Weekly news and views from around the world and beyond.

New ZetaTalk Earth Changes Announcements Signs of the Times
Hastings Assassination

Michal Hastings, the aggressive and fearless reporter who exposed General McChrystal's attitudes toward his Commander in Chief, thus getting the general dismissed, was murdered in the early morning hours of June 18, 2013. How do we know it was murder? Just look at the facts. First, Hastings reported only hours before his death that he had to go "off the radar" as he had a big lead and feared the FBI was investigating him. He seemed, in the words of a friend, to be in a panic, alarmed. Second, this car was electronically controlled, to effect parallel parking, for instance. Thus a takeover of the accelerator, steering, and braking could be rigged. Witnesses reported the car flying through a red light at 100 mph. It seemed out of control. Third, the car suddenly jack-knifed to go sideways, which would undoubtedly cause a crash. Fourth, modern cars have the gas tank under the rear seat, to avoid explosions. A car must be hit from the side for the gas tank to explode, and this was a frontal hit. And fifth, all evidence of tampering, including a bomb, would have been incinerated in the fire. Per the Zetas, it was murder, as Hastings was going to reveal the hands responsible for the cover-up.

LAPD Confirms Michael Hastings as Crash Victim, Revealing Email Emerges
 June 22, 2013

<http://tv.yahoo.com/news/lapd-officially-confirms-michael-hastings-car-crash>

Staff Sgt. Joseph Biggs, who had know Hastings since 2008 when the journalist was embedded in Afghanistan, told KTLA that he received an email from Hastings on Monday around 1 p.m. Here's what the email - sent to Hastings' colleagues and which Biggs was blind copied on - said: "The Feds are interviewing my close friends and associates. Perhaps if the authorities arrive BuzzFeed GQ, er HQ, may be wise to

immediately request legal counsel before any conversations or interviews about our news-gathering practices or related journalism issues. Also: I'm onto a big story, and need to go off the radar for a bit."

WikiLeaks says Michael Hastings Contacted it Just Before his Death

June 19, 2013

<http://blogs.telegraph.co.uk/news/timstanley/100222652/wikileaks-says>

Michael Hastings contacted WikiLeaks lawyer Jennifer Robinson just a few hours before he died, saying that the FBI was investigating him.

Witness: Hastings' Speeding Car 'Shook my Car like a Freight Truck Going By'

June 21, 2013

<http://news.yahoo.com/blogs/lookout/hastings-crash-witness-113514329.html>

I was stopped at the light at Santa Monica [Boulevard], headed south on Highland [Avenue]. I looked down to turn my radio down, and this car just blasted past me through the red light—it shook my car. No telling how fast the driver was going.

Journalist Michael Hastings Dies in L.A. Car Crash

June 18, 2013

<http://www.latimes.com/local/lanow/la-me-ln-michael-hastings-dies>

Hastings was the victim of a single-car crash that occurred about 4:25 a.m. in the 600 block of North Highland Avenue. The vehicle crossed a median, struck a tree and burst into flames in the Hancock Park area, LAPD Officer Christopher No said. A witness described the accident to KTLA News: "I was just coming northbound on Highland and I seen a car, like, going really fast and all of a sudden I seen it jackknife. I just seen parts fly everywhere, and I slammed on my brakes and stopped and tried to call 911."

Why do Some Cars Burst into Flames?

