

# The ZetaTalk Newsletter

## Issue 338, Sunday March 24, 2013

*Weekly news and views from around the world and beyond.*

**New ZetaTalk      Earth Changes      Announcements      Signs of the Times**  
**Transparent Excuses**

Per the Zetas, the excuses provided by the establishment are increasingly ludicrous, and the public is no longer buying them. Planet X, aka Nibiru is being filmed by the public, with or without filters to such an extent that those who have not yet seen it or its Moon Swirls feel deprived.

Evidence of the charged tail of Planet X, such as red dust, have forced the establishment to generate ridiculous excuses such as long ranging dust cloud from the Sahara (reaching all the way to Siberia and the US). Does anyone buy this, especially when red dust landing in 2007 proves to have a high iron content?

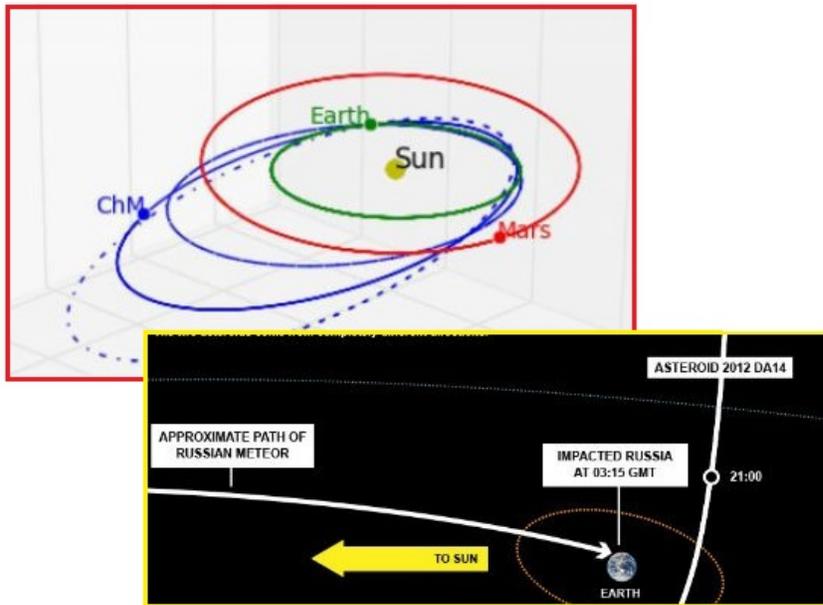

*And there appeared another wonder in heaven; and behold a great red dragon, having seven heads and ten horns, and seven crowns upon his heads. And the third angel poured out his vial upon the rivers and fountains of waters, and they became blood.*

**Bible, Book of Revelations**

*2007: Orange Snow in Siberia, with high iron content. [and from another] Red dust at a Summer residence in Russia in bathing with water which stood for the past year! Water became red color, and on the edges there was a wet red dust! Also there was red dust and in a city fountain directly at the bottom. Predictably the dust contains iron as when in water it aligns on a magnet! [and from another] I recently noticed red dust as a leftover from years on a never used plastic chair on my balcony in Germany. That chair was standing outdoors but under a roof. I put some of the red dust on a piece of*

*paper and checked it out with a strong magnet. The dust turned out to be magnetic. It is iron oxide.*

Bolides coming directly from the direction of the Planet X complex have awakened the public. Excuses are beginning to collide, or lack coordination. NASA's rush to explain that the Russian bolide came from the direction of the Sun, when the known asteroid passage behind the Earth had a more normal asteroid orbit, collided with Russia's need to invent an excuse for the Russian bolide *other* than the obvious explanation that it was from the vast tail of Planet X. Oops, get your stories straight, guys!

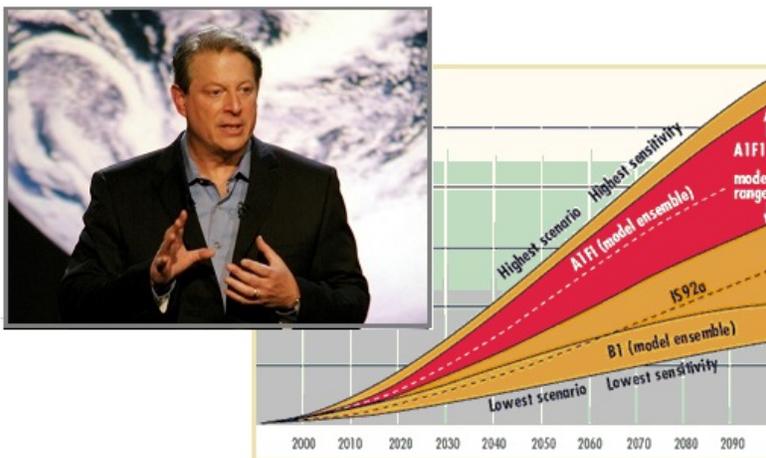

Russian Meteor Came from Asteroid Belt Between Mars and Jupiter  
February 26, 2013

