is sinking! Certainly the buoys to the east of the Philippines indicate action, as the sea flood is dropping there, water on the rise! The buoys above New Guinea, in the Pacific, likewise indicate a rising sea level. What could this mean?*

There is indeed a relationship between the high waves and flooding in the Philippines in those towns along the eastern coastline and inland with access to the sea. The Philippines have begun to sink, though such sinking is never such that an entire land mass or large island sinks uniformly, so can be deceptive. There is an additional influence from the tilting of the Philippine Plate and continued compression out in the Pacific, so that water is heaped to the east of the Philippine Islands, and is washing over their eastern shores during equalization of the water level. However, this latter is a relatively small influence. The issue with flooding is absolutely due to a dropping in elevation for some parts of

the Philippines.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Queensland Floods

---

*Written January 8, 2011*

*Are parts of Australia along the Queensland coast to be permanently flooded due to elevation loss now?  
There is a quote in the link below that references "this hanging on for 12 months"  
<http://www.smh.com.au/environment/weather/more-heavy-rain-for-flooded-state-20110106-19guy.html>*

The establishment is desperate to prevent awareness of the presence of Planet X in the inner solar system, and has agreed among themselves that blaming rain and storm surge for the sinking of land in Indonesia would be the first volley against the ZetaTalk message. Thus, in Asia, any type of flooding, whether there has been rain or not, is blamed on rain in the media. Unexpected was the flooding in Queensland, as this had not been mentioned by ourselves. Australia was not included in the news blackout issued to cover our 7 of 10 predictions, and thus news of this flooding hit the world. We have explained that the water wash backing up rivers along the eastern coast of Queensland is due to the tilting of the Indo-Australian Plate, but as this phenomena had not been expected, the establishment was taken by surprise.

What does this mean? Is this a permanent state of affairs? That would hardly be the case, as water finds its level and the water heaped around the eastern edge of the Indo-Australian Plate is flowing in many directions to this end. The rivers will soon be flowing to the sea, unimpeded, and the flood waters draining as rapidly as they arrived.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Sumatra

---

*Written January 4, 2011*

*Also occurring simultaneously to the flooding in Medan and the eruption of Mount Sinabung was a 5.7 earthquake along the western curve of Sumatra. Can these three incidences on January 2, 2011 be a coincidence? Hardly. But why would only the eastern coast of Malaysia sink, while the western coast, across from north Sumatra (which is sinking), remain?*

Prior to the end of 2010, starting on December 23, 2010, sinking along the southern coast of Java was evident, with no remission in this flooding a week later on December 29, 2010. Now there is evidence of flooding along the eastern shores of Malaysia and the eastern shores of northern Sumatra. The incidence of flooding on the coastline of eastern Sumatra occurred on the same day as a new volcanic eruption on a volcano previously inactive for 400 years, just 30 miles from the flooding in Medan, and a 5.7 quake occurring offshore along the border with the Indo-Australian Plate nearby. Just the day before flooding along the eastern coast of Malaysia was reported, again only in those areas on the coast or with access to the sea. Why are some areas seemingly exempt from sinking and flooding while others sink?

We have explained that the land masses of Sumatra and Java have been formed from rubble, when the plate tongue holding Indonesia was pushed down and under the curve of the Indo-Australian Plate in the past. Rubble does not act as one, but adjusts more like settling gravel, a bit here then a bit there. Why would the eastern coast of Malaysia be affected, but the west coast facing Sumatra be exempt? The issue of the plate holding Indonesia folding like an accordion came up in November, 2010 when Bangkok, Thailand experienced flooding that refused to drain while a new island merged near Bali. Our explanation was the accordion folding of the tongue holding Indonesia, under intense pressure from the compressing Pacific. Follow the line folding the valley of Thailand down a bit further and you arrive at the eastern coast of Malaysia.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Java Coastline

---

*Written January 22, 2011*

*A youtube video from a commercial plane dated Jan11/11 apparently somewhere over Indonesia shows vast areas of farmland flooded and evidently from the ocean as the shoreline appears to be greatly encroached. Looks very much like land sinking and I've never seen a video like this before with the ocean responsible for the flooding except in tsunami cases.*

*<http://www.youtube.com/watch?v=KC57GD6MZjA>*

*[http://www.youtube.com/watch?v=5MRk\\_-Ifz8](http://www.youtube.com/watch?v=5MRk_-Ifz8)*