<http://www.accidentreconstruction.com/newsletter/oct06/flames.pdf>

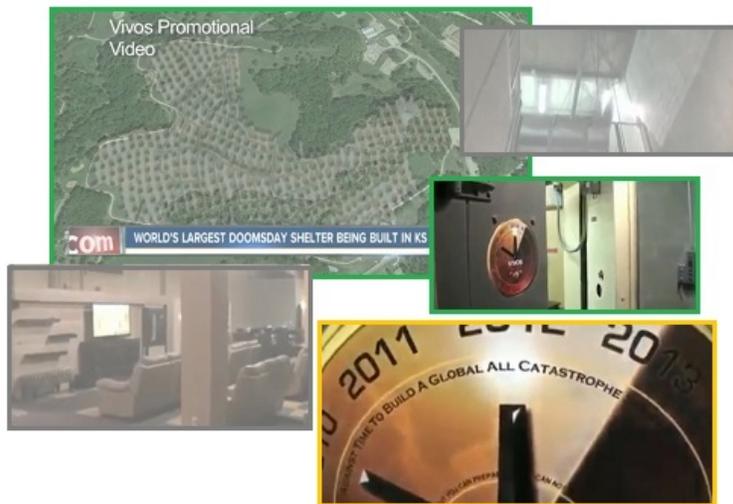

Much of the reason for a car fire has to do with where a vehicle is hit during a collision and if the gas tank is near the point of impact. A side impact is more likely to rupture a gas tank than from the front or behind. Newer cars (often) have the gas tank under the rear seat.

ZetaTalk [Comment](#) 6/22/2013: *Hastings was murdered, an end he frankly expected at some point due to his aggressive investigative reporting. He received a warning, and thus at an odd hour was trying to change locations, fleeing. His car had been tampered with so the car would accelerate and then torque sideways to crash or flip, timed to be accompanied by a bomb that caused his fiery death. What was he working on that his death was arranged at this time? Given his track record, he was unlikely to back away from the inside stories on the cover-up over Nibiru. He was thus silenced before the stories could break.*

Atkinson Bunker

Anticipating Obama's announcement admitting the presence of Nibiru, aka Planet X, developers are positioning themselves to reap the benefits of panic in the people. Need a Pole Shift shelter? Come to Atkinson, Kansas where you can play golf and water sports while you wait for the worst! After all, per the developer, it is this bunker and others like it

that will save mankind from destruction!

Human Race Depends on World's Largest Doomsday RV Park in Kansas

June 20, 2013

<http://www.rawstory.com/rs/2013/06/20/developer-human-race-depends>

The resort will include a bowling alley, a swimming pool with water slide, underground golf, archery, paintball, tennis and skateboard park and more.

Underground Doomsday Shelter to Open near Atchison, Kansas

June 18, 2013

<http://www.kshb.com/dpp/news/state/kansas/underground-doomsday-shelter>

The cave will have room for 5,000 people living in up to 1,500 RVs. Customers will buy a spot and pay \$1,000 per lineal foot of their vehicle. A 25-foot-long RV would cost \$25,000 plus a \$1,500 charge per person to pay for a year's worth of provided food and toiletries. Construction begins in late August with the first phase of construction done by November. Vicino's \$25 million in renovations could be completely finished within a year.

Kansas Town Builds 2 Million SQ. Foot Underground Survival "Resort" To Prepare For End of World