<http://www.dailymail.co.uk/sciencetech/article-2284801/Russias-meteor-came-asteroid-belt>

*Astronomers have calculated the origin of a meteor that injured 1,000 people after breaking up over central Russia. They used amateur video footage to plot the path of the space rock that burned up over the city of Chelyabinsk causing shockwaves that blew out windows. The results suggest the meteor belongs to a well known family of space rocks known as the Apollo asteroids, and probably came from an asteroid belt between Mars and Jupiter.*

**ZetaTalk Insight 3/9/2013:** *NASA is desperately trying to be inventive in their attempts to explain the Earth changes caused by the near presence of Planet X. They anticipated amateurs spotting an object in the sky, and the vast debris ridden dust cloud. Their solution to this was ridicule. If the astronomers (under a National Security Directive) were saying it was not there, then who is the public going to believe? NASA or their lying eyes? They anticipated the increase in fireballs by claiming that asteroids, dark rocks hard to detect and track, had come of late from the Asteroid Belt. They anticipated red dust in the atmosphere, turning the skies red and landing here and there, an accumulation that was undeniable. This was claimed to be pollution in the air, settling out, even where industries did not exist.*

Global Warming was grasped as the excuse to be used to explain a mysterious increase in melting permafrost and restless underwater volcanoes - the El Nino effect without end. These Earth changes come from the core of the Earth, bottom up heat, not the air temperature claimed by Global Warming, but CO2 was chosen to take the blame. Up until the early 1980's the Earth was cooling, per global annual temperature, but then suddenly began to rise. This coincided with the 1983 discovery of Planet X, inbound, by the IRAS team. Thus the Global Warming excuse was invented to cover any warming trends, even those coming from the core of the Earth. This continues today, despite [evidence of fraud](#) in the data used by the UN. Global Warming projections were set to cover such matters as rising seas, which only seem to be affecting those on plates that are sinking. This discrepancy is covered by the rain excuse. Sinking land is seemingly afflicted by continuous rainfall, thus flood. But bit by bit the truth is admitted as the Global Warming excuse is no longer credible.

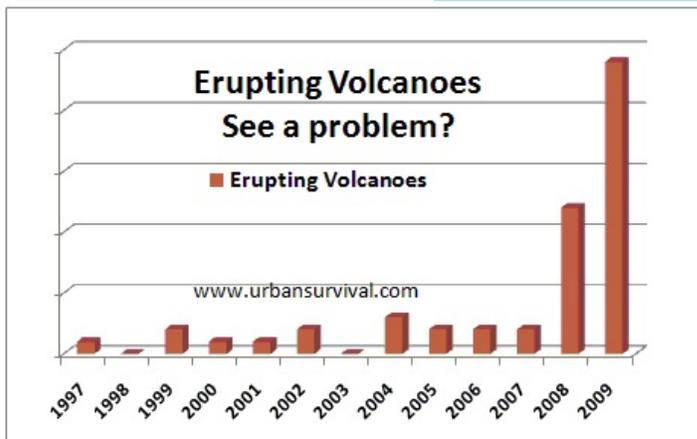

### History of the Greenhouse Effect and Global Warming

<http://www.lenntech.com/greenhouse-effect/global-warming-history.htm#ixzz2MHkT986q>

*In the late 1950's and early 1960's Charles Keeling used the most modern technologies available to produce concentration curves for atmospheric CO2 in Antarctica and Mauna Loa. These curves have become one of the major icons of global warming. The curves showed a downward trend of global annual temperature from the 1940's to the 1970's. At the same time ocean sediment research showed that there had been no less than 32 cold-warm cycles in the last 2.5 million years, rather than only 4. Therefore, fear began to develop that a new ice age might be near. The media and many scientists ignored scientific data of the 1950's and 1960's in favor of global cooling. In the 1980's, finally, the global annual mean temperature curve started to rise. People began to question the theory of an upcoming new ice age. In the late 1980's the curve began to increase so steeply that the global warming theory began to win terrain fast.*

The [earthquake increase](#) is palpable, the magnitude regularly under-reported, as is the [increase in volcanism](#). This cannot be covered by Global Warming or solar cycle excuses, so is under-reported and kept from the public's eye. Are you hearing about the increase on the nightly news?