*As the Zeta's say the rapid loss of elevation of the tongue has not yet occurred but is going through an iterative and progressive process and will happen soon. I expect the great part of the movement for S. America is pending on the drop of the Indonesia plate tongue. I have a number of friends and family either travelling to S. America or to central America now and in the near future and I have concern for their safety. As the Zeta's were significantly precise for the start of the first step of the 7/10 although admittedly not perfect for the completion part, are they willing to give a re-estimate time for the expected rapid loss of elevation in Indonesia so many are nervously waiting for? (presuming this drop has not yet occurred before new ZT Jan 23)*

Where news reports can clang the insistant message that the flooding is coming from rain causing rivers to overflow their banks, this video clangs the truth far louder. The flooded land is open to the sea, and the Java Sea stands at the same level. Only sinking, or a recent and slow draining tsunami, would create such a visual effect. If a tsunami was the cause, then where are the reports of this? The degree of elevation loss can also be calculated from this video. The approach is from the east, in a plane landing in Jakarta. The companion video, titled "landing in Jakarta" has the same crying baby and even shows the airline insignia on the wing tip. As is clearly identified in the companion video, a major freeway or toll road is flooded on both sides, showing how far the inundation has progressed in Jakarta itself. Only those who have taken the route of denying it all would fail to be impressed by this evidence, notably made available by a private citizen who questions the establishment explanation for the flooding.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: High Tide Excuses

---

*Written January 22, 2011*

*This is not credible. How can people believe that floods can be predicted through March in the Philippines? The cover story on sinking is getting pretty thin. From the article at the link, at some point soon TPTB will have to come clean here. [and from another] <http://www.google.com/hostednews/afp/article/> Hundreds of thousands of people already reeling from floods across the Philippines have been told to expect further heavy rains until March, as the disaster death toll rose to 53.*

Rain has been overused by the establishment as an excuse for the obvious sinking. The establishment is now switching to high tides as an excuse, claiming that a storm surge is creating a high tide. Since the cause of a storm surge can be away from the shore, and not easily determined by the common man busy with his daily activities, this excuse is less easily challenged. The high tide or storm surge excuse will also move to tsunami, blaming a quake in some locale or another. But eventually, when the flood waters do not drain, the truth will out. Pakistan shows the process, as flooding in July was claimed to be slow draining due to continued rain up river, along the Indus River highlands. It was months later, almost half a year later, that it was acknowledged by NASA that the flood waters were not going to drain. The people on the ground, those affected, already knew this. It was not until the issue left the media, and those around the world would presume that the Pakistan floods had receded, that NASA made this admission.

The same process would occur in Indonesia, were it not for what is to soon follow. Our predictions were not just for the sinking of the plate tongue holding Indonesia. They were for islands in the Caribbean to disappear and Central America to be crushed. The locks at Panama are used for shipping worldwide, to bypass having to go around the tip of S America. This will not be out of the news, but will be a continuing subject due to the impact on business. The press does not, in fact, hold the public captive, like sheep, waiting to be told what to think! Look at commerce. Commerce involves a lot of face-to-face meetings and interaction. Phones are used, and cannot be blocked as commerce would likely halt then. The same is true of the Internet, which is used by universities, defence departments, and especially commerce to an immense degree. How do you stop people from talking? How do you stop awareness of the Straits of Gibraltar spreading by 125 miles and Africa moving 50 miles further east?

So of course plate movement will have to be admitted, and to the degree that our predictions are associated with this people will discover ZetaTalk, even without the assistance of the Puppet Master's determination to inform the public and encourage the formation of strong survival communities. We have stated that the establishment will become shrill in attacking our message, and ourselves as the source, as the truth of our predictions comes to light. Look at the past 15 years, since ZetaTalk began. Alternate emissaries or spokespersons have been pushed upon the public, though were not accepted. NASA associates were given the stage to pronounce our theories to be hogwash, and as long as NASA has a modicum of respect this will continue. The Earth changes have been blamed on the Sun, even when the Sun did not cooperate, or on some mythical galactic alignment. The noise level will increase, so that the public increasingly sets about discerning the truth for themselves. ZetaTalk aligns with the facts, and has the track record, and thus will emerge the winner in this war.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Dead Birds and Fish