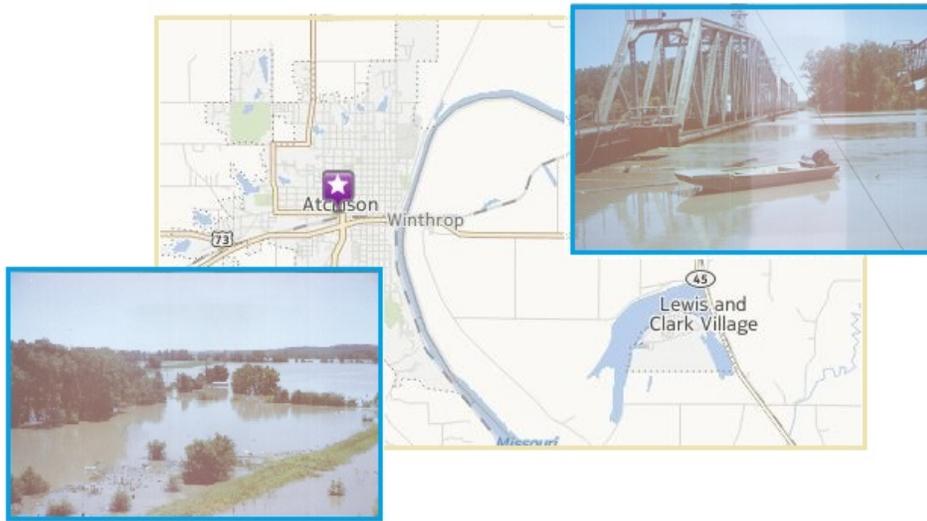

June 20, 2013

<http://beforeitsnews.com/alternative/2013/06/kansas-town-builds-2-million-sq-foot>

Act now and you can reserve your spot in the Vivos Group "Ark" to wait out the end times. What is this mysterious "Ark"? Why it's no less than a private, underground, bomb shelter being built in a former US military bunker near Atchison, Kansas! Apparently Vivos Group is a company that builds individual bomb shelter-like structures in people's back yards, but now they want to take their idea to the next level by building a larger underground community for an unknown number of families in the abandoned military installation in Kansas 50 miles northwest from Kansas City, Missouri.

Priced to appeal to middle class families, this shelter overlooks several key points - the bunker is likely to be flooded during the Pole Shift, and underground bunkers may trap those inside, in this case likely in a watery tomb. Atchison is 814 feet above sea level,

which is sufficient to avoid being under water when the sea level rises within two years after the Pole Shift to 675 feet above sea level. But Atchison is right on the great Missouri River which has a history of flooding even during *normal* times.

Atchison, KS Anticipates Flooding

June 27, 2011

http://stjoechannel.com/fulltext/?nxd_id=208977#sthash.sP4d2LVI.dpuf

With river levels topping 30 feet in Atchison, the city is taking extra steps to protect its infrastructure.

Officials Warn Flooding Threat Comparable to the Flood of 1993

June 13, 2010

http://www.kshb.com/dpp/news/region_missouri/northland/officials-warn

The Missouri River is expected to exceed the flood stage in the Kansas City area. The threat is comparable to the flood of 1993. The major area of concern lies between Rulo, Nebraska and Atchison, Kansas.

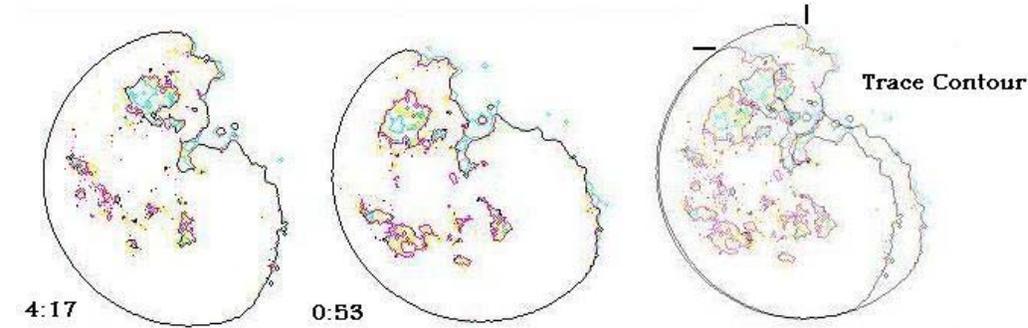

The Zetas have warned that rivers will be unable to drain during the torrential rains that will accompany the hour of the Pole Shift. They recommend being 200 feet above a river bottom for Pole Shift safety. The Atkinson developer forgot to mention – is his bunker *waterproof*?

