*Weekly news and views from around the world and beyond.*

**New ZetaTalk  
Rover Curiosity**

**Earth Changes**

**Announcements**

**Signs of the Times**

The Mar's rover Curiosity made a stupendously successful landing on Mars and immediately began relaying images and data back to Earth. The Zetas of course had been bombarded with questions as to the outcome, in that NASA is an active party in both the cover-up over the alien presence and the cover-up over the presence of Planet X. Their prompt reply on the day of the landing, August 6, 2012 was that - surprise, surprise - Curiosity would "discover" evidence of [life on Mars](#). Why would this be when NASA takes pains to do the opposite, refusing to examine the Face on Mars closely, and denying that UFOs are regularly in evidence in NASA images? Per the Zetas, they and the elites wanting to ride out the Pole Shift on Mars want *funding*, taxpayer funding, and want Obama pressured by the public to support this.

**ZetaTalk [Comment 8/6/2012](#):** *Though the Council of Worlds [imposed a quarantine](#) in the past to keep mankind and the Annunaki apart, this quarantine did not preclude mankind's exploration of Mars nor the discovery of the Annunaki's presence in the past. We mentioned recently that the elite are [still interested](#) in going to Mars to escape the Pole Shift chaos on Earth. The elite are interested in having NASA put forth the [taxpayer funds](#) and personnel to prove that the trip would be safe. Will this rover suddenly discover evidence of past life on Mars? That is almost a given, since the elite realize that without avid public interest additional funding for NASA ventures would not occur. Methane gas, which is evidence of bacteria and plant life in the past, will be admitted, though it has been uncovered during past exploration. Glimpses of structures that imply hominoid visitors in the past may also be allowed, and certainly the abundance of water underground on Mars will be confirmed. All to force Obama to provide continuing funding!*

Why would the rover be allowed to land on Mars, but Russian satellites fail to boost into orbit? Several UFOs were filmed zipping around at the launch, and could hardly have been missed, very obvious. The satellites were to serve Indonesia and Russian territory, and desperate and drowning migrants from Indonesia are expected as the Earth changes progress. Could there be a relationship? Per the Zetas, this is

absolutely the relationship. Curiosity on the other hand will promote the Awakening, but won't provide the elite with the NASA funding from taxpayers the elite seek. Thus one was allowed, while the other was scuttled.

Russian Booster Rocket Fails to Deliver Satellites  
August 7, 2012

<http://www.nytimes.com/2012/08/08/world/europe/russian-booster-rocket-fails-to-deliver-satellites.html>

*A Russian booster rocket carrying two telecommunications satellites malfunctioned during a launching, failing to deliver the satellites into their proper orbit and rendering them useless and unsalvageable. The satellites, worth about \$45 million, were intended to provide telecommunications services for Indonesian and Russian customers. They were carried by a Proton rocket, with a Briz-M booster, launched from Russia's Baikonur space center in Kazakhstan. One of the lost satellites, called the Telekom-3, was the first Russian-made satellite bought by Indonesia. In May, a Russian-made Sukhoi Superjet 100 airliner crashed in Indonesia during a demonstration flight for potential buyers.*

**ZetaTalk Comment 8/6/2012:** *There are many agendas behind the Mars rover, but the only one that will come to fruition will be to announce the discovery of life on Mars. Methane from rotting organic material, bacteria and mold, and perhaps even living worms in the soil. The elite are trying to force Obama to get the US taxpayers to pay for manned missions to Mars, and this will hardly work given the current state of the economy and the pace of the Earth changes. But the Awakening to the alien presence will be facilitated. Russia was recently smacked by the Council of Worlds for trying to probe Phobos, a moon of Mars where the Annunaki have been mining for gold. The Annunaki and mankind are quarantined from contact with one another, and the Russian's know this. The Telekom-3 communication satellite that was disabled was hardly designed to facilitate communications, it was intended to spy on desperate and drowning migrants heading toward Russian territory, the better for Russia to disable them.*

## Moon Swirl Correlation

When Planet X came into the inner solar system in 2003, brilliant [Second Sun sightings](#) occurred and were captured on film. Then Planet X moved closer to the Sun and was lost in the glare, though brilliant [Moon Swirl orbs](#) would appear on occasion, seen naked eye by an [astonished public](#) and captured on film. Lately the Second Sun rising and setting is being captured, as depicted recently on the [Mawson webcam](#) in Antarctica, and brilliant Moon Swirls are definitely apparent, showing up on photos from around the world even when no solar filters are used.