---

*Written January 8, 2011*

*What is the reason of 100.000 dead fish and dead birds from sky in Arkansas? Unusual "booming noises" were reported in the area, and officials say the birds may have been frightened Possible plate movement? Thousands of tremors have been reported in central Arkansas over the past year. [and from another] 1,000 Dead Birds Fall From Sky in Arkansas [Jan 2] Tons Of Dead Fish Wash Ashore In Brazil [Jan 3] <http://freerepublic.com/focus/f-news/2651186/posts> A survey conducted by the Federation of Fishermen's Colony of Paraná, Paranaguá on the coast of the state, indicates that at least 100 tons of fish (sardine, croaker and catfish) have turned up dead off the coast of Parana*

Dead fish and birds falling from the sky are being reported worldwide, suddenly. This is not a local affair, obviously. Dead birds have been reported in Sweden and N America, and dead fish in N America, Brazil, and New Zealand. Methane is known to cause bird dead, and as methane rises when released during Earth shifting, will float upward through the flocks of birds above. But can this be the cause of dead fish? If birds are more sensitive than humans to methane release, fish are likewise sensitive to changes in the water, as anyone with an aquarium will attest. Those schools of fish caught in rising methane bubbles during sifting of rock layers beneath them will inevitably be affected. Fish cannot, for instance, hold their breath until the emergency passes! Nor do birds have such a mechanism.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: Slower Pace

---

*Written January 22, 2011*

*Do all forecasts the Zetas make have to be 100% accurate. After all, they use historic records, measurements, observations and calculations in order to make their forecasts. Not all that much different from that we humans do, for our forecasts. Only they have very much better science, computers and intelligence than we do. We should not expect them to be God Incarnate. I have great sympathy for them in what they are trying to do for us. They must feel very misunderstood and attacked by narrow minded humans. [and from another] If Zeta's science is not exact in predicting the timing of the events, then the sequence of events and the underlying factors facilitating the world change are what matters in the prediction. However people are educated to see reported facts and results other than underlying factors, Can Zeta comment on this lesson of changing mindset? [and from another] As the Council of the Worlds mandates that an Element of Doubt must remain, I assume that this applies to the members of this Ning and maybe to even your own awareness. Thus I'm surmising that their predictions regarding 7 of 10 that all members seem to be "waiting to exhale" to happen are part of the process of this Element of Doubt. I personally have no doubts about what will happen just the sequence and timing but the Poleshift will occur absolutely.*

Does the need to maintain an Element of Doubt during the awakening process interfere with our prediction accuracy? No, as the Element of Doubt is maintained because the establishment will always engineer some excuse for any Earth changes, trying to negate the impact of our predictions. If NASA says one thing and Nancy says another, who is to be believed? Those who have a need to negate our words, those who do not have the personal courage to face the coming Earth changes and the fact that man is not alone as an intelligent species in the Universe, will cling to NASA's explanations. We have emphasized the sequence, the steps in the process because this is certain. We have detailed the last weeks, the pole shift itself, and are confident in our analysis.

The exact timing is another matter as many factors can cause an acceleration or a delay. We stated with certainty that the 7 of 10 scenarios would arrive by the end of 2010 because we knew the Earth plates were already in a precarious position, just waiting for the nudge. We also knew the process, with a tipping Indo-Australian Plate freeing the plate tongue holding Indonesia, would be the first step. The flooding in Queensland, from the tipping plate, and the simultaneous start of sinking along the southern border of Java, showed this did occur. Why has our timing been off on the length of time it would take for the sinking to complete? Because, as Nancy has pointed out in her newsletters the plates are undulating. This has delayed the process, as when the Indo-Australian Plate tips up below Sumatra and Java, sinking occurs, the tongue sliding under the curve, but when it drops again due to undulation, the sinking process is slowed. This does not change the eventual outcome.

How did we miss this, that undulation might occur? Undulation is like a vibration, a swinging back and forth, and once it starts it tends to continue until resistance, friction, brings it to a stop. One reason that all alien groups, all spirits in contact with mankind, and all valid prophets are restricted from giving the date of the pole shift is due to the inexact nature of any prediction. The factors that need to be taken into consideration are not in the dozens or hundreds of even the thousands. They are in the millions. If you were to predict when and where a tornado might hit during atmospheric turmoil you need only take into consideration a dozen factors. Planets on the move, clashing magnetic fields, the momentum that results, roiling magma, the magma rivers under plates that change their tilt, and elements not even taken into consideration which might suddenly make an appearance - all of this is involved. So we are not perfect, but the process, the eventual outcome, is predictable and certain.

