Signs of the Times

### Neil deGrasse Tyson

Neil deGrasse Tyson is a charming and animated astrophysicist, and not being a stuffed shirt is frequently invited onto talk shows.

Neil deGrasse Tyson

[http://en.wikipedia.org/wiki/Neil\\_deGrasse\\_Tyson](http://en.wikipedia.org/wiki/Neil_deGrasse_Tyson)

*Currently the Frederick P. Rose Director of the Hayden Planetarium at the Rose Center for Earth and Space and a research associate in the department of astrophysics at the American Museum of Natural History. From 2006 to 2011 he hosted the educational science television show NOVA ScienceNow on PBS and has been a frequent guest on The Daily Show, The Colbert Report, Real Time with Bill Maher, and Jeopardy!. It was announced on August 5, 2011, that Tyson will be hosting a new sequel to Carl Sagan's Cosmos: A Personal Voyage television series.*

But he's brimming over with arrogance when he declared aliens "stupid" for having their saucer shaped ships spin. After all, mankind's "law" of Angular Momentum says this would have to be countered by another force.

VIDEO: <http://www.youtube.com/watch?v=wctnuGKKTp4>

Why do only 'Stupid' Aliens Build Flying Saucers that Spin? Neil deGrasse Tyson Explains

May 2, 2013

<http://www.rawstory.com/rs/2013/05/02/why-do-only-stupid-aliens-build-flying-saucers-that-spin>

*Though classic sci-fi movies often depict extraterrestrial beings visiting Earth in spinning disks, astrophysicist Neil deGrasse Tyson explained that only stupid aliens who didn't understand the laws of physics would build such an interstellar craft. "If you set it into rotation, something else has to be set rotating the opposite direction. It's a little thing, you learn it in the second week of physics 101. It's the conservation of angular momentum." The physical law holds that if one part of a system is given angular momentum, then some other part of that system must simultaneously be given the same angular momentum in the opposite direction.*

The host of the talk show pointed out that Neil hasn't constructed a space ship, but this didn't dent the arrogance of Neil. I posted comments on the YouTube to that effect.

*Well, Neil, when YOU can build and fly one of these ships, I'll consider listening to YOU about these matters. Until then, why listen to stupid? If someone wants to know why space ships spin, or don't spin, why not ask those who KNOW - ZetaTalk!*

*Here's a clue from existing ZetaTalk. <http://www.zetatalk.com/visitatn/v39.htm>*

*"The primary gravity center may be anywhere in relationship to the ship - above, below, or even to the side. [Space flight incorporates] production of an internal gravity center. The saucer shape, or its variant, the bell shape, support the technology for production of a gravity center. It is no accident that the planets in your solar system line up in essentially the same plane. The saucer shape simulates this."*

*Angular Momentum? <http://www.zetatalk.com/index/zeta101.htm>*

*"It is known by man that the outer planets will speed up and slow down when approaching or leaving each other, termed perturbations caused by the tug of gravity. Then why would the planets return to their prescribed place, afterwards? The rigidity of Newton's Laws are set aside at such times, while human theorists sputter about with Conservation of Energy abstractions, supposedly some elf in the cosmos registering the slowing and inserting a commensurate acceleration later."*

Indeed, Newton's Laws are not laws at all but anxious mankind's attempts to provide itself with guideposts. If the Sun came up at 6:05 am this morning, then it is likely to rise close to that time tomorrow, so sleep soundly through the night. Angular Momentum, as the Zetas have explained, does *not* rule during planetary perturbations. It is all that man does not see or understand, all those particle flows that affect the orbits of planets and return them to their usual orbits. But mankind clings to his comforting "laws" and does not admit ignorance.