Note the correlation in photos from Brazil on [July 27, 2012](#) and California on [July 30, 2012](#) and another from

someplace in the USA on [August 2, 2012](#). The placement of the brilliant and *huge* Moon Swirl to the left/top of the Sun appears in all. The California photographer moves his cam around so the lens flares can be easily distinguished. The Moon Swirl remains firmly in place at the 11 o'clock position. Moon Swirl orbs cast their brilliant light, like the light that comes out the end of a flashlight, when the long tube of the swirl is pointed toward Earth. Sunlight bounces down the walls of the tube and is focused out the end.

Alberto, in Italy, the Father of the Red Filter Revolution, has steadily taken photos both behind mylar and the red film from the inside of an old floppy disc. On [July 24, 2012](#) using a mylar filter, and again on [July 25, 2012](#) and [July 27, 2012](#) a brilliant Moon Swirl to the left of the Sun was consistently captured. Switching to the old familiar red filter from a floppy insert, on [July 29, 2012](#) to [July 31, 2012](#) the Moon Swirl orbs and other tail elements are showing up to the left and above the Sun, confirming what others have captured during the same period.

A week later, by August 7, 2012 that bright Moon Swirl had swung up to be above and to the right of the Sun, the tail waft swirling in the [retrograde \(clockwise\) motion](#) that Planet X itself assumes for rotation and orbit. Alberto's photo was also [given a correlation](#) by another red filter photo from Warsaw, Poland! Same date and virtually the same time of day!

**ZetaTalk [Description](#) 4/21/2006:** Planet X has a couple dozen moons, and they form into seven moon swirls which go into tubes as they swirl around each other, and from the side look like a tube. From the front, as the sunlight is bouncing down through these tubes, they can look like a bright orb in the sky because its capturing light and focusing light as though mirrors are lining the inside of these tubes. Thus, more intense light reaches the viewers eyes. Planet X has a retrograde rotation as well as a retrograde orbit.

### Madagascar Chevrons

Why are the Madagascar Chevrons suddenly under inspection? Chevrons along coastlines composed of ocean sediment have been theorized to be caused by big asteroids or comets crashing into oceans causing a tsunami, but scientists now state their theories don't hold. Why the turnaround? Per the Zetas, scientist have found that these Chevrons fit better with the ZetaTalk explanation of Pole Shift tides, and want the world to wake up to what is coming.

#### Giant Dunes, not Mega-Tsunami Deposits?

August 5, 2009

<http://www.earthmagazine.org/article/giant-dunes-not-mega-tsunami-deposits>

*About four years ago, a group of scientists proposed that a series of giant, wedge-shaped sandy deposits found along the shores of southern Madagascar might be evidence of a giant tsunami — a “mega-tsunami” — generated by an asteroid that may have blasted into the Indian Ocean sometime in the last 10,000 years. As a tsunami approaches the shore, the wave becomes more or less parallel to the shoreline and it will wash straight in. But the Madagascar dunes formed at a high angle to the shore.*

#### Ancient Crash, Epic Wave

November 14, 2006

[http://www.nytimes.com/2006/11/14/science/14WAVE.html?\\_r=3&pagewanted=all](http://www.nytimes.com/2006/11/14/science/14WAVE.html?_r=3&pagewanted=all)

*Scores of such sites have turned up in Australia, Africa, Europe and the United States, including the Hudson River Valley and Long Island. The chevrons all point in the same direction to open water. Half the myths talk of a torrential downpour. A third talk of a tsunami. Worldwide they describe hurricane force winds and darkness during the storm.*

**ZetaTalk [Explanation](#) 8/11/2012:** Chevrons formed from ocean deposits along coastlines are yet another absolute proof that the Earth has experienced regular crustal shifts in her recent past. The pattern in the Chevrons is from the sloshing in the oceans we have predicted - high force, single direction, and height. Scientists who refuse to consider that periodic Pole Shifts happen to Earth struggle to explain them. It is only the large tidal waves we have predicted and described, where the entire ocean is on the move, that such sediment can be swept inland. The tides during the Pole Shift will rise 500-600 feet along coastlines, not crashing down but steadily pushing inland. Why are the formerly prevalent theories just now being challenged - that these coastal Chevrons were caused millions of years ago or were formed by tsunami from comets? Scientists aware of ZetaTalk and the presence of Planet X are taking our warnings seriously, and looking for evidence with which to educate the public.