ZetaTalk Warning 12/8/2010: *Take away the ability of the wide Mississippi to drain the Missouri River, and what would a flooded Missouri become? A lake, spreading out over the nearby lands, creeping into every low lying piece of land the fingers of the spreading waters could find.*

ZetaTalk Advice 9/11/2010: *We have stated that all rivers will be over their banks, so the worst possible scenario should be assumed. What will happen if the river cannot drain? Despite having a good sea level elevation, any land that does not have an advantage of being at least 200 feet in elevation over a major river bottom in the vicinity is likely to be flooded. A backwash from the main river in your vicinity should be assumed, so that creeks will not drain, for instance. Water on the move tears and bites and scours, and will undercut the soil under buildings so they will tilt and tumble. Being on solid rock that will not melt in this scenario is advised.*

Moon Torque

The Moon began to have a strongly tilted orbit around the Earth after Planet X arrived in the vicinity in 2003. This was noted by 2005, where a strong rotation in the face could be seen over only a few hours, as noted in this 2005 presentation.

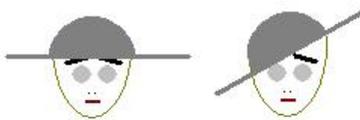

Moon Extremes, a Year in Review

<http://www.zetatalk.com/index/lou0329.htm>

Moon FACTS are that the Moon will appear to be upside down if viewed from the S. Pole vs the N. Pole, and every change in latitude skews this view. But the view for any given latitude should vary only by 7° 7 minutes, a movement called Lunar Libration, equivalent to the hour hand of a clock moving a mere 1/2 hour. The rotation of the Moon's face during a lunar night moved from a reported 45° on Mar 7, 2004 to 60° by July 31, 2004 to 95° by Sep 26, 2004 and for real drama, see that animation of the 95° turn. This Netherlands Feb 27, 2005 photo covering a mere 3 hours shows an almost 30° turn.

Per the Zetas, the Moon has assumed a highly tilted orbit, to evade the intense particle flows returning to the Earth at her Ecliptic.

ZetaTalk [Explanation](#) 3/11/2005: *The Moon, as a bead on the edge of the hat rim traveling around the hat, is seen in the extreme North during one part of the month, and at the extreme South two weeks later. Why? A turmoil, mostly present at the Ecliptic, which the Moon normally rides. The easy out for the Moon is to avoid the crowded lane, which it does by being too high, and then too low, for the majority of its orbit.*

Posted recently on the Pole Shift ning blog for [Moon Watchers](#), is a recent capture of this strong tilt. Photos in this Daily Mail article show the face of the Full Moon rotating greater than 7° 7 minutes. A part of the face points to 7 o'clock over NYC and then to 4 o'clock over NJ, virtually at the same location. This is an 85° turn from essentially the same latitude and during the night during the same time period!

It's a Bird, it's a Plane, it's Supermoon!

June 23, 2013

<http://www.dailymail.co.uk/news/article-2346857/Supermoon-June-2013>

The biggest and brightest full moon of the year graces the sky today as our celestial neighbor swings closer to Earth than usual. The supermoon will appear 14 percent larger and 30 per cent brighter than normal - the outcome of a cosmic quirk as the moon orbits within about 222,000 miles (357,000 kilometers) of our planet.

This is not the only such post! A slideshow on the [HuffingtonPost](#) shows over 100 examples. Why are the photos from Florida so different from Dallas or Istanbul, for instance, where approximately at the same latitude.

Media Awareness

If the announcement was an open secret, known to members of the media, was there any indication that they knew? It was clear since mid-March that the press had been tipped off as to the pending announcement. Jokes about Obama's golf weekend carried a double meaning.