**ZetaTalk Insight 3/9/2013:** *Very early in the game they anticipated the Earth heating up, based on measurements taken since the early 1980's showing this process as a reaction to the newly discovered Planet X identified by the IRAS team in 1983. Prior to this time, the globe had been cooling, so a clear change had occurred in the 1980s. Global Warming was the answer, aggressively pushed by such notaries as Al Gore. As earthquakes rose in frequency and severity, the answer was to direct the USGS, which is dominant in the world, to drop and downgrade quakes. Any shuddering or shaking unexplained by earthquakes statistics are attributed to fracking or mining explosions. The booms from breaking rock and heaving ground during plate movements are attributed to anything from aircraft breaking the sound barrier to fireworks. The volcanic increase was dealt with by restricting the media, so only local coverage occurs.*

NASA chose to blame the Sun, predicting a [horrific solar cycle](#) that would cripple the grid on Earth and could be blamed for electromagnetic interference on Earth. In yet another contradiction, during the Mayan Calendar hangout on [November 28, 2012](#) their solar scientists contradicted the earlier NASA claims. The entire solar cycle, from the lack of sunspots throughout the solar minimum to the unimpressive CME's during the solar max, had been a disappointment. Now what? Reinvent history. Where Solar Cycle 24 was originally to peak in 2010-2011, it was pushed to 2012 and now into 2013 and beyond because the Sun was uncooperative.

2012 May Bring the "Perfect Storm" - Solar Flares, Systems Collapse

April 2, 2009

<http://www.examiner.com/x-2912-Seattle-Exopolitics-Examiner>

*Long scorned as "mysticism" and "parascience," concern about the year 2012 has now surfaced in a mainstream NASA report on the potential impacts on human society of solar flares anticipated to peak in 2012.*

The Calm Before the Solar Storm? NASA Warns Something Unexpected is Happening to the Sun

March 8, 2013

<http://www.dailymail.co.uk/sciencetech/article-2290289/NASA-warns-unexpected>

*Sunspot numbers are well below their values from 2011, and strong solar flares have been infrequent, as this image shows - despite NASA forecasting major solar storms. Experts have been baffled by the apparent lack of activity - with many wondering if NASA simply got it wrong. Solar physicist Dean Pesnell of NASA's Goddard Space Flight Center believes he has a different explanation. The last two solar maxima, around 1989 and 2001, had not one but two peaks.*

Scientists Predict Big Solar Cycle

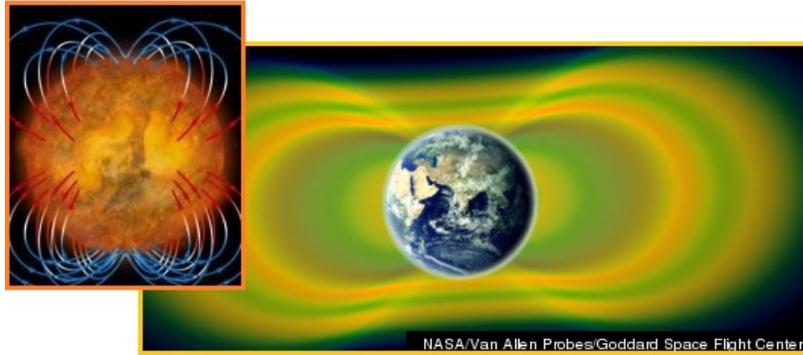

December 21, 2006

[http://science.nasa.gov/headlines/y2006/21dec\\_cycle24.htm](http://science.nasa.gov/headlines/y2006/21dec_cycle24.htm)

*Solar cycle 24, due to peak in 2010 or 2011 "looks like its going to be one of the most intense cycles since record-keeping began almost 400 years ago," says solar physicist David Hathaway of the Marshall Space Flight Center. He and colleague Robert Wilson presented this conclusion last week at the American Geophysical Union meeting in San Francisco.*