**ZetaTalk [Observation 5/19/2004](#):** *It is known by man that the outer planets will speed up and slow down when approaching or leaving each other,*

termed perturbations caused by the tug of gravity. Then why would the planets return to their prescribed place, afterwards? The rigidity of Newton's Laws are set aside at such times, while human theorists sputter about with Conservation of Energy abstractions, supposedly some elf in the cosmos registering the slowing and inserting a commensurate acceleration later, with some kind of cosmic balance scales, ignoring the fact that the last adjustment would carry by the weight of momentum to be a permanent effect, all other factors being equal. Newton states that the status quo continues, contradicting man's explanation, but man cannot put his theories together on the same page, though continues to state they are all infallible.

Searching for existing ZetaTalk that referenced any spinning of a space ship, I found ZetaTalk lacking, and prepared to write some new ZetaTalk to cover the issue.

ZetaTalk has the answers, more tomorrow. <http://www.zetatalc.com/science/s108.htm>

"Why do the planets in the solar system all line up into the ecliptic plane? This phenomena occurs in the rings around Saturn also. But it is not the sling that keeps them at the waist, as a sling alone would not keep them nicely in place, a ring around the waist. There is a return of some type, with the return coming back into the rotating sun or planet at the poles, and then flowing in the direction of the waist, to fill the gap caused by the sling."

As promised. From the Zetas who are anything BUT stupid, as Neil implied. Why ask a man who has no clue when the Zetas zip around in them? Why ships spin: <http://www.zetatalc.com/ning/11ma2013.htm>

"Space ships spin when entering the Earth's gravity field from another dimension, temporarily. Though they create their own gravity field they are perturbed by the outside field and the spin stabilizes the ship, disbursing the exiting gravitons. This is the reason you swing your arms during your gait. Only the periphery of the ship spins."

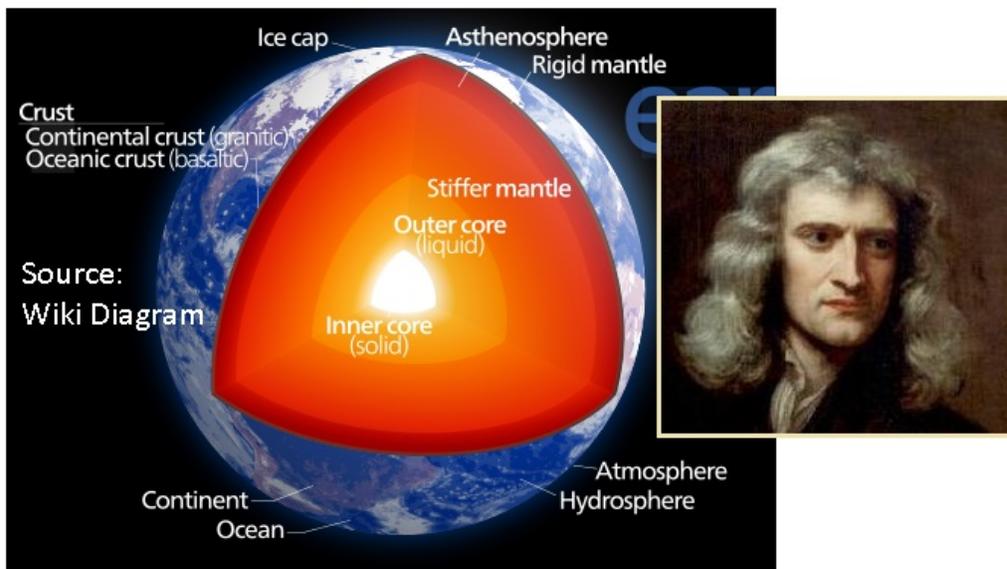

Naturally, rather than contemplate this information from those who can build and fly space ships, the friends of Neil came aboard to insult ZetaTalk. Typical of those who cling to their false sense of superiority.