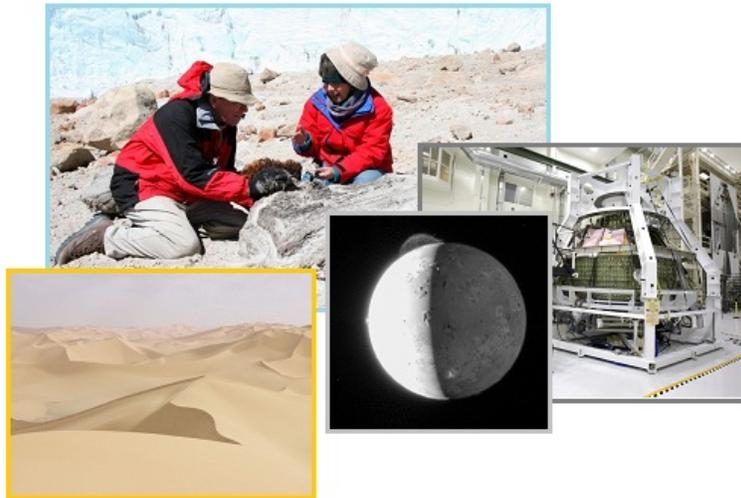

Read President Obama's Remarks at the Gridiron Dinner
March 10, 2013

<http://www.washingtonpost.com/blogs/the-fix/wp/2013/03/10/>

As I was saying, we face major challenges. And don't worry — there is an entire team in the situation room as we speak, planning my next golf outing, right now at this moment.

ZetaTalk Insight 3/16/2013: *For those in the know, and recently brought into that circle via private luncheons with Obama, it carried a different meaning. He is encouraging those in the know to be open and relaxed about the forthcoming announcement. Focus groups had shown that the cover-up had been so effective that people would think the truth a hoax. Part of the pre-announcement public relations has been to start chatter, so that at least those in the media would take the announcement seriously, and not fear to present the truth to the public.*

If the media was tipped off, have they been doing their research, and preparing for their initial coverage post-announcement? A month later, on April 5, 2013, the headlines selected for Yahoo News showed an odd skew. If Earth is experiencing tugging causing an increase in volcanism, Yahoo featured a science article about changed volcanism on Io. Then an article about sudden climate change 6,000 years ago – wetlands to desert – and another about rapidly melting glaciers, also in the last 6,000 years, and a focus on NASA's sudden desire to lasso an asteroid. The focus was unusual. The Zetas explain.

Volcanoes on Jupiter's Moon Io Are All Wrong, NASA Says
April 5, 2013

<http://news.yahoo.com/volcanoes-jupiters-moon-io-wrong-nasa-says-201924196.html>

Io's major volcanic activity is concentrated 30 to 60 degrees farther east than models of its internal heat profile predict. This intense activity is ultimately generated by gravitational tugs from Jupiter, with an assist from the nearby moons Europa and Ganymede.

Sahara Went from Green to Desert in a Flash
April 5, 2013

<http://news.yahoo.com/sahara-went-green-desert-flash-201202231.html>

From lakes and grasslands with hippos and giraffes to a vast desert, North Africa's sudden geographical transformation 5,000 years ago was one of the planet's most dramatic climate shifts.

Why 1600 Years of Ice Melting in 25 Years is a Bad Omen

April 5, 2013

<http://news.yahoo.com/why-1-600-years-ice-melting-25-years-180000961.html>

A glacier in Peru has melted to levels not seen since the end of the last ice age. Ice that took 1,600 years to form in the Peruvian Andes took only 25 years to disappear.

Senator: NASA to Lasso Asteroid, Bring it Closer

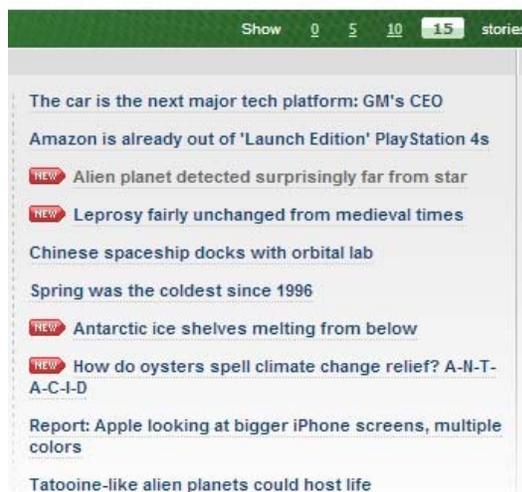

April 5, 2013

<http://news.yahoo.com/senator-nasa-lasso-asteroid-bring-closer-201523624.html>

NASA is planning for a robotic spaceship to lasso a small asteroid and park it near the moon for astronauts to explore.