*All rights reserved: ZetaTalk@ZetaTalk.com*

# ZetaTalk: What's Next

---

*Written January 15, 2011*

*Is there a relationship between the recent quakes along the southern Andes and the immense flooding that SE Brazil states are experiencing? They are along opposite coasts. [and from another] Brazil Government Says 100K Displaced by Floods [Jan 8] <http://www.forbes.com/feeds/ap/2011/01/08/> Brazilian authorities say the number of people left homeless by flooding has risen to about 100,000 in four southeastern states. Reports from regional civil defense authorities show Minas Gerais state has been hit the hardest. Eleven more are dead in Sao Paulo state, where 57 cities are in a state of emergency, including the capital. Main thoroughfares in Sao Paulo city were swamped Saturday, and some smaller towns were entirely submerged.*

What is the relationship between recent large quakes along the southern Andes and the horrific flooding in several states in SE Brazil? S America is tugging to the west, along its top side. The trend has been in place for many months, with the Caribbean Plate sinking just above Colombia and in Panama. But as much as there is stress along the northern Andes where the S American Plate slides over the Nazca Plate, there is more stress along the southern Andes. Why would this be? The rolls that S America and Africa will do is primarily at the Equator, where the spreading apart of the Atlantic and the compressing of the Pacific is at an accelerated pace. Thus, the plates to the west of the top of S America have already granted S America room to roll.

But as we have explained, the tip of S America does not roll, but remains nailed in place. This is due to the Antarctic Plate, which also abuts the south Andes. The Antarctic Plate is not compressing, as it is one solid piece. For the top portion of S America to roll to the west, something must thus give, and to some extent this is the southeastern portion of S America. There is already a seaway developing at Buenos Aires. But draw a line from the top of the current quake activity along the southern Andes to the southeast coast of Brazil and they line up! For S America to be pulled in a bow like this, the land is stretched, and stretched land sinks. Thus, where they did have rain, the rain was not excessive to the degree to explain the flooding. The inland rivers are not draining properly, due to the stretch and consequent sinking.

# ZetaTalk: Elite Change of Plans

---

*Written July 9, 2011*

*I want to ask the Zetas whether the ruling and business elites in Singapore have made plans to move to Taiwan once Singapore begins sinking 60 feet under the sea, as the Chinese on both sides are quite close to each other in terms of ancestry and dialect.*

We were asked in 2003 what sites, around the world, had been selected by the elite for their survival bunkers. At the time, Bush was in office and the Earth changes were primarily personified in our predictions, not in actuality. Yes, Planet X had been tracked in from the night sky, from the direction of Orion, and was creating Second Sun sightings during the latter half of 2003. Yes, the weather had begun to be erratic, breaking records, but this was still easily covered by talk of Global Warming, all the rage in those days. Thus, the elite were primarily looking for an ultra-right political climate, a suitable Aftertime climate, a ready and compliant slave labor class, and a defensible position.

At that time, based on the plans of the elite (whom we can read like a book, telepathically), the sites were central Africa, Argentina, eastern Australia, Kazakhstan, and Wyoming. The Bush family was sniffing around Paraguay, and the elite of Indonesia had made arrangements with Australia, in exchange for an agreement to keep the common man in Indonesia trapped in their cities until it was too late. The Arab Spring had not even been imagined, and most emerging democracies in Africa barely had a foothold on a continent used to colonial rule. Our 7 of 10 predictions had not been made public, nor was the reality of a more violent wobble creating weather extremes anything but a prediction in 2003. Crop shortages are now pinching all governments, a second Great Depression has emerged worldwide, and what plate movements do to mankind's infrastructure is now painfully obvious.

The elite, therefore, are no longer comfortable with merely selecting a likely spot and establishing a second home there. It is not a matter of slipping away from life in a big city along the coastline and going to the country home. In 2003, per our White Lie, the elite were assuming that the pole shift would descend quickly, so their chosen getaway sites would be untouched when the time came. Now the elite see a lingering 7 of 10, and in the meantime what they considered firm now seems like shifting sand. Obama has replaced Bush and Obama is not open to inviting the elite into the US, though has been asked by many including the Queen. China has now established Ghost Cities on their vast lands but as a communist country is not in sympathy with the western elite. Now what?

The list of countries considered ideal for the Aftertime has not changed. S America has increasingly become democratic, and all attempts by corporations to turn back the clock to former days when the common man was considered a slave class, and brutal treatment the rule, are not working. Scratch Argentina and Paraguay. Eastern Australia is still seen to have a welcome sign out for the elite of Indonesia and the UK, and as recent news articles show, even the wealthy of the Middle East. The elite of Russia are eyeing not only Kazakhstan but also are now considering the Russian mountains bordering Mongolia, all scarcely populated and within Russian territory. And as interest in the Arab Spring has shown, in particular the interest from France, many in Europe are still eyeing Africa as their safe place.