**ZetaTalk Observation 1/15/1997:** Students who think for themselves are on the right track, when they grope into areas that are not discussed or presented in school as they sense that they are only being given part of the picture, when they reject rigid explanations they have been given of how things work, or explanations that were based on only part of the puzzle and not the whole. This can never be wrong, but they are treated otherwise. The student is expected to accept the rigid explanation and toss away any new pieces of the puzzle they discover because it upsets the rigid explanation. Thus the anger of professors when they are asked questions that seem to counter or contradict the going theory. In truth, more bright students, the thinking type, leave school than stay in, and those that stay in are in pain.

## Gravity at the Core

Gravity is assumed to become stronger, a stronger draw, toward the center of a mass. Thus the Earth's core is assumed to be under tremendous pressure, being at the center of the gravity mass which is Earth. It is also assumed to be composed primarily of crystalized iron, due to the press of gravity upon the core and seismological studies. The Zetas, however, have always stated the core is *not* solid, but molten, liquid.

## Gravitation

<http://en.wikipedia.org/wiki/Gravitation>

In 1687, English mathematician Sir Isaac Newton published Principia, which hypothesizes the inverse-square law of universal gravitation. Every planetary body (including the Earth) is surrounded by its own gravitational field, which exerts an attractive force on all objects. Assuming a spherically symmetrical planet, the strength of this field at any given point is proportional to the planetary body's mass and inversely proportional to the square of the distance from the center of the body.

### Inner Core

[http://en.wikipedia.org/wiki/Inner\\_core](http://en.wikipedia.org/wiki/Inner_core)

*The inner core of the Earth, its innermost part, is a primarily solid ball with a radius of about 1,220 km (760 mi), according to seismological studies.*

**ZetaTalk Explanation 7/15/1995:** *You are aware that your Earth is heavier at its molten core, which is rumored to be composed primarily of iron. This is not entirely untrue.*

**ZetaTalk Explanation 12/15 1995:** *The core of the Earth is liquid, and mobile, and has a mind of its own.*

Armed with the assumption that the core is solid, and that the pressure of gravity increases the closer to the center of the core one gets, scientists conducted an experiment to determine the temperature at the core. The shock: the core of the Earth should be hotter than the Sun! Oops!

### Earth's Core 1,000 Degrees Hotter than Thought, on Par with the Sun

April 26, 2013

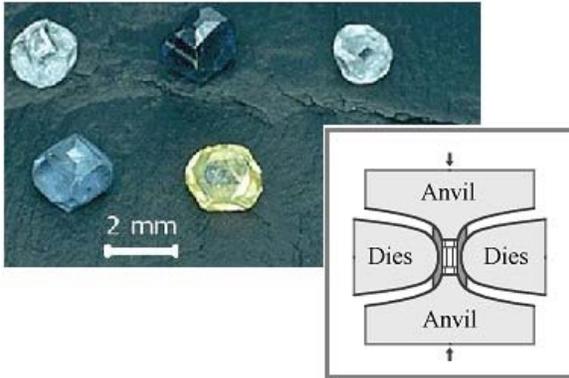

<http://www.ctvnews.ca/sci-tech/earth-s-core-1-000-degrees-hotter-than-thought>

*The Earth is believed to have a solid core, consisting mainly of iron in a crystalline state. Surrounding that solid core is an outer core comprised of scorching-hot liquid. The temperature of the crystalline centre has been the subject of an enduring debate, with scientists unable to agree on how the iron might behave in the intense pressure and heat of that environment. According to the experiment, the Earth's core is 1,000 degrees hotter than previously thought - making it 6,000 C, on par with the temperature on the sun.*

Per the Zetas, it is mankind's inability to understand the gravity [Repulsion Force](#), the outward burst of gravity particles from a gravity sink, that is missing from their equations. In that the core of the Earth is spurting outward as well as being the center of Earth as a gravity sink, the pressure is not what man assumes.