**ZetaTalk [Comment](#) 3/16/2013:** *Left with egg on their faces for all their wrong predictions, NASA scientists are now trying to re-write history. The solar maximum for cycle 24 was originally projected for 2010-2011. Then it was extended to 2012 to align with the 2012 Mayan Calendar predictions, in part, but also because the solar minimum was showing the Sun to be shockingly quiescent. Sunspots were virtually absent. Now as 2012 is past and the Sun has still not approached the expected maximum, they are pushing the dates once again. They are caught in a web of their own lies.*

Getting inventive, NASA came up with a [quad-pole theory](#), a Sun that had four poles, and now, a temporary radiation belt around the Earth. This presumably, to explain the twisting magnetosphere of Earth that has been increasingly the norm since Planet X arrived in the inner solar system in 2003. Since NASA controls the data they use as the basis for these new theories, no one can state otherwise. The Earth wobble, [increasingly more obvious](#), has yet to be addressed by the inventive NASA.

### New, Temporary Radiation Belt Spotted Around Earth February 28, 2013

<http://www.nytimes.com/aponline/2013/02/28/science/ap-us-sci-radiation-satellites.html>

*You may not have noticed it, but for several weeks last year, the Earth was surrounded by an extra ring of radiation. There are two doughnut-shaped rings of highly charged particles encircling the planet. Discovered in 1958, they're known as the Van Allen radiation belts. So it came as a surprise when NASA's recently launched twin satellites to the treacherous region discovered a third, temporary ring. It appeared for a month before a shock wave from the sun destroyed it. Scientists are still trying to figure out how often this happens.*

### New Radiation Belt Around Earth Discovered By NASA's Van Allen Space Probes February 28, 2013

<http://www.huffingtonpost.com/2013/03/01/new-radiation-belt-earth-nasa-van-allen>

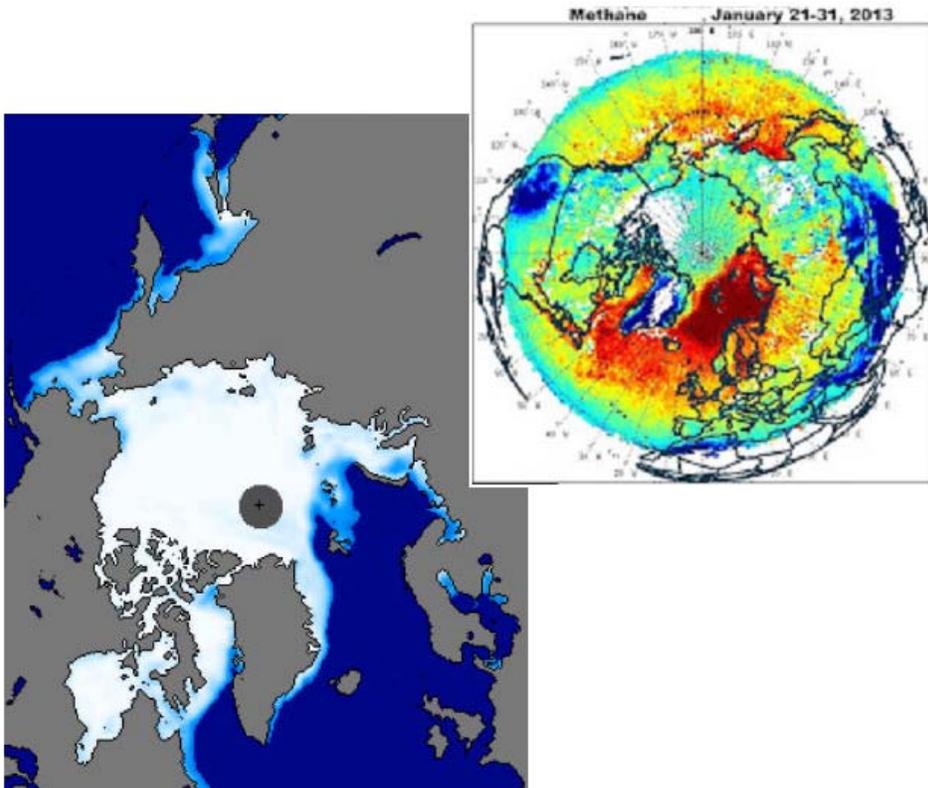

*NASA's twin Van Allen space probes, which are studying the Earth's radiation belts, made the cosmic find. The surprising discovery — a new, albeit temporary, radiation belt around Earth — reveals how much remains unknown about outer space, even those regions closest to the planet.*