In his book *Earth in Upheaval*, Velikovsky recorded plenty of evidence that such tidal waves have washed inland. Whale bones are found in the hills along the St. Lawrence Seaway at the 500-600 foot height that

the Zetas state the Pole Shift flood tide can rise. Velikovsky has also recorded folklore in his book *Worlds in Collision*, where natives worldwide report that high waves crashed inland. Clearly, these were times of a Pole Shift, with a long period of darkness preceding the tide.

**Earth in Upheaval, by Velikovsky, Chapter: Whales in the Mountains**

*Bones of whale have been found 440 feet above sea level, north of Lake Ontario; a skeleton of another whale was discovered in Vermont, more than 500 feet above sea level; and still another in the Montreal-Quebec area, about 600 feet above sea level. Although the Humphrey whale and beluga occasionally enter the mouth of the St. Lawrence, they do not climb hills.*

**Worlds in Collision, by Velikovsky, Chapter: The Tide**

*The traditions of the people of Peru tell that for a period of time the sun was not in the sky, and then the ocean left the shore and with a terrible din broke over the continent. The Choctaw Indians of Oklahoma relate: "The earth was plunged in darkness for a long time". Finally a dark light appeared in the north, "but it was mountain-high waves, rapidly coming nearer". According to the Lapland epic, after the sea-wall fell on the continent, gigantic waves continued to roll and dead bodies were dashed about in the dark waters.*

The Zetas have stressed that the Pole Shift tides are *not* a displacement wave which results when a object is dropped into the ocean and waves move in all directions. It is also *not* a tsunami wave, which is water from adjusting plates that have either fallen or risen thus pushing water rapidly in one direction. A tsunami moves toward a shore like a ripple, then rises up as a tall wave when the water reaches the shore. The Pole Shift tides are the entire ocean on the move, like a steadily rising tide that eventually reaches great height on the coast, and flows potentially hundreds of miles inland before reversing and returning. The Zetas have advised that people should be 100 miles inland and 200 feet above sea level to be safe from these sloshing tides.

**ZetaTalk [Explanation](#) 6/15/2001:** *In Tsunamis, a single line of pressure moves through the ocean, transferring water pressure rapidly from the quake point to where it must stop, at land, thus finally crashing upon a beach. Asteroid generated waves are thus tall, crashing upon the shore. Whale bones on mountain tops well inland were not lifted by Tsunami waves, nor carried inland atop such a wave. During a pole shift, there is no single line of pressure, the ocean as a whole is on the move because it stays behind while the crust moves, and thus rolls up on land onto the coastline being pulled under it. This is a flood tide, with the lip of the water being its highest point, rising like a silent tide endlessly on the rise, the wave rolling inland without a crashing back and forth, just a steady progressive inundation. Whale bones on mountain tops well inland were not lifted by Tsunami waves, nor carried inland atop such a wave. A whale would not be close enough to the shore to be caught in such an occurrence. They arrived at these inland mountain tops because the entire ocean was moving, and they could not escape the momentum. Thus caught, they were deposited in rocky crags where fast flowing waters moved quickly away from them through cracks, too tight a squeeze for the hapless whale left floundering behind.*

## **Without Meat**

The price of beef, chicken, pork, and farm raised fish will all rise in the US because of the recent drought, making these sources of protein increasingly unavailable for many, due to the cost. Grass has dried up and died, so grazing and collecting hay is impossible. Grain crops have failed, so corn fed beef may be a thing of the past, and chickens, pigs and fish in ponds don't live on air and water.

### Chronic Drought to Become Commonplace, Scientists Warn

July 30, 2012

<http://www.ctvnews.ca/sci-tech/chronic-drought-to-become-commonplace-scientists-warn-1.897746>

*Projections indicate that drought events of this length and severity will be commonplace through the end of the 21st century.*

### U.S. Ranchers Sell Cattle as Drought Spreads

July 24, 2012

<http://www.ctvnews.ca/business/u-s-ranchers-sell-cattle-as-drought-spreads-1.890891>

*Cattlemen throughout the middle and western part of the U.S. also are selling animals they can't graze or afford to buy feed for. Beef from the animals now flooding livestock auctions will start showing up in grocery stores in November and December, temporarily driving down meat prices. But then prices are expected to rise sharply by January in the wake of dwindling supplies and smaller livestock herds.*

Meatless meals will become a priority. The Zetas have long warned of crop shortages in the years prior to the Pole Shift. Looming food shortages were predicted in [Issue 120](#) of this newsletter on February 15, 2009 and crop shortages as the cause were reported in [Issue 165](#) of this newsletter later that year on December 27, 2009. At the start of the ZetaTalk saga in 1995, the Zetas urged the common man to get into gardening, learn how to save seed, keep flocks of chickens or goat herds if possible, and get used to being self-sufficient.