**ZetaTalk Explanation 5/4/2013:** *Current human science asserts the core of the Earth is crystalized iron, solid state. We, the Zetas, have stated since the start of the ZetaTalk saga that the core is liquid. Acutely aware that our predictions on a coming crustal shift are likely to come true, scientists have recently been trying to learn more about the core and the magma just below the plates. They have learned in March that the magma just under the plates can be remarkably slippery. They announced the findings of their examination of the Chatham Rise pockmarks on the plate edge at New Zealand in April. And now in May we hear about a study on the composition of the Earth's core.*

*What these scientists entered into their computers are their assumption on the composition of the core. They have assumed a crystalline structure, as crystals such as diamonds form under heavy pressure and heat. This is how crystalline structures are in the main manufactured! They assume a consistent gravity press upon the core, when the oppression of the gravity press is alleviated at the core! In our description of the Repulsion Force we describe gravity particles shooting out of a gravity sink, at great speed and intensity. At the core, there is more of this going on than the slow drift of gravity particles toward the core, thus gravity is relieved at the core, and the pressure parameter in the scientist's equations thus in error. The center of the core might even be considered an anti-gravity environment!*

### High Pressure, High Temperature

[http://en.wikipedia.org/wiki/Synthetic\\_diamond](http://en.wikipedia.org/wiki/Synthetic_diamond)

*In the HPHT method, there are three main press designs used to supply the pressure and temperature necessary to produce synthetic diamond.*

### Citizen Hearing on Disclosure

Yet another attempt to pressure the US government into disclosure took place in Washington DC during the week of April 29 to May 3, 2013 at the [Citizen Hearing](#). Once again undeniable evidence and testimony from impeccable witnesses was presented. Other than bringing the matter before the public once again, the game plan was not clear.

### Truth Is Out There? Really? Ex-Lawmakers Piqued, but Skeptical on ETs

May 2, 2013

<http://abcnews.go.com/Politics/truth-lawmakers-piqued-skeptical-ets/story>

*According to organizer Stephen Bassett, who founded Paradigm in 1996 as a political-advocacy and lobbying group to pressure the government to release information on UFOs, the whole event will wind up costing \$600,000. Funding was supplied by a wealthy Canadian donor named Thomas Clearwater. Bassett told ABC News. "Congress is out of the game. Let me tell you, the president is out of the game. It is run within the military-intelligence community."*

### Believe in UFOs? Highlights of the Citizen Hearing on Disclosure

May 3, 2013

<http://www.washingtonpost.com/blogs/compost/wp/2013/05/03/believe-in-ufos>

*How exactly we deal with the Alien Presence is less clear. A real congressional hearing? UN commission? Special emissary on behalf of the Children of Earth? All of the above? None of the above? There seemed to be a general consensus that we will have to yield some sovereignty to the United Nations. Then again, maybe it's a theological question.*

### If TRUTH is Controversial

May 1, 2013

<http://ireport.cnn.com/docs/DOC-966488>

*Who is the ultimate authority on what is best for me, you or anyone? Are we too delicate, too naive, too uneducated to understand the implications that may derive from "full" disclosure? These are just some of the questions being addressed at The Citizen Hearing on Disclosure.*

Per the Zetas, it is not Congress who will initiate disclosure on the alien presence, as control lies in the Executive Branch.

**ZetaTalk Comment 11/6/2010:** *You are presuming that the cover-up over the alien presence is run by Congress! It is absolutely run from the Executive Branch, and always has been. From the start, when MJ12 was formed, the secrecy was by an Executive Order. National security was the reason for the cover-up, executive agencies such as the CIA and NSA holding work sessions on whether or not the American public would react in panic. The Department of Defense is likewise under the control of the Executive Branch, covered by the early Executive Orders written to protect MJ12 from public view. All involvement of the DOD's intelligence services, so heavily involved in MJ12, likewise covered. The Air Force conducted project Blue Book, which fed the public disinformation in response to UFO sightings. It is the number of people, egos, who fear the public's anger at the decades of lies who are responsible for the continuing cover-up over the alien presence.*

There have been hints that disclosure over the alien presence is eminent. The UN considered [assigning an ambassador](#) to the Office for Outer Space Affairs (UNOOSA) in 2010. In January, 2013 [Russia's Medvedev](#) joked about the aliens known to the Russian government. A recent [PPP survey](#) revealed that 29% of respondents think aliens exist and 21% feel a cover-up over Roswell has occurred. Per the Zetas, part of the reluctance is the validity of ZetaTalk. If the truth about Planet X, aka Nibiru, is admitted, the ZetaTalk accuracy track record will beg the question – are aliens real also?