**ZetaTalk Insight 3/9/2013:** *The most difficult symptom to address was the magnetic flux, which has pushed the magnetic North Pole of Earth toward Siberia and befuddles pilots and those using the compass steadily since the arrival of Planet X in the inner solar system. This was addressed at first by NASA claiming the Sun was going frantic, having an extreme solar maximum, but reality did not support this. The Sun was virtually asleep during this cycle. Then they threw out a quad-pole theory, that the Sun had developed more than one set of poles, but they could never coordinate what was happening on Earth to their various Sun theories.*

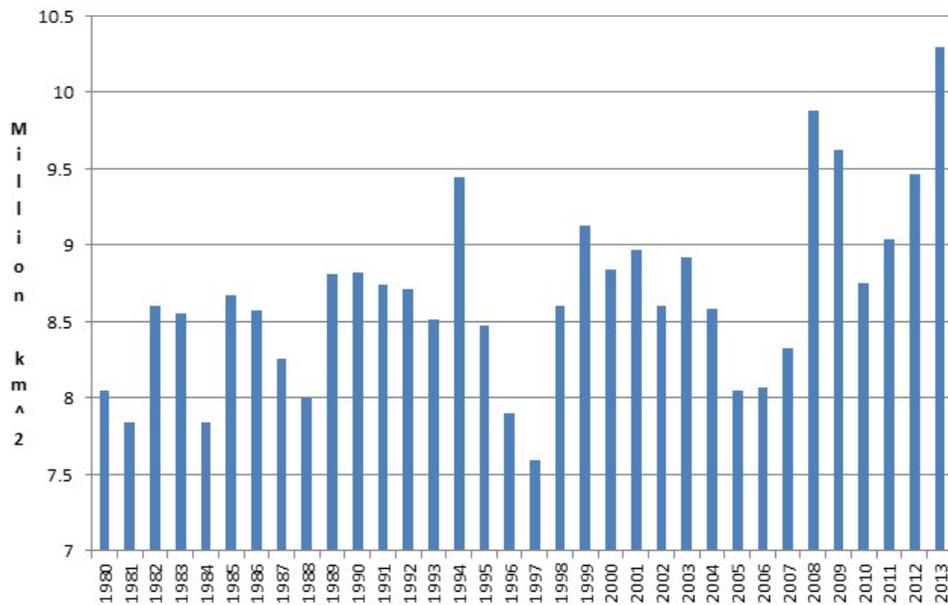

*Stuck with an increasingly twisting magnetosphere, NASA has been forced to invent an imaginary second radiation belt. The public, who have been barraged by all these theories, is getting increasingly skeptical. They notice the Earth wobble, which causes the Sun to be rising and setting in the wrong place, and note how this and the errant Moon, which likewise is appearing where it ought not, are ignored by the media. Meanwhile the Planet X complex has become so visible it is seen naked eye, a Second Sun and the Sun surrounded by brilliant Moon Swirls. Expect an inventive excuse for this from NASA shortly. Perhaps this will be a result of the newly discovered and intermittent radiation belt!*

## Wobble Patterns

The Figure 8 of the Earth wobble expresses itself in many ways. One is the lopsided ice at the poles, as was noted in [Issue 328](#) on January 13, 2013 where Arctic ice is growing while Antarctic ice is shrinking. But in addition, why should the Arctic side near Greenland and Iceland be frantically melting, while the side above the Pacific is increasing its ice cover? This is the wobble effect, where the N American face pulls the globe down for extra sunlight while the New Zealand face pushes it up so the Arctic gets less sunlight at that time. There is *no* other explanation for this ice pattern.