ZetaTalk Comment 4/13/2013: *The decision on what to place in the Yahoo News list is done by a person, or group of persons, so the trends you are noticing show their concerns and obsessions. Whether aware of Planet X nearby, and the cover-up, or just suspecting that the public is being handed lies by the establishment, those making choices for Yahoo News are focused on the symptoms of the pending passage and the likely culprit in the cover-up – NASA. As we noted in the April 6, 2013 chat, the Earth wobble has pulled East due to Planet X moving to the right of the Earth, and lo and behold Jupiter's moon Io has volcanic activity pulling East too. If fireballs and bolides and near-miss asteroids are on the increase, what meaning is there in NASA wanting to lasso an asteroid? To experiment and see what it takes to kill one? The mission seems nonsensical, like much of NASA's pronouncements. Some hidden agenda is suspected. And the terraforming that Climate Change is effecting is always an obsession because it is a trend that will impact the lives of all.*

A month later in June the Tech section of NBC news also seemed aware of the pending announcement. The Zetas explain that editorial staff have been exploring ZetaTalk, often for the first time.

The top stories in the Tech section of NBC News today seemed to be pointing to the

eventual announcement like the cluster of stories on Yahoo.com in April. Unlike the last collection, however, these seem to be pointing directly at various talking points found only on ZetaTalk; the long orbits of some planets, the Arctic ice melting from the bottom, referencing Tatooine, the red star in Star Wars, mentioning the abnormally cold spring this year as the Zetas predicted, and even throwing in a climate change study on oysters.

ZetaTalk Insight 6/15/2013: *As we mentioned in April, someone on the editorial desk at Yahoo News heard the rumors about the coming announcement, and was highly suspicious that NASA had been at the helm of a massive cover-up about Nibiru. This individual at Yahoo is not alone, as the buzz is out in the media. Many have now explored ZetaTalk for the first time and their fascination with the broad range of issues covered within the body of ZetaTalk shows. The visible Second Sun (Tatooine) covered for a decade within ZetaTalk, the true cause of the melting Arctic ice, and other signs of the Earth wobble such as the erratic weather have caught their eye. If they cannot yet provide ZetaTalk for their readership, they can stir curiosity by mentioning these issues.*

Some of these articles then appeared in the UK's Daily Mail, an atypical mix for this paper.

The Planet that Shouldn't Exist: Hubble Discovers New Mass

June 15, 2013

<http://www.dailymail.co.uk/news/article-2342471/The-planet-shouldnt-exist-Hubble>

Astronomers using NASA's Hubble Space Telescope say they have discovered evidence of a planet forming 7.5 billion miles away from its host star - about twice the distance Pluto is from our Sun.

Star Wars-Style Planets with Two Suns are More Capable of Housing Alien Life

June 14, 2013

<http://www.dailymail.co.uk/sciencetech/article-2341769/Star-Wars-style-planets-TWO-SUNS>

Stars 80 per cent as big as the sun, if close enough together, could increase the chances of being able to sustain life.

ZetaTalk Insight 6/15/2013: *For the Daily Mail to feature two such articles on virtually the same day shows a sudden awareness in the editorial staff. Planet X does indeed orbit two suns during its long sling orbit, but asserting its existence and reporting the ancient Sumerian texts describing this 3,600 year orbit is not yet kosher. So the article on life-*

bearing planets orbiting twin suns must suffice. Likewise Hubble discoveries wherein the incident of life-bearing planets is likely to be greater than anticipated. Planets that form in odd places. Planets at a distance from their suns, subject to the cold light of space during their sojourns. If this also sounds like Planet X, aka Nibiru, it is no coincidence. The subject is much on editorial minds these days!