**ZetaTalk Insight 11/12/2011:** *It is often said that the larger the lie, the more the resistance to admitting it. This lie is huge. The US is at the helm of the cover-up over the alien presence. We have stated that we do not expect disclosure to occur within the US because disclosure is tied indirectly to the cover-up over Planet X. If such a large lie were admitted, then what else are they hiding? And if aliens exist, then the highly accurate ZetaTalk might be true, and this raises questions about recent plate movements and signs in the skies seen increasingly by the populace. The elite in the US, the wealthy and politically powerful, are not ready for an enlightened populace, nor will they ever be. The people, however, know the truth, and do not need confessions to be aware.*

## Louisiana Sinkhole

The Louisiana sinkhole at Bayou Corne is now experiencing tremors, and growing. This sinkhole appeared on [August 2, 2012](#) after methane bubbles were sighted on the surface in the [months prior](#). Clearly, the salt domes holding petro for the US reserves were being breached. Petroleum products were detected in the water supply at Bayou Corne, and by December, 2012 were wafting in the air, setting phone and electric poles [afire in Texas](#). The Zetas warned this matter was only going to get worse, and not be restricted to Bayou Corne.

**ZetaTalk Warning 12/15/2012:** *The collapsing and leaking salt dome cavern near Bayou Corne is doing more than putting an oil slick on the*

surface of the sinkhole. The winds are blowing fuel, and there are explosions in abundance! Is FEMA concerned about a possible conflagration at Bayou Corne, with a sudden need to evacuate residents in the area? It is more than just that sinkhole, as numerous salt dome caverns used to store petrol products are in use in the region.

Tremors have been increasingly recorded since March, 2013 and the sinkhole keeps expanding in size, gaining over 3 acres in size within a month.

La. Sinkhole Quakes Occurring! Over 90 in 'Spasmodic Burst'

March 13, 2013

<http://beforeitsnews.com/gulf-oil-spill/2013/03/la-sinkhole-quakes-occurring>

*Seismologist Dr. Steve Horton has reported that a "spasmodic burst" occurred at 1:34 this morning with 90+ micro earthquakes happening overnight, according to Assumption Parish officials. A pattern has been established that increased seismic activity is soon followed by the hungry hole swallowing more of the parish and the size of the monster increases.*

Sinkhole 'Burps' and 'Swallows' More Land

April 18, 2013

<http://www.kebd.com/story/22013588/sinkhole-burps-and-swallows-more-land>

*Officials said there was a "burp" and slough-in at the massive south Louisiana sinkhole. The collapse was on the east side of the sinkhole, but it is not yet known how much land was lost.*