**Mid-September To End Of January Arctic Sea Ice Area Growth**

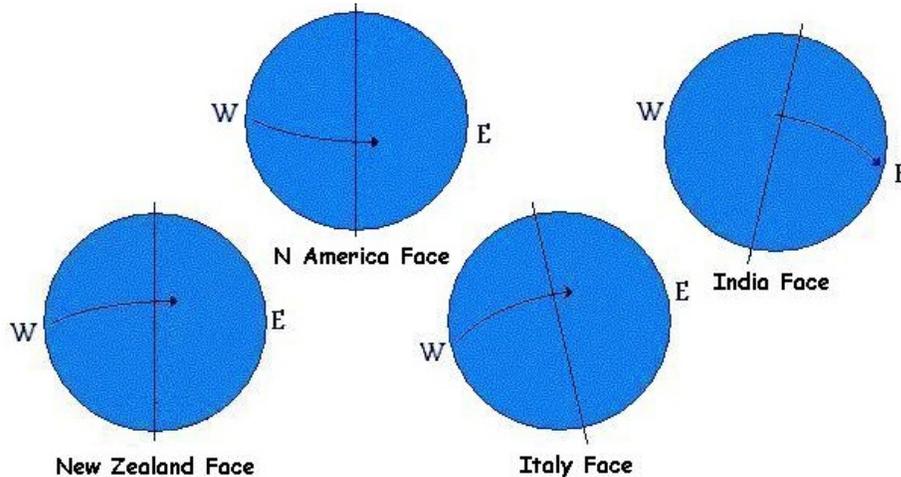

Record Arctic Ice Growth In 2012-2013

January 30, 2013

<http://stevengoddard.wordpress.com/2013/01/30/record-arctic-ice-growth-in-2012->  
*Arctic ice area growth since mid-September has shattered the previous record, growing 175,000 Manhattans of new ice over the last four months.*

Another expression of the Figure 8 of the Earth wobble is a sunrise or sunset out of position in the sky. This can be determined by measuring the azimuth, the position along the horizon, but can also be determined by whether the sunrise or sunset comes early or late, as was noted by an [observer in central Wisconsin](#) lately. Note that in this report the wobble is getting stronger day by day, as the gap between the expected time of sunrise and the actual sunrise is widening. At dawn in Wisconsin, the globe is in its Italy face, tilted up so Wisconsin is up over the horizon more than expected, too far to the North. Thus, the delay in timing.

*On Jan 20, sunrise at 7:28 am by forecast, but real sunrise at 7:34 am.*

*On Jan 21, sunrise at 7:27 am by forecast, but real sunrise at 7:37 am.*

*On Feb 1, for about 10 min after sunrise, the Sun moved sliding on the horizon.*

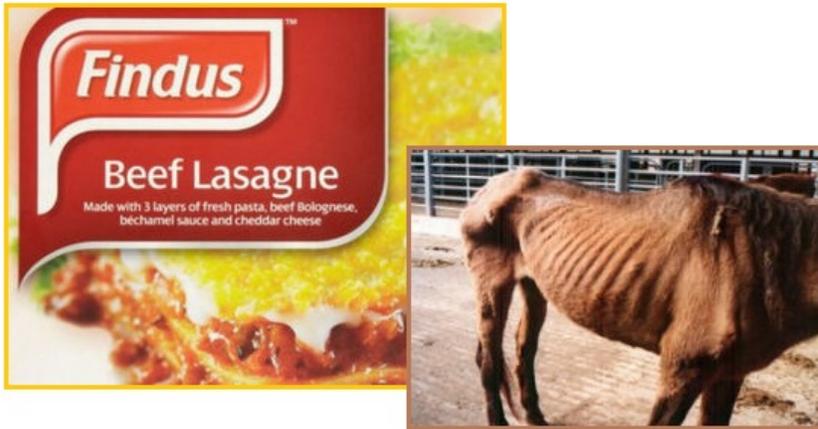

*On Feb 2, sunrise at 7:15 am by forecast, but real sunrise at 7:28 am.*

*On Feb 6, sunrise at 7:10 am by forecast, but real sunrise at 7:25 am.*

*On Feb 8, sunrise at 7:07 am by forecast, but real sunrise at 7:20 am.*

## Where the Beef?

Recently horsemeat in the mix scandalized Europe, with the discovery that it was showing up in a Norwegian lasagna and Burger King burgers in the UK. Due to the incessant drought and deluge cycles the last few years, a result of Planet X, aka Nibiru, in the vicinity causing the Earth wobble, fodder for herds has become more expensive. Farmers are cutting their herds, and those trying to feed horses find their hobby too expensive. In Texas, horses are let out on the highway by their former owners, despairing of being able to feed them.