**ZetaTalk [Advice](#) 7/15/1995:** *Those groups who have prepared, and are relying on themselves and their own carefully tended gardens, will not find themselves pinched between starvation and hostilities. Fortunately, the easiest produce to grow is that most economical as foodstuffs. Humans have but to return to their recent past and relearn these lessons.*

**ZetaTalk [Prediction](#) 7/15/1995:** *Of course, leading up to the cataclysms, not all produce will fail. Greenhouse crops will come through. Backyard gardens, tendered carefully by watchful eyes, will survive. But the large cash crops that supply crowded population centers will find little to market, and the prices will go up accordingly. Should the reader think that planting and harvesting will go on as before, they should realize that the gloom that follows a cataclysm is devastating to vegetation. If vegetation survives the droughts that precede the cataclysms and the hail and firestorms and high winds that occur during the cataclysms then it must next survive an almost continual deluge and lack of sunlight.*

Why are lysine rich vegies important? Because those vegetables and grains that carry the lysine protein allow a vegetarian diet to have the same protein value as red meat! Lysine is a necessary protein usually missing from a vegetarian diet. Soy, peas, legumes, buckwheat and amaranth are among the recommended vegies with lysine.

#### Amaranth

<http://www.aaobfoods.com/graininfo.htm>

*Amaranth has the highest lysine content of all the grains in this study with Quinoa coming in a close second. To make your whole wheat bread a complete protein, substitute about 25% of your wheat flour with Amaranth flour. Just 150 grams of the grain is all that's required to supply an adult with 100% of the daily requirement of protein.*

#### Buckwheat

<http://www.aaobfoods.com/graininfo.htm>

*If you use half buckwheat flour with your wheat flour, the buckwheat's amino acids will round out the limiting amino acids in your wheat nicely, giving you a nearly perfect balance of the 8 essential amino acids. This particular balance between half wheat and half buckwheat flour is much more closely aligned to your dietary needs even than lean beef!!!*

#### Protein

<http://www.veganhealth.org/articles/protein>

*Legumes are the foods highest in the amino acid lysine. Tofu, tempeh, and soy meats are the highest, followed by other legume foods.*

What should be noted is that by combining vegetables and grains, one can make the equivalent of red meat! Rather than feed your corn to cattle, for their meat, grow amaranth and mix with corn for an equivalent of meat. Simple, and a far more efficient use of corn. *Finegan Fine* has a chapter on [an orphanage](#), where this idea is promoted. If this exhausted old woman can manage to feed growing kids a high protein diet, so can you.

*The orphan mistress has graying hair, barely pinned on top of her head in a bun. Her dress is tattered and hanging on her body as though at one time she were somewhat overweight. She looks immensely weary, and walks as though she might not make the next step. She stops to take her breath and looks up at the visitors. Seeing them non-threatening, she raises a hand weakly, as though saying a "hello", and then walks forward toward the dining area. She takes a seat on the picnic table, sighing as though relieved to be off her feet. Taking a deep breath to gain her strength, she lifts her face to smile at the visitors and waves them forward to join her. She directs her charges. "Stir that fire and put on a pot. We'll serve some tea." She leans back, having caught her breath, and continues to direct her young charges. "Honey, use that other pot. It has a spout. That's it."*

*Finegan says, "These aren't all yours." The startled orphan mistress responds, "Oh Heaven's no. I'd surely be in the ground if that was the case! Picked them up in Montgomery when the troubles hit. I was down there visiting, checking on some friends of mine that can't move around so good no more. After I buried them, heart attack and such, I was heading back home and found these kids just lost. Been weeks, and no one came to collect them. Well, what could I do? We came home together. Been a blessing, these darlin's have been. A blessing." Finegan's mouth drops open at this unexpected description of a dozen or more orphans, some obviously only toddlers when she collected them, being described by this exhausted woman as a "blessing". He catches himself as he realizes they are watching his reactions.*

*"I been at this business for some years. Planted corn and amaranth, being vegetarian and all. Don't need meat if you got those. Made a mix for the local organic outlets. Amaranth greens are a good salad too. Made my living at that. No need to plow if you keep the weeds down regular. Just re-seed." The orphan mistress waves in the direction of the wall of young children clustered behind her, each clutching a cup of tea. "These are the best little weed pickers I ever seen. You pull a weed up, the grubs and beetles fall out, and the chickens clean them up. You go down the rows and knock the bugs off the plants, and the chickens foller along and clean them up. What's left is our produce, bug free, and eggs. We got lots of eggs."*