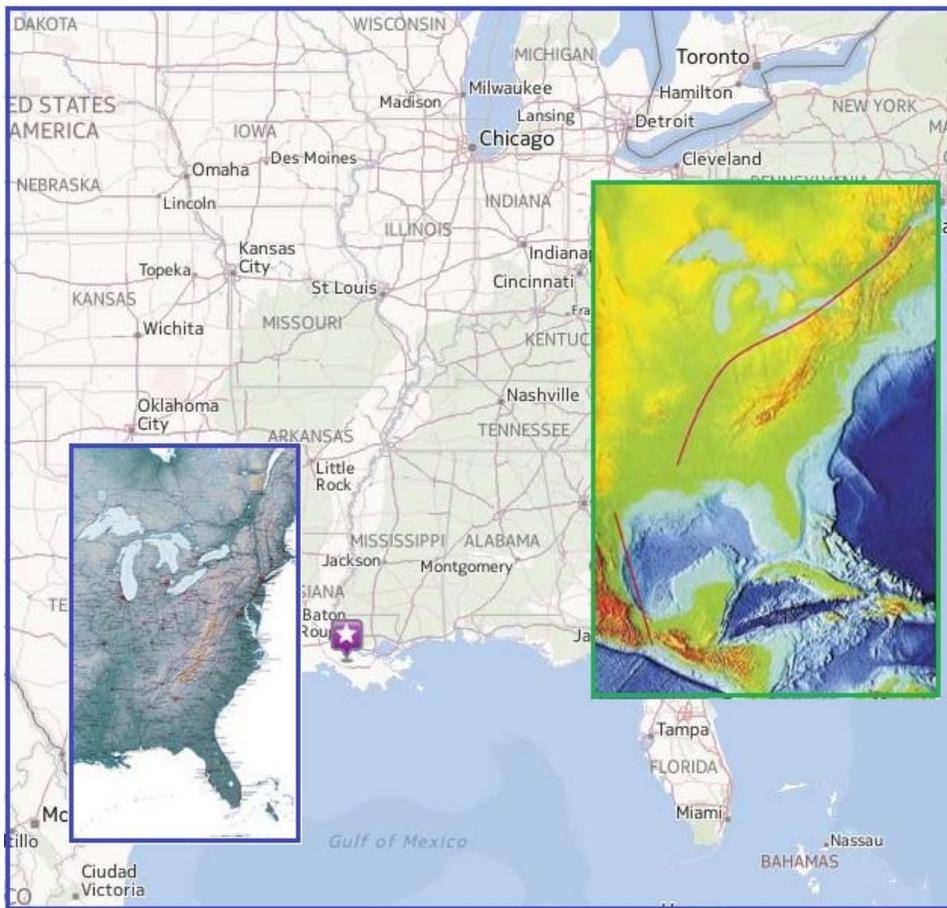

Tremors at Assumption Sinkhole Halt Some Work

May 5, 2013

<http://www.goerie.com/apps/pbcs.dll/article?AID=/20130505/APN/1305050619>

*The last slough-in and "burp" of natural gas, in mid-April, added about three acres to the sinkhole. Conservation and parish emergency officials halted work on the sinkhole's surface. Work elsewhere continued while the micro-earthquakes ranged from 10 to 50 per day. Devices measuring seismic activity have picked up "an increasing trend" in subsurface tremors associated with breaking rock and rock movement.*

Note the location of the Louisiana sinkhole in relationship to the New Madrid fault line. Extend the fault line toward the Gulf and you end up in the Bayou Corne! It's a straight line shot! If the New Madrid is destined to slip slide so that the western side of the Mississippi drops and moves southwest, and the eastern side of the Mississippi shift northeast, then what will happen to the salt dome reserves along the Gulf? They will fracture!

**ZetaTalk Warning 2/10/2006:** The stress on the N American plate will resolve by ripping. Ripping the St. Lawrence Seaway open. Pulling the SE down into the crumbling Caribbean and into the widening Atlantic, as neither of these sinking fronts will be able to support the edge of the heavy N American plate. The primary drama preceding the pole shift will be the ripping action that a plate unable to move must endure. The notable area of catastrophe during this is the eastern half of the continental US. From Houston to Chicago to New England, the diagonal pull will tear the underpinning of cities and create a catastrophe for the US that will make the New Orleans disaster appear trivial.

**ZetaTalk Warning 7/7/2012:** The southeast of the US is being pulled down as the Atlantic Rift pulls apart. It is being pulled down due to the bowing of the N American continent. It is absolutely in the stretch zone and this is being expressed in many ways.