### How the Horse Meat Sneaked Into the Lasagna

February 11, 2013

<http://www.rawstory.com/rs/2013/03/02/insects-could-be-humans-next-food-source>

*Merchants in Britain, France, Ireland, and Sweden are pulling frozen meals and hamburger patties off their shelves after tests showed the presence of horse DNA in what was supposed to be beef. Horse meat found in frozen lasagna in Britain apparently came from Romania. Burger King's British unit recently found traces of horse DNA in burgers supplied by an Irish company that had imported the meat from Poland.*

### Abandoned and Starving to Death: Hundreds of Skeletal Horses

December 5, 2011

<http://www.dailymail.co.uk/news/article-2070209/Skeletal-horses-abandoned-Texas>

*After a year without rain in Texas, coupled with rocketing temperatures, crops have been sparse and the price of a bale of hay has doubled. The drought has also forced Texas ranchers to sell cattle, leaving them with horses that are no longer needed to round up herds.*

Starvation is on the increase, due to worldwide crop shortages caused by weather irregularities. The Earth wobble has created drought and deluge cycles, devastating to crops. The worldwide drought was detailed in [Issue 151](#) of this newsletter on September 9, 2009. To show that both drought and deluge are occurring, per the Zeta prediction, note how Texas is affected in a two year swing. In [Issue 165](#) of this newsletter (dated December 27, 2009) Texas is drowning, up to 300% of normal rainfall for the eastern half of the state. But as detailed in [Issue 304](#) on July 29, 2012 they are in the grip of an intractable drought. This drought and deluge pattern was predicted by ZetaTalk in 1995, at the start of the ZetaTalk saga, at a time when no others were making such predictions.

**ZetaTalk Prediction 7/15/1995:** *As we described earlier, going into the cataclysms the weather will become unpredictable, with torrential rainstorms where not expected, and droughts likewise where not expected. Extremes of temperature will be experienced. Unusually warm winters, where the trees and shrubs will start to bud, thinking spring, and then be subjected to frost. Similarly, frosts will come late in the spring, almost into summer, killing the buds which have already put forth their tender shoots. During the years coming close to the time of the reappearance of Planet X, the giant comet, all parts of the world will*

*experience extremes. Of course, leading up to the cataclysms, not all produce will fail. Greenhouse crops will come through. Backyard gardens, tendered carefully by watchful eyes, will survive. But the large cash crops that supply crowded population centers will find little to market, and the prices will go up accordingly.*

Horses may not be cattle but at least they are a hooved animal. But there is another item increasingly found in the cooking pot, and being recommended by the media – insects!

### Caterpillar Stew Found Cooking In Shop In Aubervilliers

February 28, 2013

[http://www.huffingtonpost.com/2013/02/28/caterpillar-stew-france\\_n\\_2782326.html](http://www.huffingtonpost.com/2013/02/28/caterpillar-stew-france_n_2782326.html)

*Inspectors uncovered a pot of curious meat boiling on a stove of the Aubervilliers store. Upon further investigation, the officers discovered the contents of the pot were actually a caterpillar stew. Dishes containing caterpillar meat are quite common in some African countries.*

### Insects Could be Humans next Food Source

March 2, 2013

<http://www.rawstory.com/rs/2013/03/02/insects-could-be-humans-next-food-source>

*Edible insects emit fewer gases, contain high-quality protein, vitamins and amino acids, and have a high food conversion rate, needing a quarter of the food intake of sheep, and half of pigs and chickens, to produce the same amount of protein. They emit less greenhouse gases and ammonia than cows and can be grown on organic waste. China is already successfully setting up huge maggot farms. Zimbabwe has a thriving mapone caterpillar industry.*

This has long been recommended by the Zetas, also from the start of the ZetaTalk saga in 1995. Starvation alternatives include odd plants like duck weed, are detailed in [Issue 292](#) and eating kudzu detailed in [Issue 303](#) of this newsletter. Eating bugs and earthworms is also noted in my [2008 YouTube video](#) with tips on high-protein [meatless meals](#) in its companion video. Mixing amaranth and corn will bring the equivalent of red meat to the table! Who knew!

**ZetaTalk [Advice 7/15/1995](#):** *After the cataclysms bugs will be in abundance, as dead tissue from both plants and animals is everywhere. This trend can be taken advantage of, as distasteful as that concept might be to humans who have never eaten a bug. Larva, grown in humus, can be turned into pureed and creamed soups, puddings, or omelets by skilled cooks. Those eating the fare would never guess that the base was not cream, milk, and eggs.*

*For those humans who do not prepare, they will find themselves eating bugs in any case, as meals from what they can catch or find growing will be few and far between.*

---
