

How to Make a Tornado Survival Kit

The chances of surviving a **tornado** are higher than most people think. With a nice kit ready, you will be more prepared.

Steps

- 1 Find a medium-sized container (preferably plastic to seal out moisture/bugs) that is able to hold at least two small blankets.**
- 2 Purchase or find the following items:**
 - A whistle
 - A permanent marker
 - A small radio, preferably a self-powered radio
 - A flashlight, preferably a self-powered flashlight
 - A medium sized pack of batteries
 - Canned food or power bars
 - A hand-powered can opener
 - A few small plastic dishes and silverware
 - Two small blankets
 - A phone
 - A few water bottles
 - A first aid kit (Band-Aids, cloth, ect.)
 - Money (preferably small bills)
 - A car charger for your cell phone
 - Medicines
 - A spare set of keys to your vehicle and home
 - An extra change on clothes for each person
 - Anything you may need for pets
 - Anything you may need for children
 - A multipurpose/knife.
- 3 Put all of the objects into the medium-sized container.**
- 4 Put the container in the shelter/closet/safe room where you will be if there is a tornado warning.**
- 5 Store bicycle helmets and sneakers in the shelter for each person.**
- 6 Store your document safely in the (interior) shelter, along with a recent copy of one of your utility bills. If your neighborhood is wiped out, you'll need to prove to authorities that you live there.**

Community Q&A

W! **o** I need all these things for a tornado?

wikiHow
Contributor

Some these items will help you during a tornado. The other items will help you after the tornado, especially if there is a power outage, or if you are stuck at home for the next few days.

Why do I need a car charger during a tornado?

wikiHow Contributor

It's more for after the tornado, because there will likely be no electrical power. It provides you the ability to charge your phone from a car using battery power rather than electrical power.

Where should I go during a tornado?

wikiHow Contributor

If possible, go to a basement. If you cannot get to a basement, go to a hallway, closet or room without windows.

Won't the canned food need to be cooked?

wikiHow Contributor

No, canned food is ready to eat. It commonly gets heated up for taste, but it isn't necessary.

Why do I need a helmet?

wikiHow Contributor

A helmet can help protect your head from flying debris. If it has a visor, it can also protect your eyes.

How does the knife help me when I am in a tornado?

wikiHow Contributor

A knife is an all-purpose utility tool. It can be used to open cans, eat food, cut wood, cut your way out of something, cut twine/rope, dig a hole and more.

What food should I not put in the pack?

wikiHow Contributor

Do not add junk food. Such food won't give you the nutritional value you need and will take up space that could and should be used for healthier foods.

What do I do if I don't have canned food?

wikiHow Contributor

Pack your survival kit with anything non-perishable. For example, you could throw in trail mix, peanut butter, protein bars, or dried fruits and vegetables. Anything that won't spoil without refrigeration is good. Of course, the idea behind preparing a tornado survival kit is to do it well in advance, so you have time now to go out and get canned food if you want.

What if I am at school?

wikiHow Contributor

Follow instructions from your teacher to the letter! She/he will guide you to safe areas. Duck into bathrooms away from windows, stay in interior hallways away from windows, get out of the gym and swimming pool immediately according to your teacher's commands. Crouch down with your head against the wall, lace your fingers together, and place them on the back of your neck where the soft spot is.

Why do I need batteries?

wikiHow Contributor

Batteries can be used to power radios, flashlights, and lanterns -- all things needed for immediate survival if a storm leaves you without power. You can also get an emergency battery powered cell phone charger.

Tips

- If you are trapped under debris, use the whistle to signal for help.
- If the sky looks a greenish or orangey color, get everything together and head to a place of shelter at ONCE. The greenish color often means hail, and the orangey color is a sign of dust being kicked up by strong winds in the storm. Note: On the Eastern plains of Colorado, if the clouds have a blue tinge, feel safe, but a brown tinge is a sign that a swirling effect is present (e.g. tornado) and dirt is getting sucked up into the clouds. The Eastern plains are farming country and high desert - brown dirt - so if your dirt from the ground has a hint in the clouds, watch out. Hail clues are a dense white apron from cloud to earth (often mistaken for a low hanging cloud) and a rapid drop in temperature.
- If you have more than 4 people in your family then you might want to bring more blankets.
- The reason that you purchase self-powered radios, self-powered flashlights and light sticks is that batteries will run down and you may not be able to find replacements locally. The lights and light sticks are for use instead of candles, since an open flame or spark often triggers an explosion and fire, complicating matters *even worse*. There is a *TV* out that is self powered as well. The radios allow you to listen to the news, and have entertainment as well. When the power cell dies you simply crank the radio according to manufacturer's instructions and/or place it in the sun if the device is also solar powered.
- Know in advance how to turn off the water and gas to your house and keep the needed tools (wrench, etc.) in your emergency supply kit.
- Write the name of each person on the skin with a permanent marker in case you are injured or unconscious.
- Make sure that everyone takes or wears tennis shoes or boots. If you have to kick your way out or crawl through debris, it will be difficult barefoot.
- Glowsticks in place of candles can be safer, since they are not a fire hazard.
- Keep an eye on the weather, if it seems like there will be a severe storm, prepare.
- Check the weather forecasts to find out if a high risk of severe weather is mentioned for your area. Your local National Weather Service office is responsible for issuing Hazardous Weather Outlooks (HWOs) for the local area around you. These are often the first mentions of severe weather risk, and often a couple days in advance. If severe weather is occurring locally, the NWS office assigned to your area will issue warnings for these storms. The Storm Prediction Center is responsible for issuing weather watches.

Warnings

- Many towns and cities in high tornado risk areas have Outdoor Warning Sirens. Be familiar with what their signals mean, and know where to seek shelter and what to do when they sound.
- Never wait until the last minute to prepare for a tornado.
- Tornadoes are often deadly. Proper shelter will increase your chances of survival, and lessens the risk of serious injury.

Things You'll Need

- Small container or a tub

- Small radio, (preferably self powered)
- Flashlight, (preferably self powered)
- Medium sized pack of batteries
- Glowsticks
- Non-perishable food
- Plastic bags
- Manual can opener
- A few small plastic dishes and silverware
- Two small blankets
- Pet food (if pets are present)
- Enough water to last two weeks
- Extra shoes and clothing
- Things to do for the kids