But the elite are nervous about these changing circumstances, and especially nervous about their ability to travel when the Last Weeks finally do arrive. Many of them now fear a lingering 8 of 10, after the populace has already been alerted to the presence of Planet X by a severe wobble, the Sun and Moon out of place. There are increasing crop failures and a press to migrate that is already growing out of control. Might the mob be at their door? The elite fear that stability anywhere might not be possible, even in a well guarded bunker. They would prefer to live in their mansions and near the coasts until the last minute, but might they then be trapped and unable to travel? They see air travel increasingly risky, and are aware of our warnings about electronic failures. Just when does one dash for the bunkers, without giving the location away? And should one have multiple bunkers, one for every possible location?

Thus, like the common man, the elite are not free of these fears. They worry about travel, about timing, and thus are

making multiple plans. Most often, the elite are trying to secure a local site as well as one at a distance. In many cases, they are trying to get a foot hold in several sites, in case one becomes devastated by a natural disaster or is overrun by hungry and desperate mobs. They may have several at a distance, likewise, in case the political climate changes, or air travel becomes impossible, or giant whirlpools develop in the oceans making travel by boat risky. Thus is it likely that you will find your elite near at hand! Perhaps dressing like the common man, hoping not to be recognized. We have stated that their enclaves will be fraught with pecking order battles, their guards taking over with much brutality. For all their options, they are likely to find, in the end, that they have not chosen well, ending up no better off than the least among you.

# ZetaTalk: Skew in Longitude/Latitude

Written September 10, 2011

About March 11 EQ M9.1 in Japan, why did the land move by about 24 m to the east-southeast, opposite direction?

The 7 of 10 scenarios will result in plate movements, as we have described. Plate borders that are folding under and over each other will cause their lands to reposition themselves, vs a vs the compass or the GPS system or latitude and longitude lines. The Pacific is compressing, which means that *many* countries will find their position has changed. As the Indo-Australian Plate plunges under the Himalayas, India will lose more than elevation, it may find itself skewing slightly to the northeast. Eastern Australia and New Zealand may find themselves with more than an increase in elevation, they may find themselves likewise skewed at an angle, shifting to the southwest.

As the Philippine and Mariana plates fold, any islands carried on the top edges of these plates will find themselves carried to the west. Certainly as the S America roll progresses the countries at the top of S America will find themselves not only out of synch with the GPS system due to the shift west, but likewise with a skew where they have dropped to the southwest slightly. Africa will certainly find itself dropped at an angle toward the southeast. And after the New Madrid adjustment, Mexico and the American southwest will find they are askew too.

And for the northern Pacific, which is likewise compressing, land on all sides of the Ring of Fire will be affected. Particularly for Japan, which is riding over the Pacific Plate *at an angle*, such that as the Pacific Plate pushes under Japan toward the northwest, the land will move to the southeast. The Eurasian Plate is ripping open, stretching, as we have described, and as the Kiev Trumpets clearly show. Thus the land, stretched in many areas across the Eurasian Plate, has *moved* to slide *over* the Pacific Plate, thus putting a portion of Japan's North Island measurably to the southeast.

# ZetaTalk: March 11, 2011 Japan Quake

*Written March 19, 2011*

*Today's M8.9 big EQ is not South Island. M9 that Zetas predict?*

**Sun Mar 13 09:14:05 UTC 2011**

335 earthquakes on this map

As horrific as this quake has been for Japan, it is not the start of the Japan 7 of 10 events we have described. For the 7 of 10 events, Japan must experience a series of quakes, starting on the South Island and then proceeding to the North Island. This quake is of that size, but not in the correct sequence, not yet. The sinking of Indonesia was predicted to occur without significant quakes there, what we called a silent adjustment. The rolling of S America is predicted to have a series of significant quakes in the 8-9 range. The African roll and drop will again be silent and the adjustment of the New Madrid again involving significant quakes in the 8-9 magnitude range. The New Madrid adjustment in particular will be confusing to many, as quakes will increase in frequency and severity, so that quakes of magnitude 6-7 are not uncommon in the New Madrid area before the large 9+ quake that accompanies the tearing of the fault line occurs. Thus quakes can occur before the 7 of 10 adjustment, but not be an indication that the 7 of 10 sequence has jumped ahead.
